

# US Security Status

Vicky White
Computing Division, FNAL

GDB Meeting, RAL
8 July 2003

# Status

- DOE sites have agreed to interpretation that current contracts do not REQUIRE detailed registration information for non-US citizens.
  - Passport numbers or other government ID will not be required.
  - Local site rules and process may require more information than basic contact info.
  - Sites to sort out locally what is needed and to collect any additional information needed. Agreed to try for minimum additional information.

- Updates of DOE rules underway and still being drafted.
  - Early drafts would be disastrous for Grid and feedback has been given
  - Office of Science alerted to issues and engaging
  - the Science labs.
  - Several months away from knowing severity of this issue

Just a representative list – but is this the end or are we still only part-way through debugging?

- Internet 2 security efforts within the US university community are ramping up
  - Internet2 has made a release of its Shibboleth project and is working with Liberty Alliance on ideas of federating identities.
  - Active within Global Grid Forum and trying to establish a web of trust for 3rd party authentication

R-GMA: Clearly not ready for deployment
