Steve Fisher / RAL

4/4/2003

<s.m.fisher@rl.ac.uk>

Other tools

- We might benefit from a code coverage tool (for coverage of tests)
- Jmeter might be of use for http stress testing
- Rob will demo eclipse
  - He thinks it will give productivity gain

NetLogger

- SZTAKI will get it going properly and see where the problems are.
- All should start checking performance fo their code – but it is probable that someone will be assigned to take a look.

Resilience

- Will construct a suitable resilience testing framework to see where we stand
- At the same time will fix some of the problems we know about

Quality

- We will add #ifdefs to any C/C++ code which turns out to be compiler dependent.
- Discussed designing with greater generality.
  - Consensus that we should only have the generality we need.
