

Enabling Grids for
E-science in Europe

www.eu-egee.org

NA4 Applications

F.Harris(Oxford/CERN)
NA4/HEP coordinator

Talk Outline

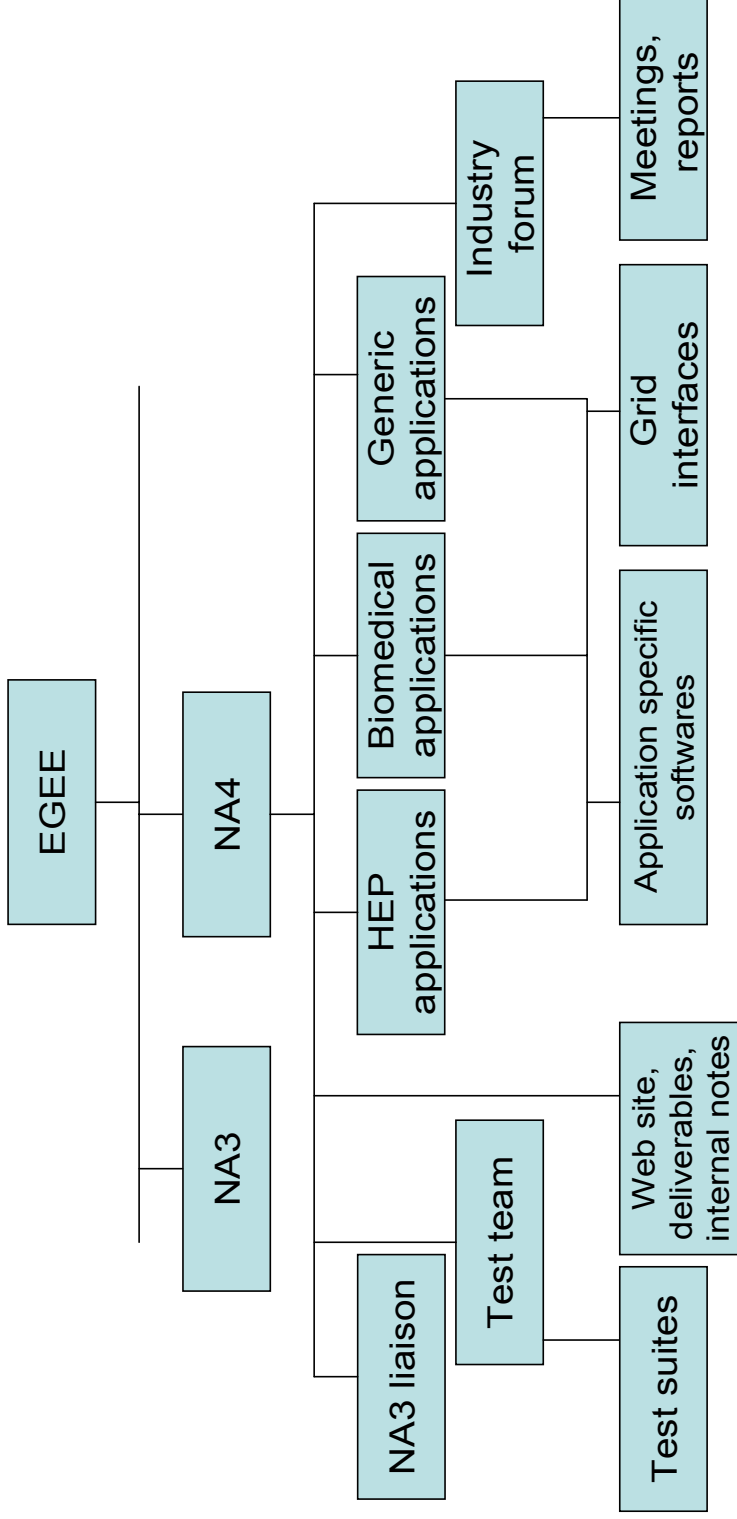

- The basic goals of NA4
- The organisation
- The participants and their roles
- The flavour of the work for the NA4 sub-groups
 - *Biomed*
 - *HEP*
 - *'Generic' applications*
 - *Testing*
 - *Industry Forum*
- Milestones and deliverables
- Relations with other EGEE activities
- Concluding comments

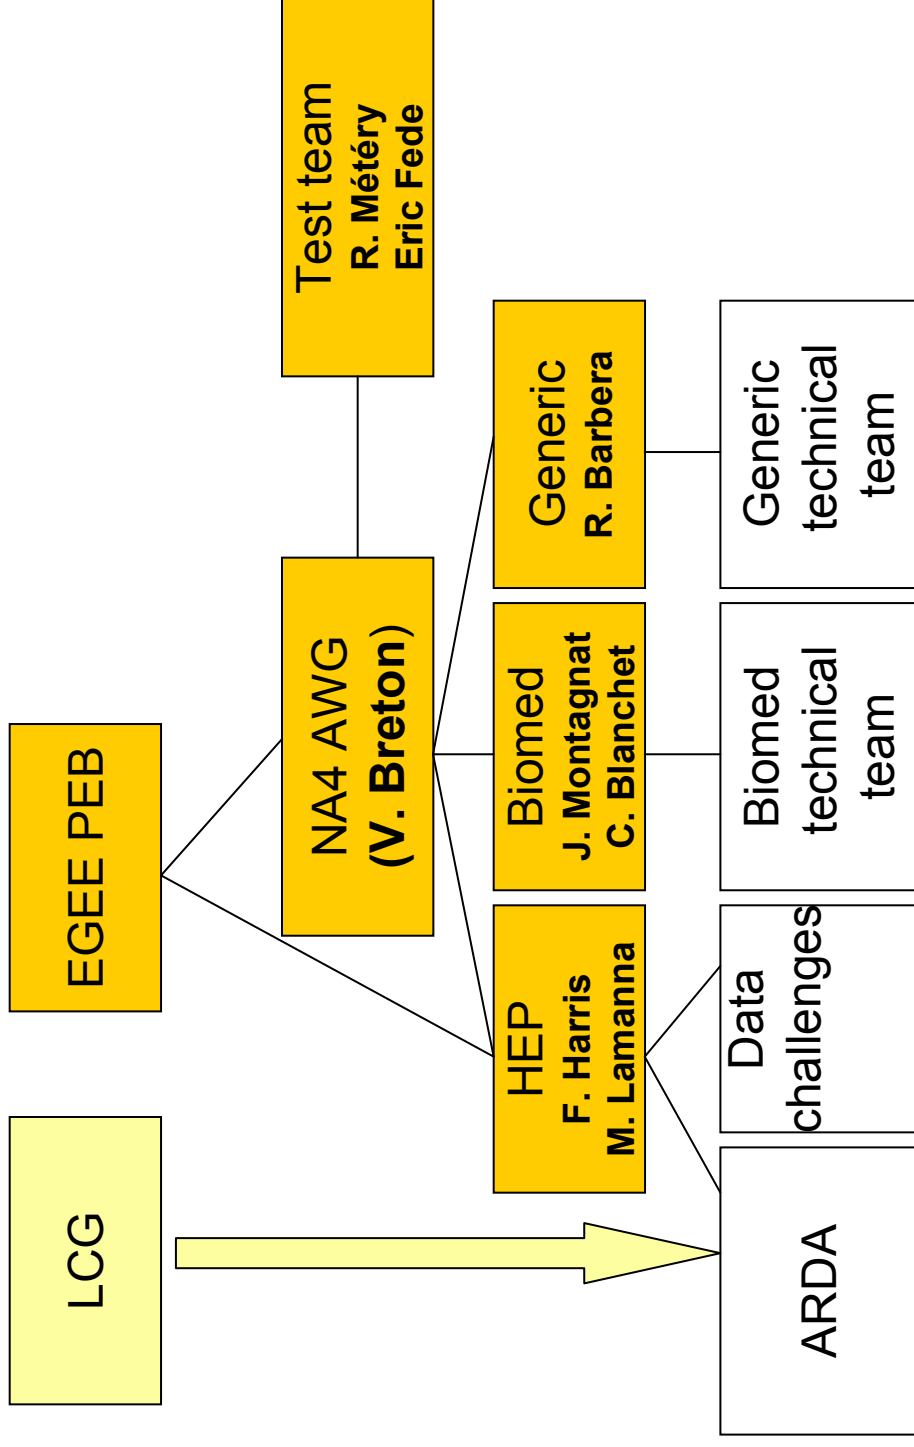

NA4: Identification and support of early-user and established applications on the EGEE infrastructure

- To identify through the dissemination partners and a well defined integration process a portfolio of early user applications from a broad range of application sectors from academia, industry and commerce.
- To support development and production use of all of these applications on the EGEE infrastructure and thereby establish a strong user base on which to build a broad EGEE user community.
- To initially focus on two well-defined application areas – Particle Physics and Life sciences, while developing a process for supporting other application areas

NA4 organisational structure

NA4 technical organization

Roles and staffing

<u>Federation</u>	<u>Role</u>	<u>FTE Funded</u>	<u>FTE Unfunded</u>
CERN	HEP Applications (coord.)	4	4 (9)
UK+Ireland	NA3 Liaison	0,5	0,5
Italy	Generic app (coord)	2	2
France	General coord., BioMed, Test team, Industry diss.	7	7
Northern Europe	Generic applications	1	1
Germany + Switzerland	Generic applications	1	1
Central Europe	Generic applications	1	1
South West Europe	BioMed	2	2
Russia	HEP, BioMed	3	3
Totals		21,5	21,5

What do all applications expect from the grid?

- **Access to a world-wide virtual computing laboratory** with vast resources
- **Possibility to organise in VOs(virtual organisations)** with members being given access rights according to their roles in the VO, and facilities to protect data
- **Transparency in data and job management** via easy to use application interfaces
- **Definite added value** in performance for both interactive and batch computation

Biomedical Applications

- **Some key applications and their characteristics**
 - ◆ Bioinformatics: gene/proteome databases distributions
 - ◆ Medical applications (screening, epidemiology...): image databases distribution
 - ◆ Parallel algorithms for medical image processing, simulation, etc
 - ◆ Interactive application (human supervision or simulation)

 - ◆ Security/privacy constraints
 - ◆ Heterogeneous data formats (genomics, proteomics, image formats)
 - ◆ Frequent data updates
 - ◆ Complex data sets (medical records)
 - ◆ Long term archiving requirements

BLAST – comparing DNA or protein sequences

- BLAST is the first step for analysing new sequences: to compare DNA or protein sequences to other ones stored in personal or public databases. Ideal as a grid application.
- Requires resources to store databases and run algorithms
- Can compare one or several sequence against a database in parallel
- Large user community

Monte carlo simulation for radiotherapy planning

HEP applications and the grid

- Have been running large distributed computing systems for many years
- Now the focus for the future is on computing for LHC and hence we have the LCG (LHC computing grid project)
- In addition to the 4 LHC experiments(ATLAS,ALICE,CMS,LHCb) other current HEP experiments use grid technology e.g. Babar,CDF,D0..., and don't forget Theory and other new HEP experiments..
- LHC experiments are currently executing large scale data challenges(DCs) involving thousands of processors world-wide and generating many Terabytes of data
- Moving to so-called 'chaotic' use of grid with individual user analysis (thousands of users operating within experiment VOs)..see ARDA

LHC Experiments

ATLAS

CMS

Storage –

Raw recording rate **0.1 – 1 GByte/s**

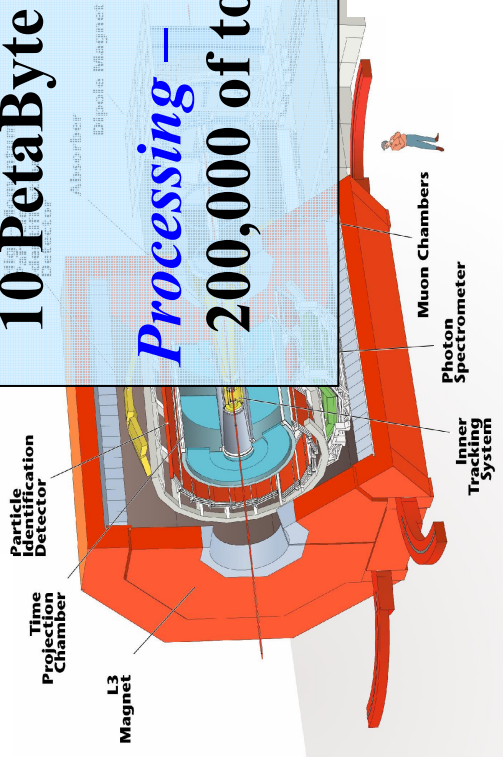

Accumulating at **5-8 PetaByte/year**

10 PetaByte of disk

Processing –

200,000 of today's fastest PCs

ALICE

LHCb

LHC Computing Grid Project - a Collaboration

Building and operating the LHC Grid – a collaboration between

- The physicists and computing specialists from the LHC experiment
- The projects in Europe and the US that have been developing Grid middleware
- The regional and national computing centres that provide resources for LHC
- The research networks

Researchers

Software Engineers

Service Providers

desktops
portables

small
centres

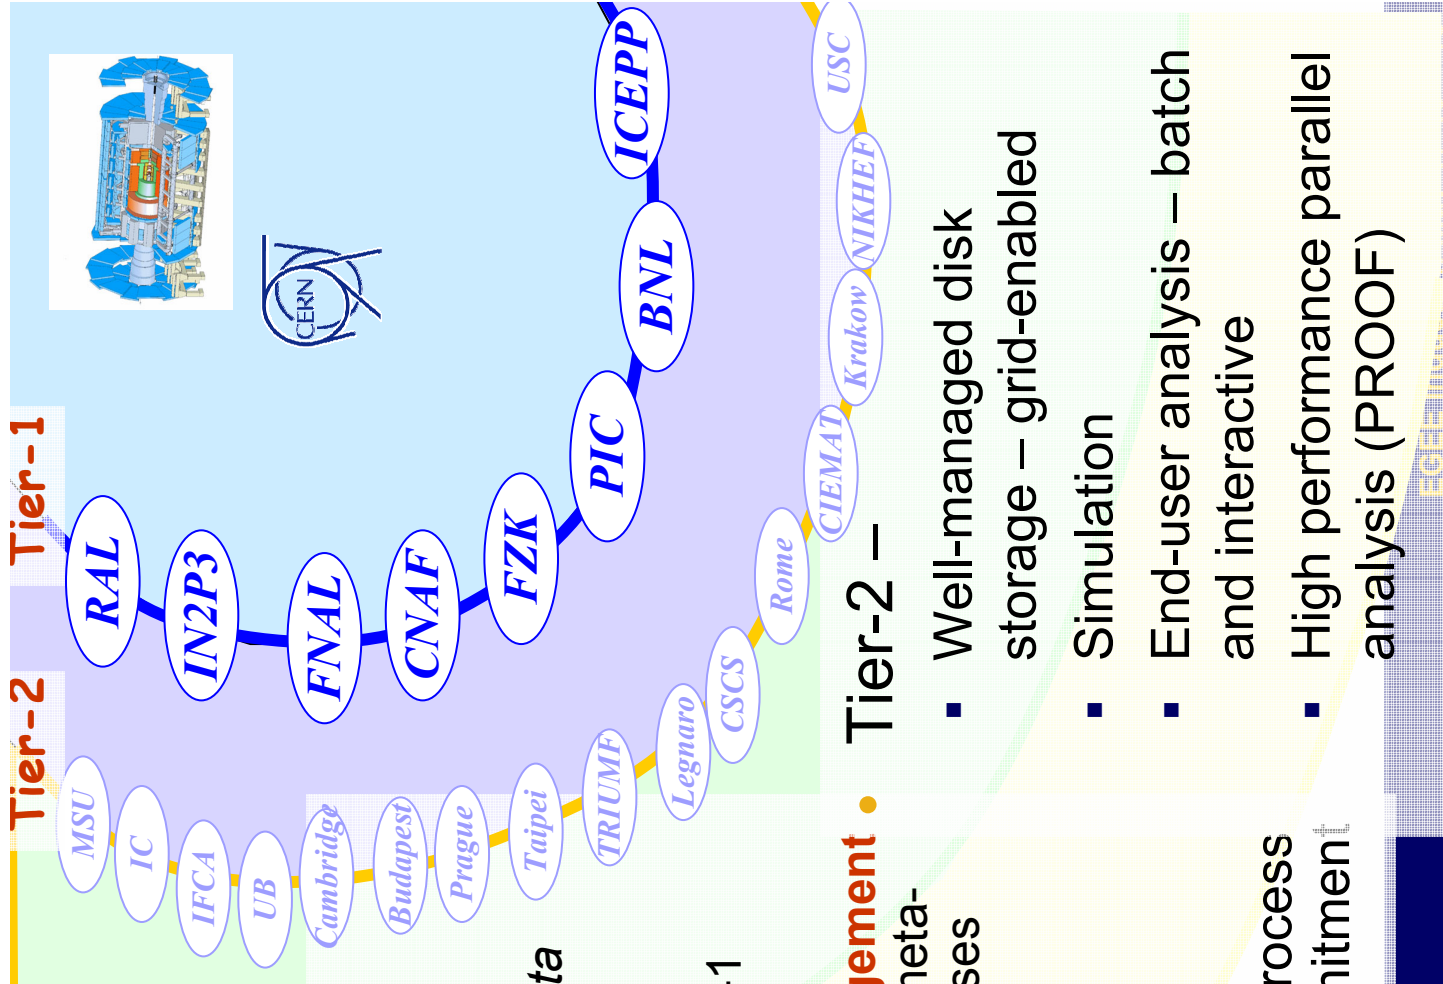

LHC Computing Model (**simplified!!**)

- Tier-0 – the accelerator centre
 - Filter → raw data
 - Reconstruction → summary data (ESD)
 - Record raw data and ESD
 - Distribute raw and ESD to Tier-1

• Tier-1 –

- Permanent storage and **management** of raw, ESD, calibration data, meta-data, analysis data and databases → **grid-enabled data service**
- Data-heavy analysis
- Re-processing raw → ESD
- National, regional support

“online” to the data acquisition process
high availability, long-term commitment
managed mass storage

Current estimates of Computing Resources needed at Major LHC Centres

First full year of data - 2008

Processing M S12000** Disk PetaBytes Mass Storage PetaBytes

CERN	20	5	20
Major data handling centres (Tier 1)	45	20	18
Other large centres (Tier 2)	40	12	5
Totals	105	37	43

** Current fast processor ~1K S12000

Characteristics of CMS Data Challenge DC04 (just completed).....run with LCG-2 and CMS resources world-wide (US Grid3 was a major component)

- **Pre-Challenge Production (Phase 1) – simulation generation and digitisation**
- **Data Challenge (Phase 2)**

- **After 8 months of continuous running:**

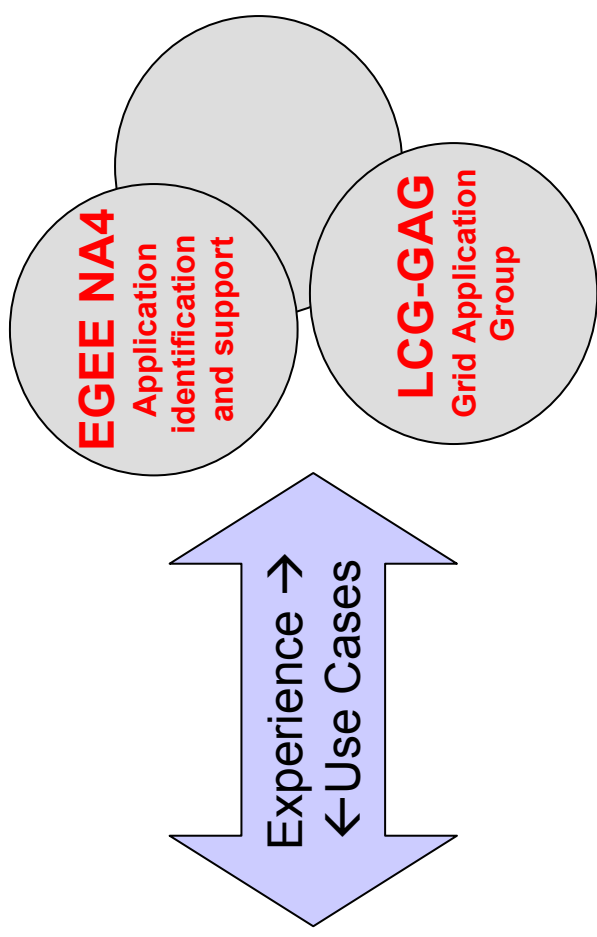

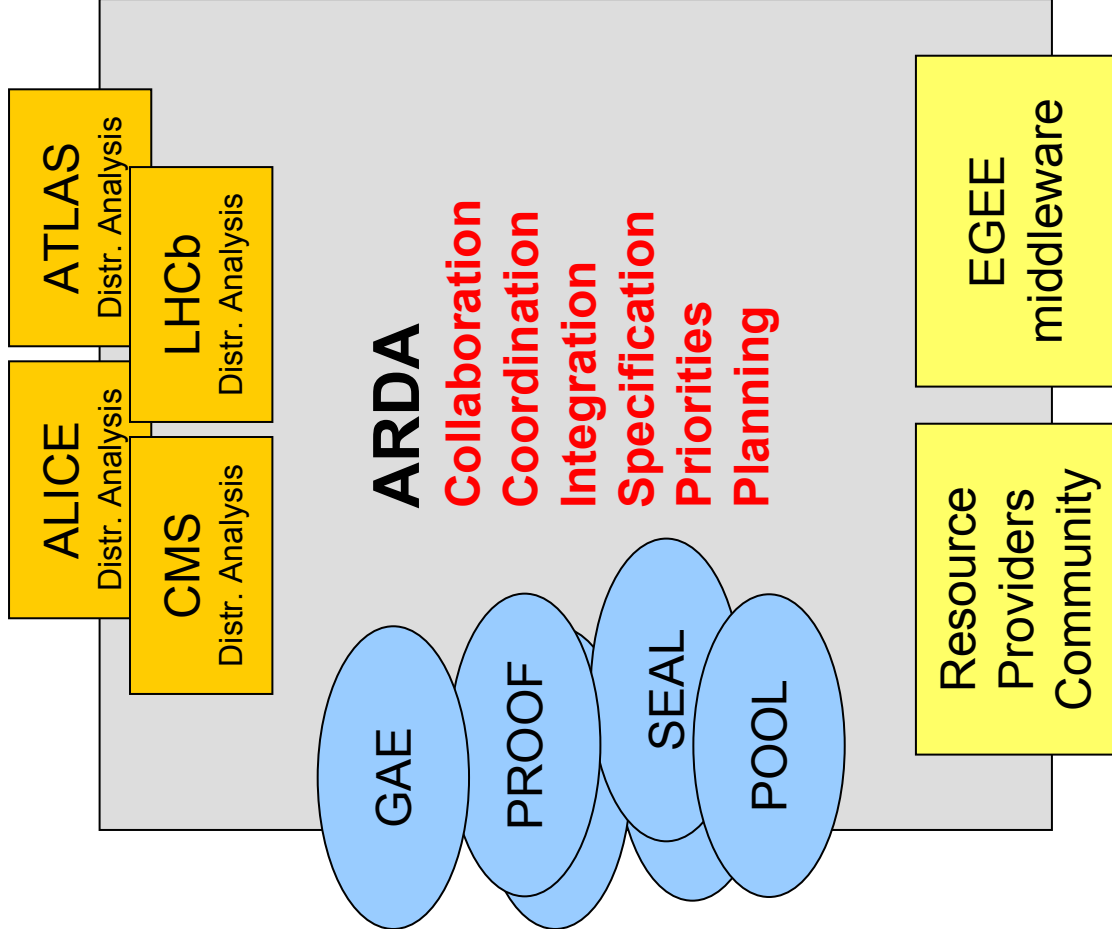

- 750,000 jobs
- 3,500 KSI2000 months
- 700,000 files
- 80 TB of data

- **Ran the full data reconstruction and distribution chain at 25 Hz**

- **Achieved**

- 2,200 jobs/day (about 500 CPU's) running at Tier-0
- Total 45,000 jobs Tier-0 and 1
- 0.4 files/s registered to RLS (with POOL metadata)
- Total 570,000 files registered to RLS
- 4 MB/s produced and distributed to each Tier-1

ARDA (Architectural Roadmap for Distributed Analysis)

NA4 Generic Applications

- This is a key activity in the process of getting new scientific and industrial communities interested and committed to use the continental grid infrastructure built by the EGEE Project.
- GENIUS is a well established tool which will be fundamental in the process of interfacing new applications with the EGEE middleware hiding its complex internals to non-experts users from new communities.
- GILDA is a complete suite of grid elements (test-bed, CA, VO, monitoring system, web portal) and applications fully dedicated to dissemination purposes. **This could also represent the ideal grid testbed where to start the porting of new generic applications.**
- GILDA is the dissemination tool which will be used by NA3 during courses and tutorials so the important aspect of induction of the grid paradigm to new communities is also covered.
- It is now important to have the first meeting of the EGAAP board and define the first Generic Applications to be interfaced.

The GILDA home page (<http://gilda.ct.infn.it>)

- Grid tutorials
- Instructions for users
- Instructions for sites
- Useful links
- Usage Statistics

GILDA (Grid Infn L aboratory for D issemination A ctivities)

is a virtual laboratory to demonstrate/disseminate the strong capabilities of grid computing.

GILDA consists of the following elements:

- the [GILDA Testbed](#): a series of sites spread all over Italy where the last version of the [Grid.It](#) grid middle-ware is installed;
- the [GILDA Certification Authority](#): a fully functional Certification Authority which issues 14-days X.509 certificates to everybody wanting to experience grid computing on the GILDA Testbed;
- the [GILDA Virtual Organization](#): a Virtual Organization gathering all people wanting to experience grid computing on the GILDA Testbed;
- the [Grid Demonstrator](#): a customized version of the full GENIUS web portal, jointly developed by INFN and NICE , from where users belonging to the GILDA VO can submit a pre-defined set of applications to the GILDA Testbed;
- the [GENIUS web portal](#): the full GENIUS web portal, to be used only during grid tutorials;
- the [monitoring system](#): a versatile monitoring system completely based on [GridICE](#), the grid monitoring tool developed by INFN;
- the [GILDA mailing list](#): gilda@infn.it, also archived on the web [here](#).

GILDA is an activity of the [Italian Istituto Nazionale di Fisica Nucleare \(INFN\)](#) carried on in the context of both the [Italian INFN Grid](#) and European [EGEE](#) Projects.

The Generic Application questionnaire (contribution to MNA4.1)

- Questionnaire to get information and first requirements from new communities interested in using the EGEE Infrastructure (<http://alipc1.ct.infn.it/grid/egee/na4/questionnaire/na4-genapp-questionnaire.doc>)
- Feed-backs received so far (<http://alipc1.ct.infn.it/grid/egee/na4/questionnaire>):
 - **Astrophysics (EVO and Planck satellite)**
 - **Earth Observation (ozone maps, seismology, climate)**
 - **Digital Libraries (DILIGENT Project)**
 - **Grid Search Engines (GRACE Project)**
 - **Industrial applications (SIMDAT Project)**
- Interest also from Computational Chemistry (Italy and Czech Republic), Civil Engineering (Spain), and Geophysics (Switzerland and France) communities

EGEE Industry Forum Objectives

- The main role of the Industry Forum in the Enabling Grids for E-Science in Europe (EGEE) project is to raise awareness of the project amongst industry and to encourage businesses to participate in the project. This will be achieved by making direct contact with industry, liaising between the project partners and industry in order to ensure businesses get what they need in terms of standards and functionality and ensuring that the project benefits from the practical experience of businesses.
- The members of the EGEE Industry Forum are companies of all sizes who have their core business or a part of their business within Europe.
- The Industry Forum will be managed by a steering group consisting of EGEE project partners and representatives from business
- <http://public.eu-egEE.org/industry-forum/information>

NA4 Testing Group

Three types of tests will be developed:

(based on user requirements and on the experience gathered by the ongoing activities like LHC DCs and ARDA prototyping)

- **Tests of service availability:** This set of tests will check the EGEE services availability. All the services providing by the GRID should be tested : Job submission and management, files management, Information service, ...
- **Tests of functionality:** To verify that the functionalities required are available , usable and complete; for example, file creation, moving and deletion, information publication, errors recovery.
- **Tests to measure performances:** Their goal is to characterize the testbed from the end users/application perspective. Part of them will be time measurements (time to submit X job, time to replicate Y files,...), others will address scalability measurements (how many jobs can be accepted by service Z, files limits size,...) while others will be more abstract (information availability, errors message access,...).
- **This work should be done in close collaboration with ARDA , JRA1 and SA1**

Milestones for NA4 applications

MNA4.1	M6	<p>First applications migrated to the EGEE infrastructure</p> <ul style="list-style-type: none">•HEP data challenges for 4 LHC experiments and for D0•Biomedicine – GATE simulation in nuclear medicine + others•Plus the first ‘generic’ applications
MNA4.2	M12	<p>First external review of Applications Identification and Support with feedback</p>
MNA4.3	M24	<ul style="list-style-type: none">•Second external review of Applications Identification and Support with feedback

Deliverables for NA4 applications

DNA4.1	M3	Definition of Common Application Interface (specially important for new applications...probably based on GENIUS flavoured work)
DNA4.2	M6	Target Application Sector Strategy document (work for getting new applications onto EGEE)
DNA4.3	M9	EGEE Application Migration Progress report (revision M15 and M21) <ul style="list-style-type: none"> All applications will include evaluations on production and pre-production services of LCG (current and 'new' middleware)
DNA4.4	M24	Final Report of Application Identification and Support Activity

NA4 relations with other EGEE activities and other bodies (1)

- **SA1 grid operations**
 - How to get new VOs onto LCG from different domains?
 - How to integrate new resources(sites) into LCG coming from different application areas?
 - Rationalisation of test procedures
 - Working with national agencies (e.g. GridPP Application monitoring)
- **NA3 training**
 - Estimating requirements for courses
 - Design and implementation of courses
- **JRA1 middleware**
 - All applications input requirements and monitor their satisfaction with feedback to middleware (process goes through the PTF-Project Technical Forum)
- **JRA2 quality assurance**
 - NA4 have a representative on this group to define process for monitoring quality of EGEE services

NA4 relations with other EGEE activities and other bodies (2)

- **JRA3 security**
 - Security of medical (and other application) data
 - Security for sites
- **SA2, JRA4 networking**
 - Global HEP requirements through LCG
 - Biomed and other applications must similarly give global needs
 - NA4 will give individual application use cases especially where problems have been encountered
- **LCG**
 - NA4/HEP are presented on the LCG/GAG(grid Applications Group)
 - This is HEP source of requirements and giving feedback to middleware on 'customer satisfaction'. Some GAG people are on the PTF.

Conclusions

- **NA4 is up and running now**
 - HEP is using LCG-2 for data challenges
 - ARDA is well under way and waiting for first new middleware prototype
 - Biomedicine has applications ready to go onto LCG-2 and pre-production services
 - Generic group is very active with GILDA and excellent relations with NA3
 - Testing group has active dialogue with JRA1 and ARDA for rationalising testing effort
 - Industry forum has developed links with several companies (see EGEE Cork presentations)
- **NA4 open meeting Jul 14-16 at Catania with emphasis on inter-activity dialogue** (with middleware, operations, security, networking)
- **NA4 Web site** <http://egee-na4.ct.infn.it>
