# Code

- Problems
  - Unit tests are not enough
  - WP3 testbed is currently too small to find some of our problems
  - Delays in getting things installed
- Solutions
  - Unit tests are cheap – so write a lot
  - Should we go for less sites but with multiple CE and SE per site?
  - We need the resilience framework.
  - Don't introduce a major change before a previous one has been fully tested on a significant testbed.
  - Don't release code just before going on holiday

# Performance

- Problems
  - See Antony's talk
  - Must have alarms set up
  - Must be totally automatic
- Solutions
  - See Antony's talk

# Documentation

- Problems
  - How to keep it up to date
  - How to make sure it is useful
- Solutions
  - Ensure that bugs are submitted to Bugzilla

# Support / Skills

- Problems
  - Ideally we would all be experts at everything and totally interchangeable "black boxes"
  - Jacks of all trades
  - People leave, are ill, take holidays
- Solutions
  - Revisit skills matrix
