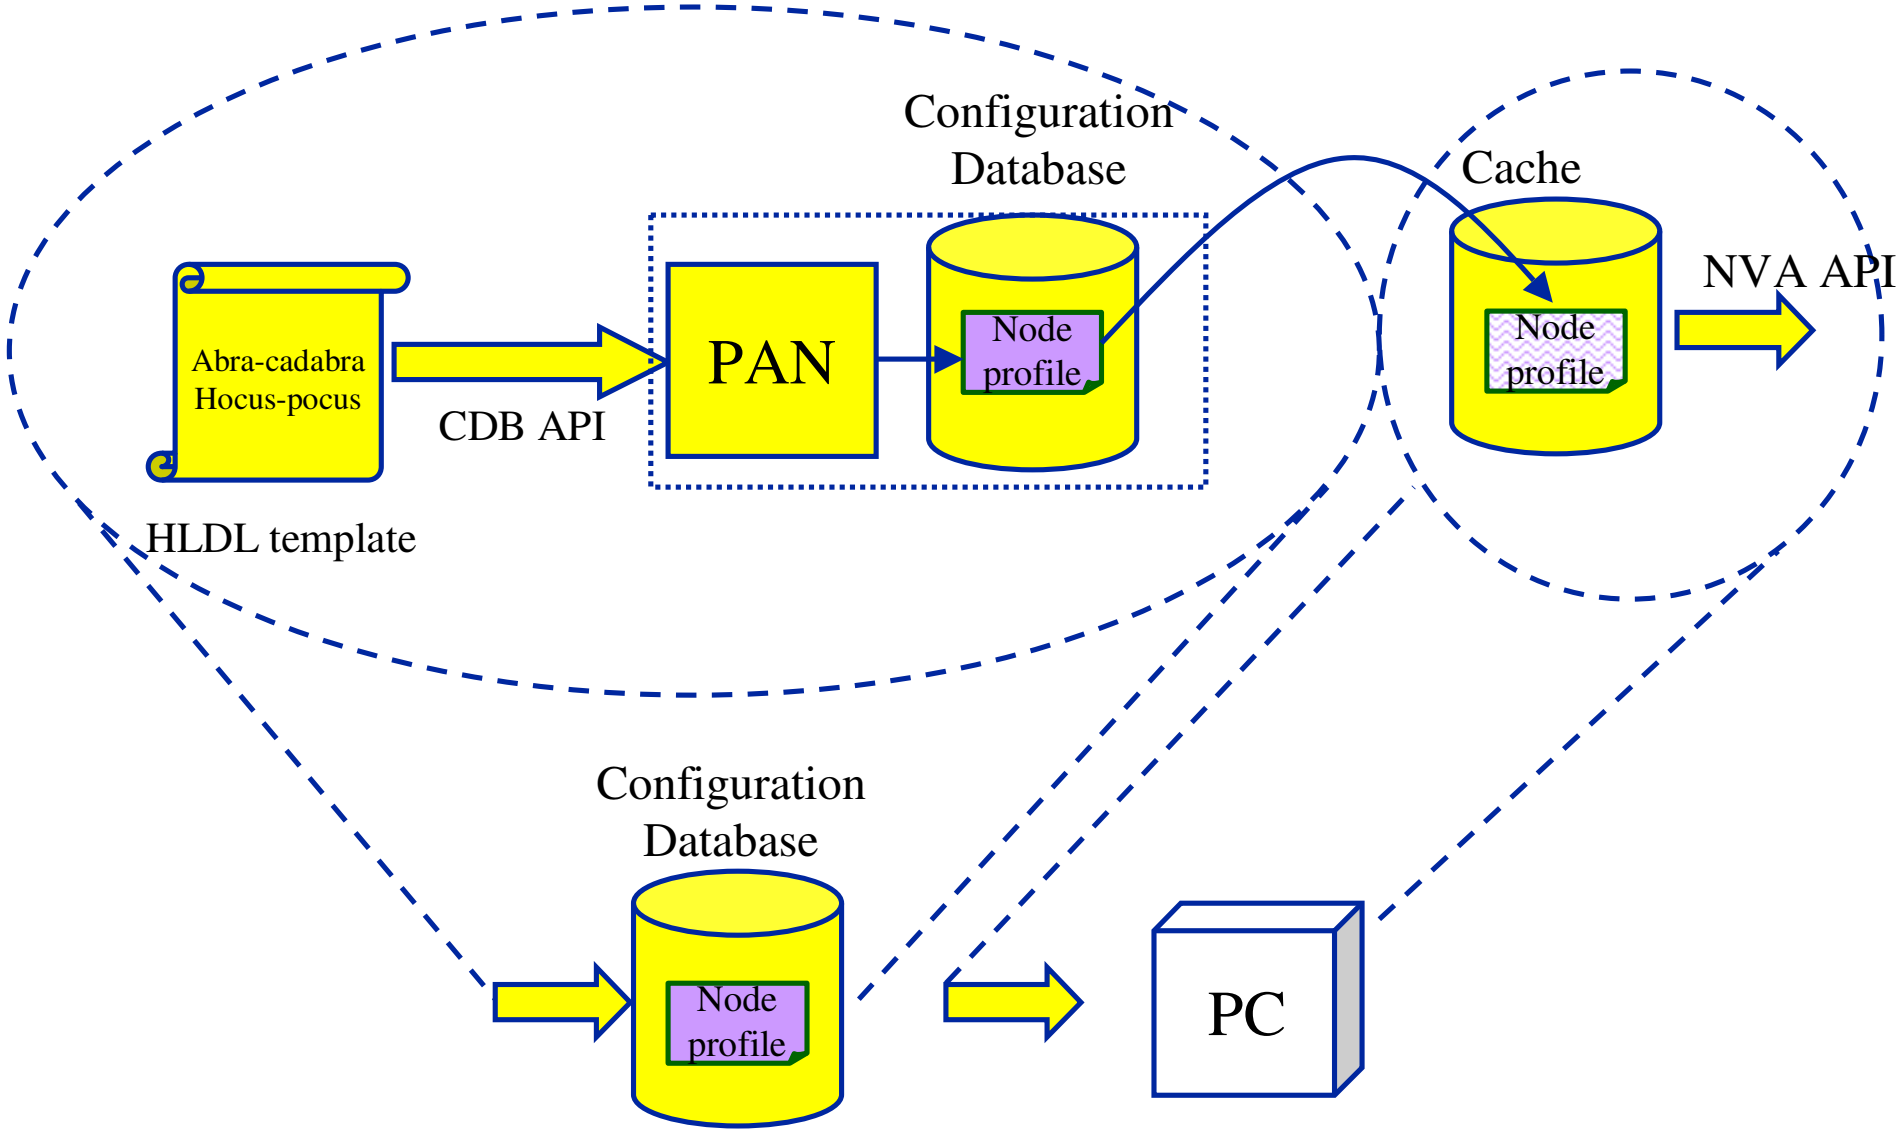
Olof vision vs reality today

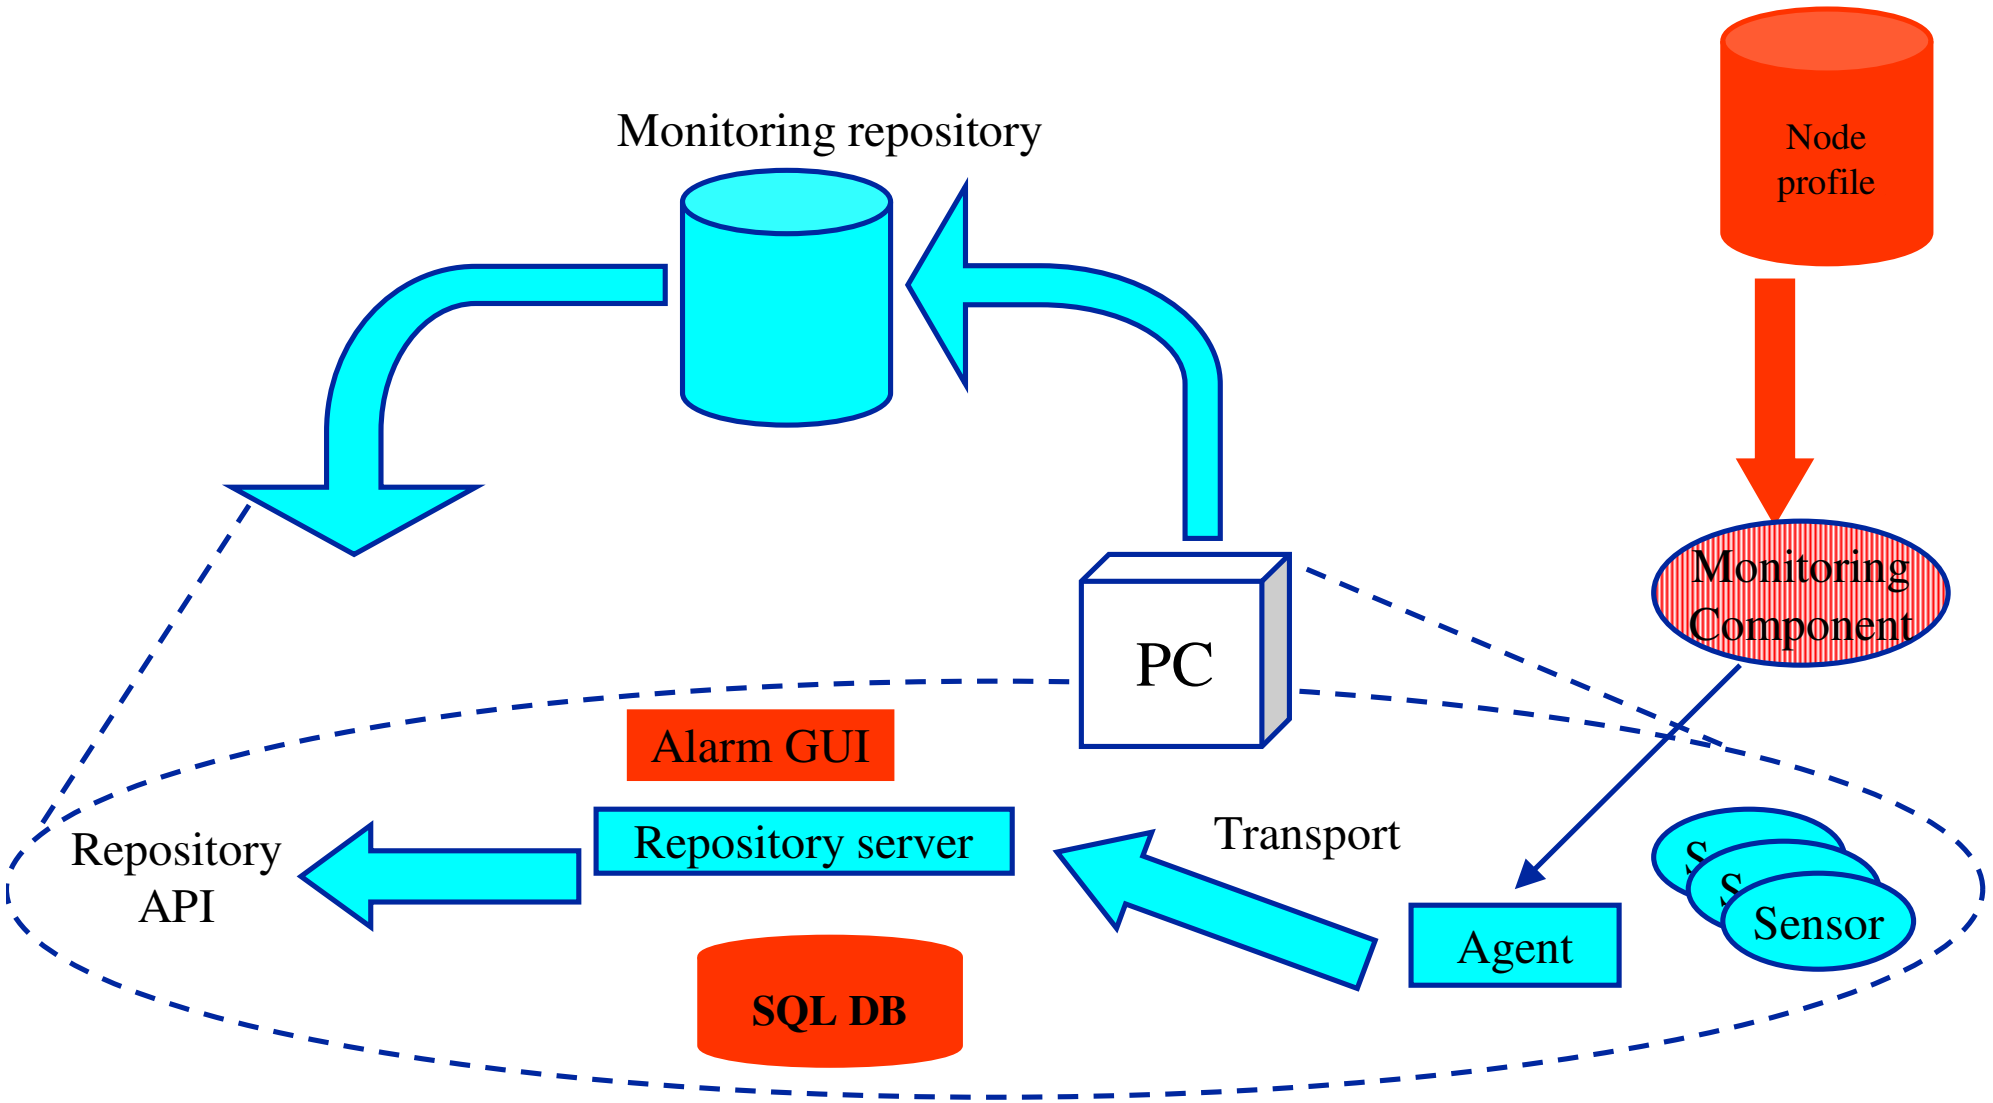
Did Olof's vision become reality?

NOTE: components not finished yet are marked in red.

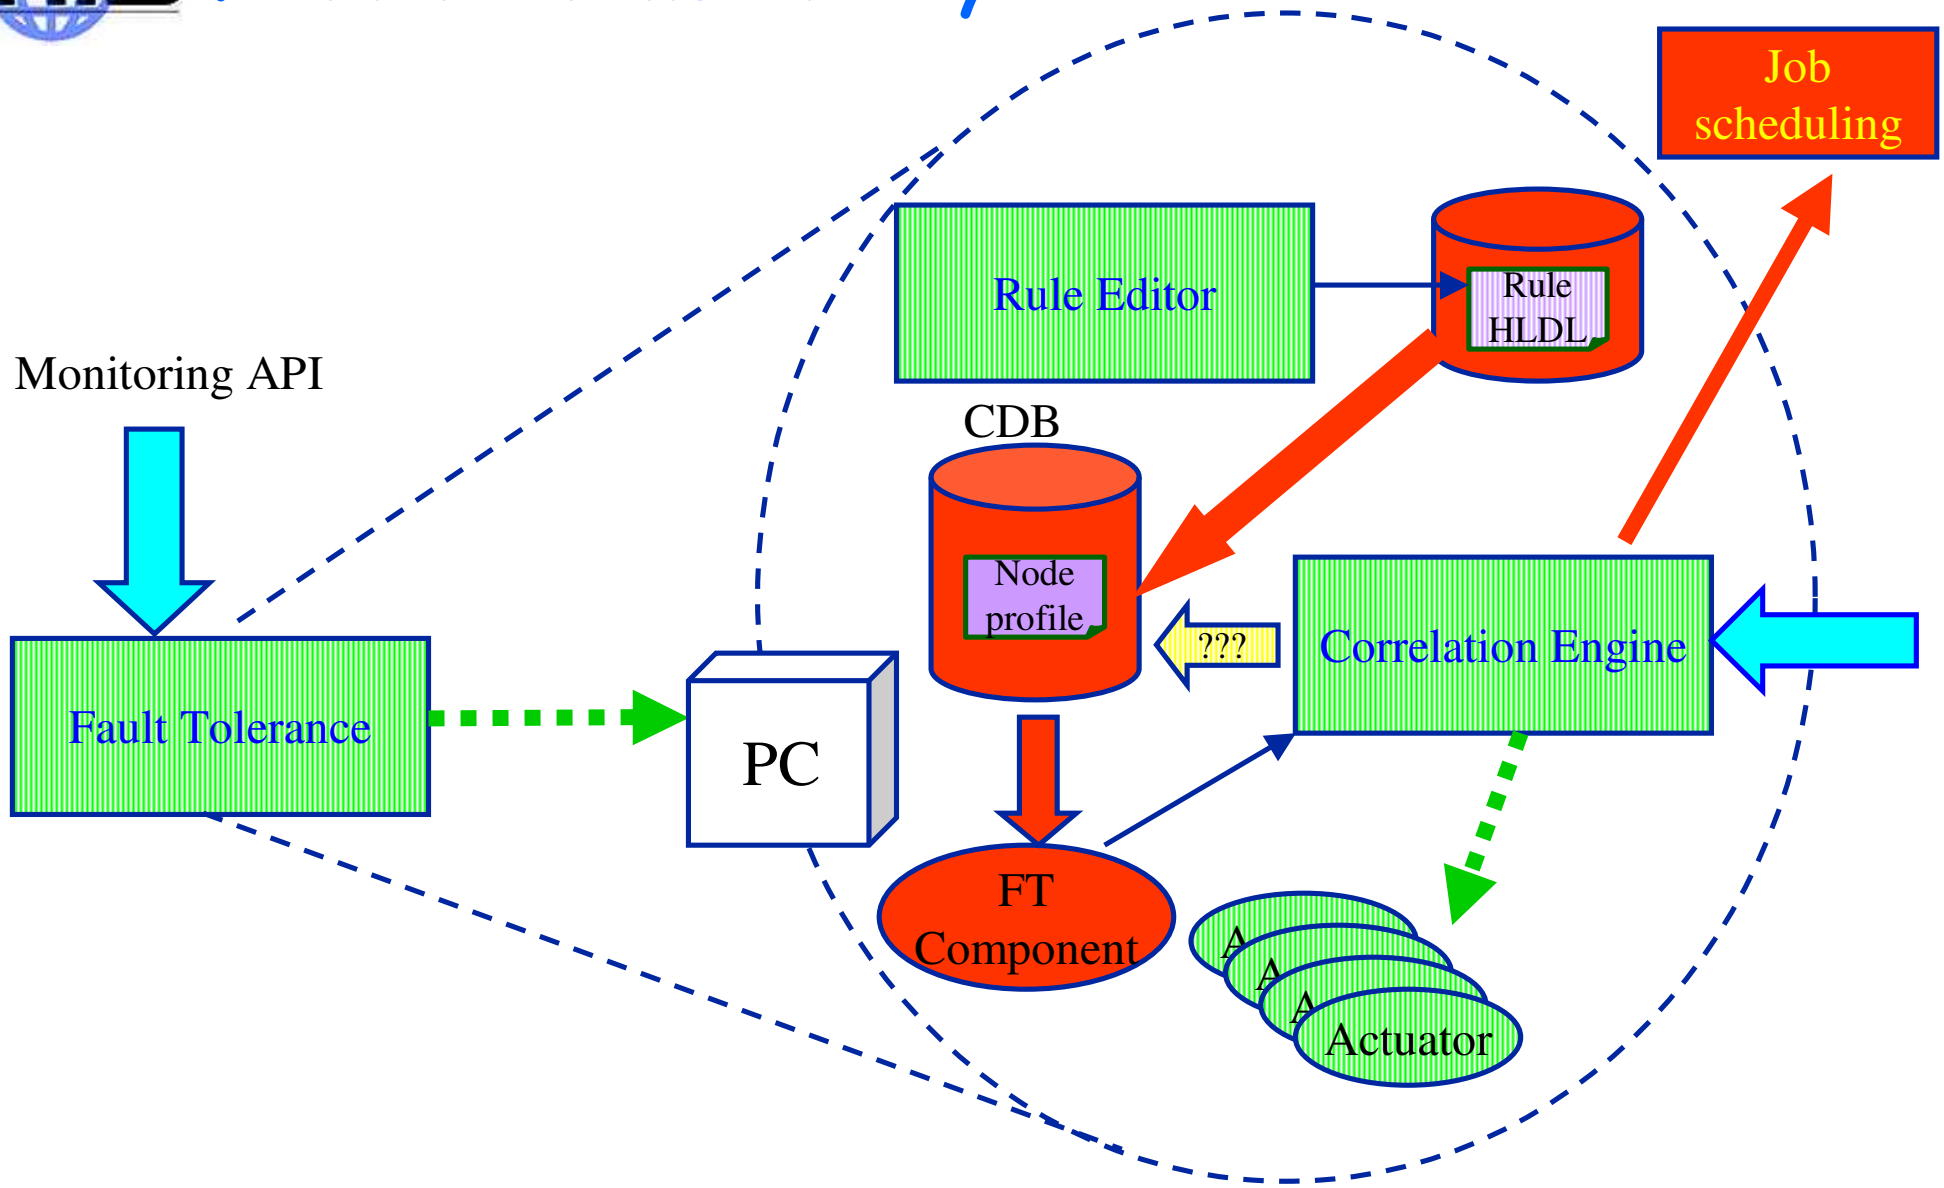
Configuration today



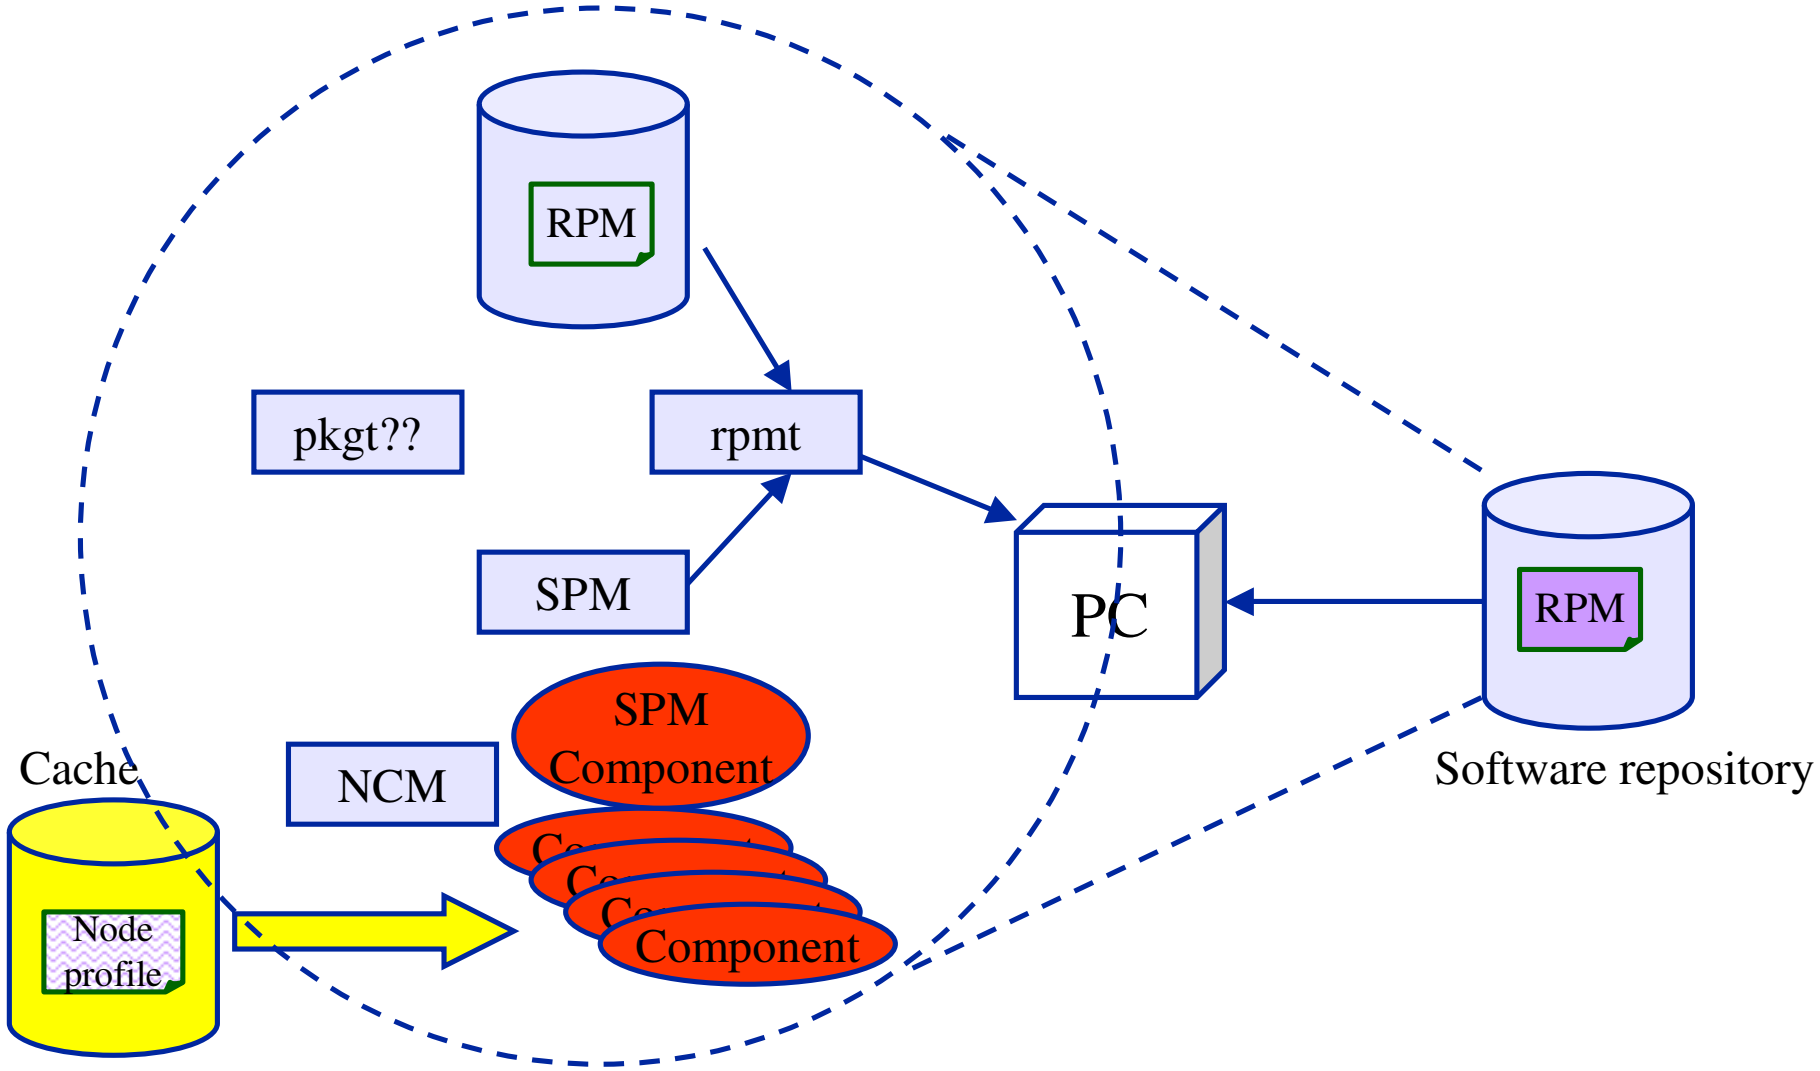
Monitoring today



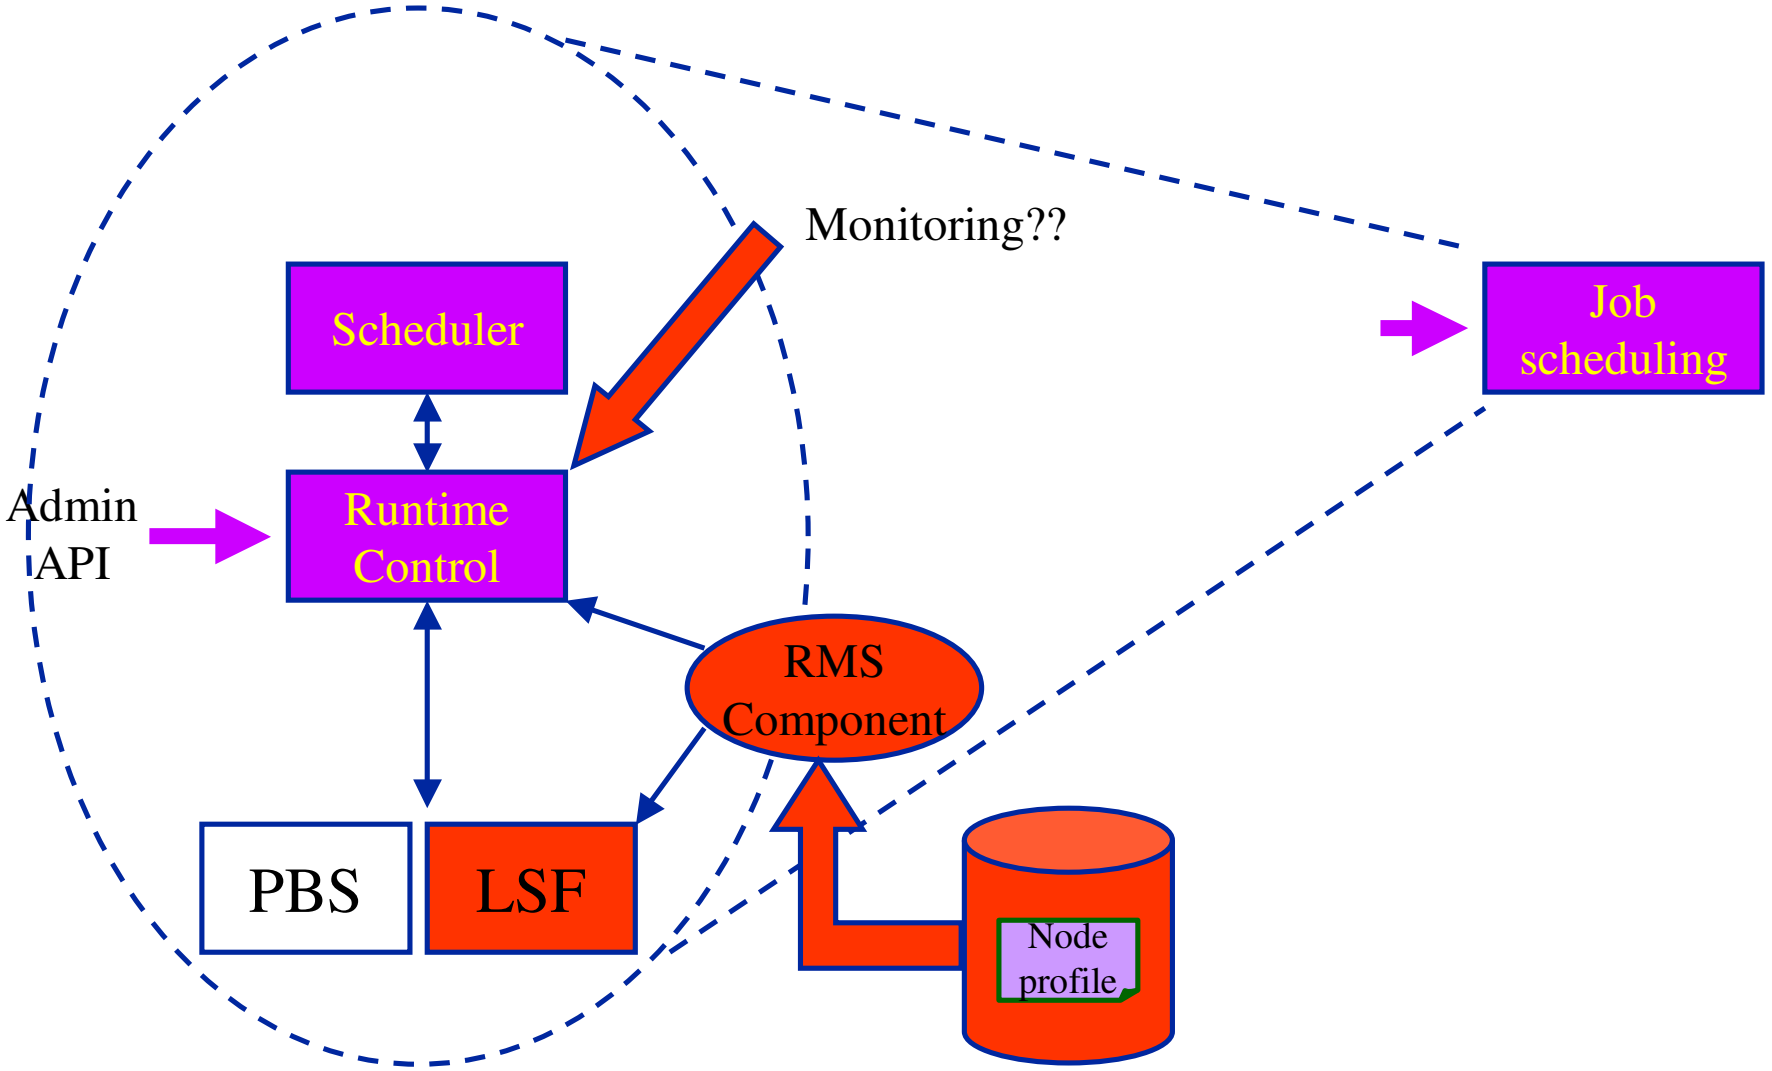
Fault tolerance today



Installation&Maintenance today



Resource mgmt today



Summary

- ✓ Good progress made in all the tasks since last workshop.
- ✓ Very good integration, support and response to bugs. CONGRATULATIONS!
- ✓ Testing plans. Keep on updating them regularly
- ✓ Priorities for coming months:
  1) Continue support of released components
  2) Finish developments and LCFGng components
  3) Testing (use WP4 nodes), documentation
  4) Prepare integration
  5) Translate configuration and components to use the new configuration and installation framework

DISCUSSION: What happens to EDG software after the lifetime of EDG?

- GOAL: finding a single strategy that can be deployed independently of whether related projects (EGEE, LCG) will take over EDG software or not
- EDG license allows anybody to use EDG software and further develop it as long as EDG is appropriately credited. This model allows other projects to take over EDG software
- There was consensus that no separate body should be put in place to continue branding EDG.
- PROPOSAL: to make EDG software publicly available in well known software repositories such as sourceforge.
- EDG license guarantees source code distribution and re-use, EDG design can only be protected by patenting. It is too late for this.
