About Conferences in HEP

March 93

<http://marcal1.in2p3.fr/WWW/conf.html>

- ☞ Conf web sites do not survive
- ☞ 5,493 HEP related conferences since 2000

Average of

→ **100 confs/month**

☞ Eg. next June

<http://cdsweb.cern.ch/search.py?p=Jun+2004&c=Conference+Announcements&rg=200>

INDICO, an European Project

Issues recognized by European Commission who finance InDiCo:

- ☉ Long term archiving of meetings material
- ☉ Enlarging access to scientific conference content
- ☉ Integrating multimedia into conference web archives
- ☉ Reducing conference organization cost

The European Solution for managing and saving conference content in long term

INDICO Project Resources

☉ 26 people involved

About 13 full time

☉ 2 years project :

From May 2002 to end April 2004

☉ 2.4 M CHF invested

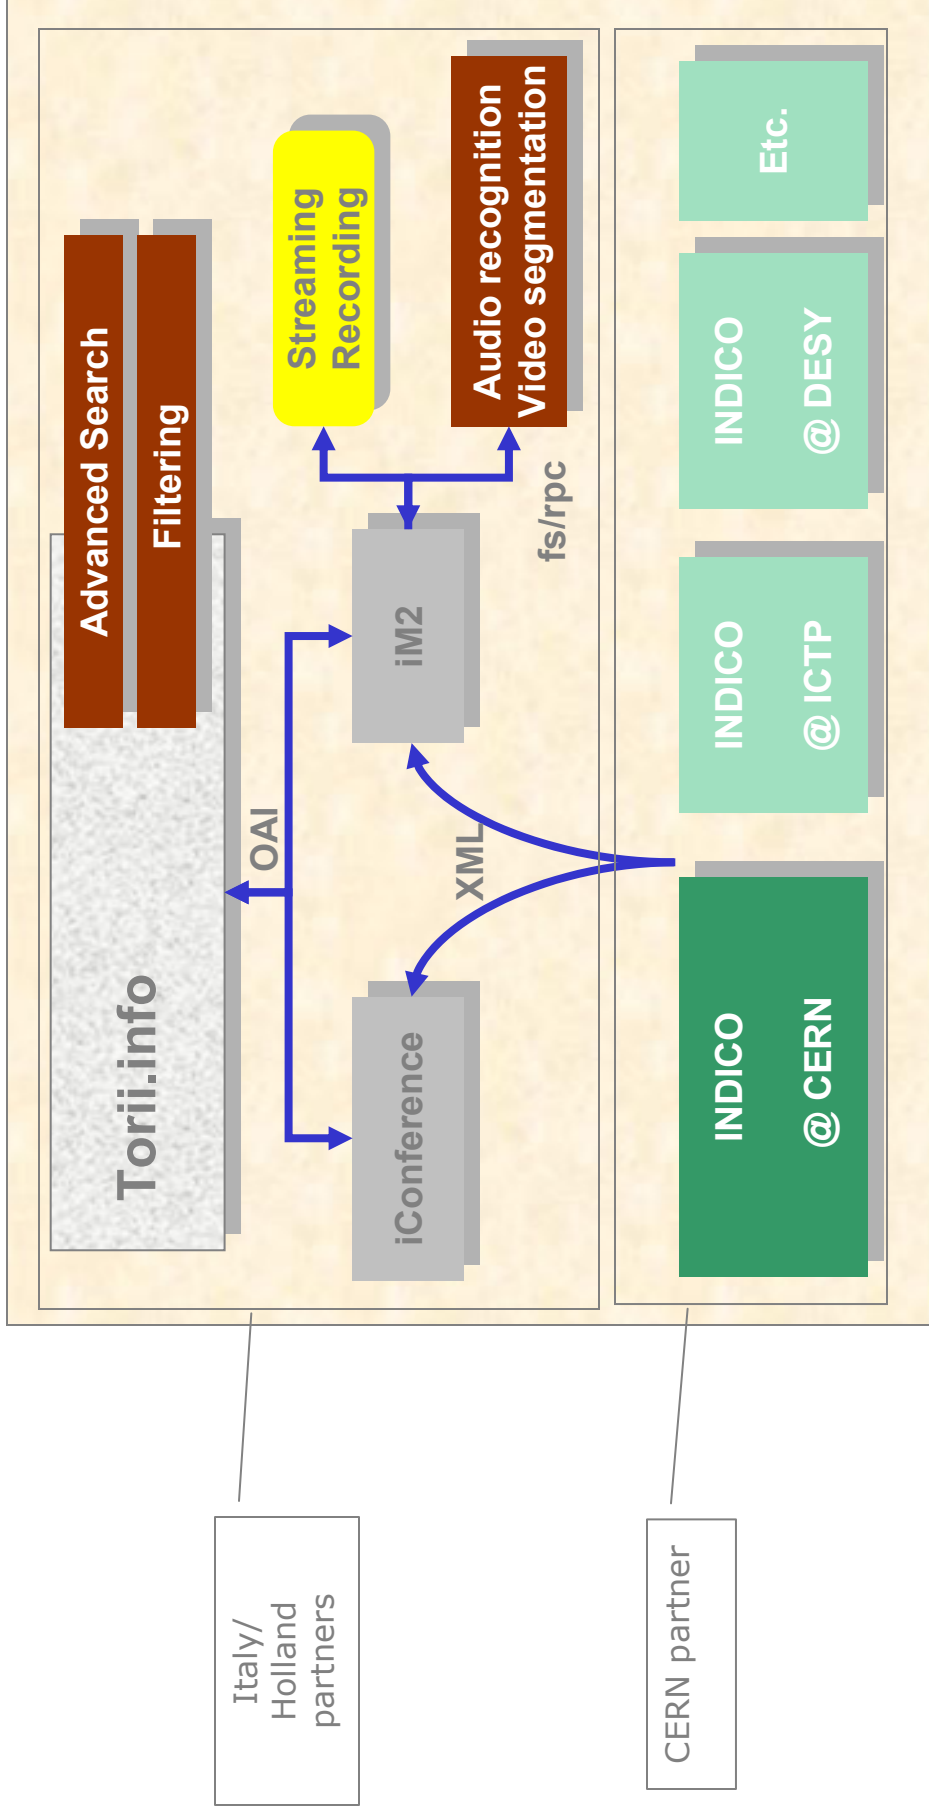

☉ 5 institutes:

Italy: SISSA, University of Udine

Holland: TNO TPD, University of Amsterdam

CERN

Project Global View

The 3 reasons of CDS involvement

☉ Archives

“Tracking” conference material: a permanent challenge for CERN library

☉ Video and Audio toolkits

<http://webcast.cern.ch> offers videos of CERN seminars.

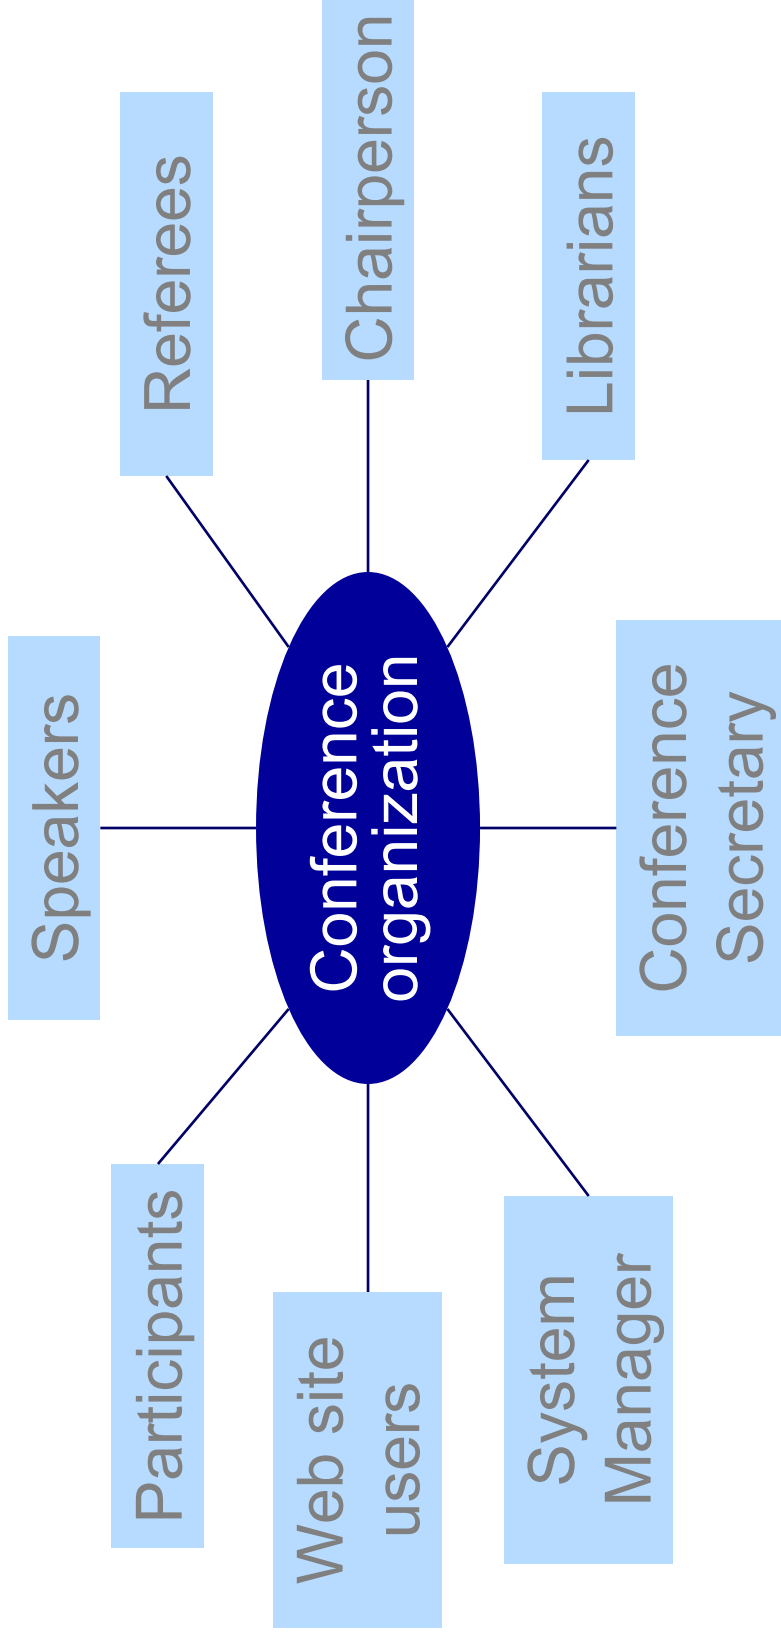

Content captured during events can be analyzed to provide better rendering and richest search capabilities.

☉ Conference Management Software

<http://agenda.cern.ch> already widely used in HEP.

Reminder of what is a conference ! (I)

☞ Many people...

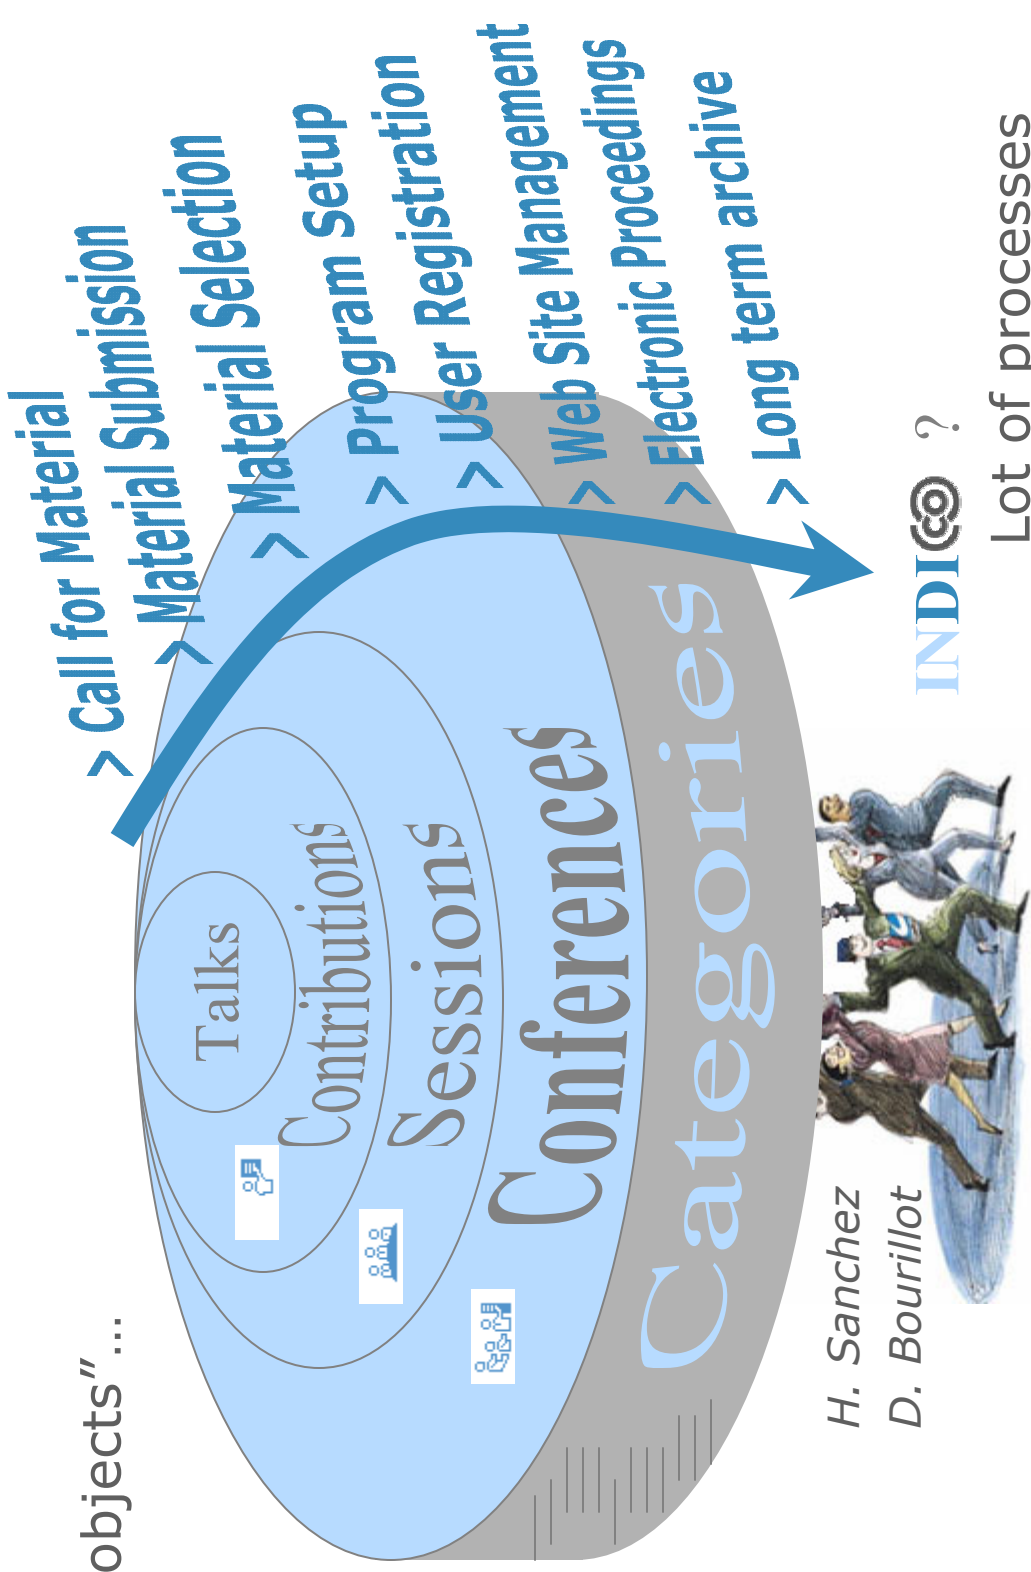

☞ And more ! (sponsors, travel coordinator, publishers...)

What is a conference ! (II)

© Lot of "objects" ...

Categories contain many conferences that contain many sessions that contain many contributions that may contain many talks with many attached material...

INDICO ?

Lot of processes

Some existing products (I)

- ☞ Commercial
 - ☞ Eveni: <http://eveni.com>
 - ☞ Suvisoft: <http://suvisoft.fi/> Corg software
 - ☞ Conference.com: <http://conference.com>
 - ☞ Softconf: <http://softconf.com> Start software
- ☞ Freeware
 - ☞ CyberChair: <http://www.cyberchair.org/>
 - ☞ Open Conference System: <http://www.pkp.ubc.ca/ocs/>
 - ☞ Zakon Group LLC: <http://www.openconf.org> Openconf
 - ☞ CDS Agenda <http://agenda.cern.ch> CERN
- ☞ *And lot of home-made apps*

Some existing products (II)

- ☹ Commercial products
 - ☹ Mainly hosting is proposed
 - ☹ Mostly service oriented, with “manual” intervention like hotels booking, paper shipping, etc
 - ☹ Targets are large conferences. Not convenient for one day workshop
 - ☹ No multi-conference features
 - ☹ High Cost: each event is charged and additional fees often asked to participants
 - ☹ Long Term problem: longevity of the web site requires to pay every year. Strong dependency on “small” company

Some existing products (III)

- ☹ Freeware products
 - ☹ Very basic features proposed and poor web interfaces
 - ☹ Incomplete
 - ☹ No much flexibility in the design
 - ☹ Aiming at single event management
 - ☹ Very little experience: not much used so far by conference organisers
- ☹ With the agendas of events stored in CDS Agenda System , we had at CERN an interesting starting point

CDS Agenda Status

- ☉ CDS Agenda is installed in several places worldwide:

- ☉ CERN (> 10,000 agendas > 70,000 files)
- ☉ IN2P3, NIKHEF, Fermilab, ICTP
- ☉ Is available as open-source under the GNU GPL
- ☉ Downloaded 108 times in 2004....

- ☉ CDS agenda served as basis for writing the user requirements of InDiCo
- ☉ InDiCo: good opportunity to face this evolution

CDS Agenda and InDiCo Compared (I)

CDS Agenda Weaknesses:	InDiCo Answers:
<ul style="list-style-type: none"> ☹ Not flexible enough (rigid structure: agenda->session->talk) 	<ul style="list-style-type: none"> ☺ Allows all combinations of elements
<ul style="list-style-type: none"> ☹ Not portable enough 	<ul style="list-style-type: none"> ☺ Is easily portable to all platforms (windows, linux...)
<ul style="list-style-type: none"> ☹ Not enough possibilities of delegating the modification 	<ul style="list-style-type: none"> ☺ Integrates a complete delegation mechanism at all levels (from the management of single files to the whole conference)
<ul style="list-style-type: none"> ☹ Not enough protection mechanisms 	<ul style="list-style-type: none"> ☺ Integrates a complete protection solution

CDS Agenda and InDiCo Compared (II)

CDS Agenda Weaknesses:	InDiCo Answers:
<ul style="list-style-type: none"> ☞ Dynamic html 	<ul style="list-style-type: none"> ☞ Standard html 4.0
<ul style="list-style-type: none"> ☞ Local login only 	<ul style="list-style-type: none"> ☞ Local or external (afs, mail) login
<ul style="list-style-type: none"> ☞ Not suited for big conferences (modification interface tends to be very slow – missing features) 	<ul style="list-style-type: none"> ☞ Manages as easily simple events and huge conferences without any performance loss ☞ Implements traditional conference management processes (user registration, call for abstract...)

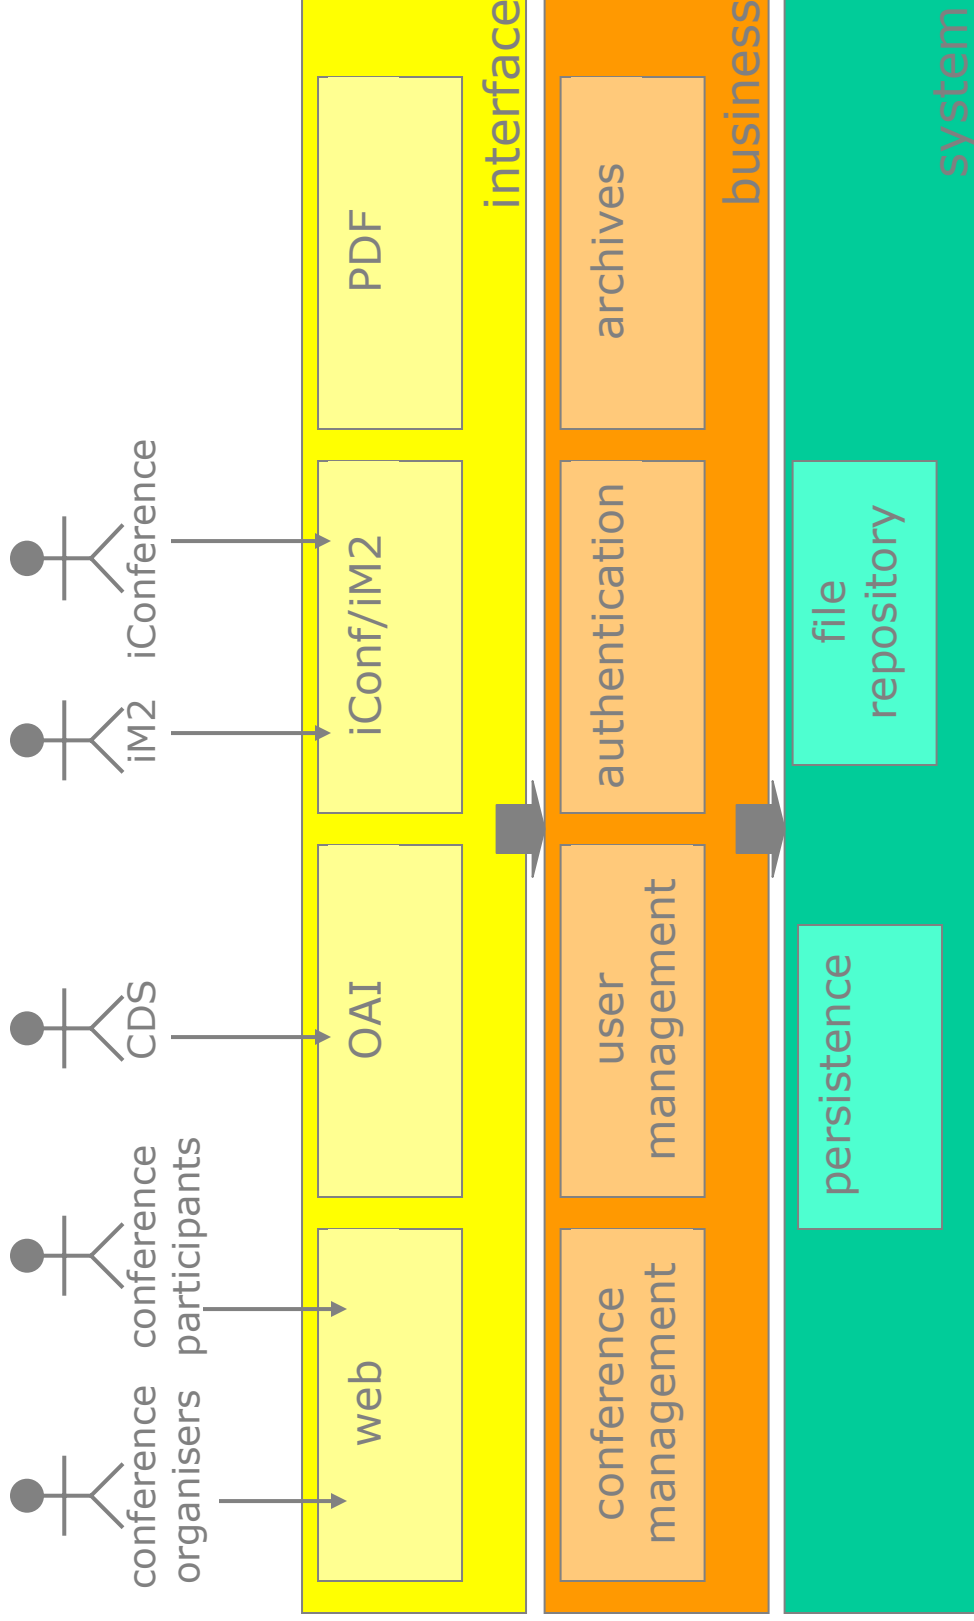

Development process

- Based on the *Unified Software Development Process*
 - light weighted and adapted
 - ✓ 5 iterations defined based on the use cases
 - ✓ Activities & results:

User req.	Analysis	Design	Implementation	Test
UR-R1	SSR	Design model Deployment model	Sw package Documentation Deployment procedures	Automated test suite

- Implementation and use of several prototypes for validation and ensuring quality and scalability

Architecture overview

Technology (I)

© **UML** for technical documentation (development models)

© **Python**

- ✓ General purpose scripting language
- ✓ Supports the OO paradigm
- ✓ High-level → less developing time
- ✓ Java or C/C++ components can be easily integrated
- ✓ CDS has good experience
- ✓ Easy to learn for potential contributors

Technology (II)

- ☉ Persistence based in **ZODB** (Zope Object Database)
 - ✓ Object Oriented database implemented in Python
 - ✓ Transparency: no need for explicit read/writes of the objects
 - ✓ Fits very well with our complex object model
 - ✓ Performance and scalability proved as it is the DB engine of Zope
- ☉ **Apache+mod_python** as application server
- ☉ The web interface is built using standard **HTML**

InDiCo Status

- ☞ In production at CERN for events in 2004
 - ☞ [CHEP 2004](#)
 - ☞ [10th Workshop on Electronics for LHC and future Experiments](#)
- ☞ Already considered for events in 2005:
 - ☞ [ICALEPCS'2005](#)
 - ☞ [Workshop Chamonix-2005 \(XIV\)](#)
- ☞ Outside CERN:
 - ☞ Pre-release installed at DESY
 - ☞ Strong interest from CNRS (Fr) and DTV (Dk)
 - ☞ Two private companies interested

Future of InDiCo at CERN ?

- ☞ Planned as replacement application for CDS Agenda by end 2004: complex migration
- ☞ Very tight deadline due to end of the project, loss of resources and support required for on-going conferences
- ☞ Good Integration in CERN environment requires more actions such as:
 - ☞ linking with room booking system
 - ☞ linking with LDAP system
 - ☞ linking with CDS archives
 - ☞ linking to webcast server
 - ☞ Adaptation of the audio and video filters
 - ☞ etc

Conclusion

- ☉ InDiCo is designed to host meetings and simple events that were hosted so far by CDS Agenda: 400 agendas per month so far this year
- ☉ At the same time, InDiCo is a professional tool to electronically support complex conferences, currently being validated by the large CHEP event
- ☉ With an estimation of 100 HEP-related conferences per month
- Number of clients should not grow too fast !

Otherwise...

KO
