

Search for $\tau \rightarrow \mu/e \gamma$

Friday 31 July 2009 14:00 (20 minutes)

We present a search for the non-conservation of lepton flavor in the decay $\tau \rightarrow \mu/e \gamma$ performed with 967 M τ decays from e^+e^- annihilations collected by the BABAR detector at the PEP-II storage ring at a center-of-mass energy corresponding to $Y(2S)$, $Y(3S)$ and $Y(4S)$ resonances.
