

Workshop Chamonix XIV

Contribution ID: 63

Type: **not specified**

BDI

Monday, 17 January 2005 11:40 (20 minutes)

It is clear that proper functioning of the beam instrumentation is vital to effective commissioning. How the key instrumentation is to be commissioned is described including a description of measurements and tests to be performed with beam during the various commissioning phases. The demands on other systems [controls] are clearly stipulated. The procedures to be followed to ensure proper preparation and pre-testing are also outlined.
