The Integrated Digital Conferencing Project (InDiCo)

Monday 4 November 2002 09:30 (30 minutes)

Report on a project to develop and implement an integrated software platform to serve as information sharing and exchange environment for multimedia documents. The aim of the project is to implement and test new services specific to conference multimedia production and archival; develop new tools and techniques to extend the available facilities with multimedia indexing and browsing; build a complete conference management system on top of the agenda software used in HEP; integrate these new modules in an existing platform for digital publishing that has already been developed and tested in a previous IST project (see torii and TIPS).
