What is the Future of the Experimental Areas?

Thursday 13 January 2005 11:40 (20 minutes)

The present layout, capabilities and performance of the CERN fixed target experimental areas are described, in particular the North and East areas, nTOF, Isolde and the AD. The future possibilities and known modifications will be outlined, taking into account the expected evolution of the accelerator performance and the recommendations from the Villars meeting of the SPSC. Consolidation requests as well as possible adaptations to new suggested experiments or requirements will be presented.
