Review of D10.3

R. Medina

LIMOS – CNRS Université Blaise Pascal

WP10

CERN, April 15th 2003

What are the priorities for WP10 ?

- I missed several episodes, but…
- Do we really need to show again Frascati's slides ?
- We need MPI
- We need security
- Did I say we need MPI ?
- Interactivity
- We need robustness, scalability
- Reminder: we need MPI, Security
- Application metadata
- More recent version of Linux… (at least 8.0)

What is satisfied in release 2.0 ?

- MPI
- Interactivity

What should be done in 2.1 ?

- I had a dream : the Grid was secure
- We really need scalability and robustness
- Comprehensive grid-security implementation
- Posix like file access over the Grid
- Better support for application metadata (e.g. user defined fields associated to the LFN)
- Programmable APIs
- Need a variety of more recent version of Linux
- Automatic replication
- Did I say MPI ?
