

# Welcome and Some Details

Joel Butler

# Goals and the Schedule

- We want to summarize recent progress and make plans for activities over the next 6 months
- The focus is “mostly” on Phase 1 of the Upgrade
  - But with a session on Tracking Triggers for Phase 2
- Note that the power and cooling talk is not at the plenary session. We will use the extra time for questions and an extended break.
- After this morning’s plenary sessions, the workshop consists mostly of parallel sessions for the Muon system, Hadron Calorimeter, Tracker, Trigger, and Electromagnetic Calorimeter
  - The Trigger has two parts
    - Wednesday afternoon: the main trigger infrastructure and Phase 1 upgrade
    - Thursday until mid-afternoon: the Tracking Trigger for Phase2
- There are additional “cross group” sessions on Thursday afternoon to allow discussion between the Trigger group and the Tracker and the Trigger group and the Muon detectors and calorimetry
- There is an additional plenary session on software issues for the Upgrade on Thursday
- The simulation group has a talk in the plenary session and will contact with each detector group to discuss simulation issues
- Working groups will present a brief summary of what they accomplished and a work plan for the next 6 months on Friday at the closeout session. A discussion will follow

# Room Assignments

- Rooms for parallel session are all in Wilson Hall (WH)
  - You are in 1 W(est), the Wilson Hall entrance is to the North
  - WH11NE (Sunrise Room) and WH11NW (ROC room) on 11<sup>th</sup> floor
