K. Zioutas
Conclusions

• Congratulations to the TPC group for the data they have taken and which must be analyzed.

• This meeting was mainly devoted to the shut down period, December/January. There is a lot of work to be done and the available time is very tight. Therefore different works have to be done in parallel.

• We decided to start warming up the magnet already by November 27th 2002, at 10.00am. In parallel, Giovanna and Heinrich (following a discussion we had Monday after the meeting) will prepare the measurements concerning the cleanness of the magnet pipes. The outcome of this will determine the rest of the work. The magnet may not be contaminated and there is not necessarily contradiction between the 2 independent measurements.

• Martyn Davenport has already started as our new technical coordinator. We are in the phase to get informed about our experiment. Every one of us, who has some specific work to be done here at CERN, should contact Martyn. “Good luck Martyn with your work.”

• Nikolai is here at least for the next 2 weeks, so that he can be of big help during this phase.

• We need a technician from a home institute. We expect for some suggestion. We also need more senior physicist to be here at CERN, in order to supervise the different works.

• The 14th Collaboration meeting will be held at CERN, 24th January 2003 (a Friday).
