*quattor is an **administration toolkit** for **optimizing resources***

Goal: quattor is a system administration toolkit providing a powerful, portable and modular tool suite for the automated installation, configuration and management of clusters and farms running UNIX derivatives like Linux and Solaris.

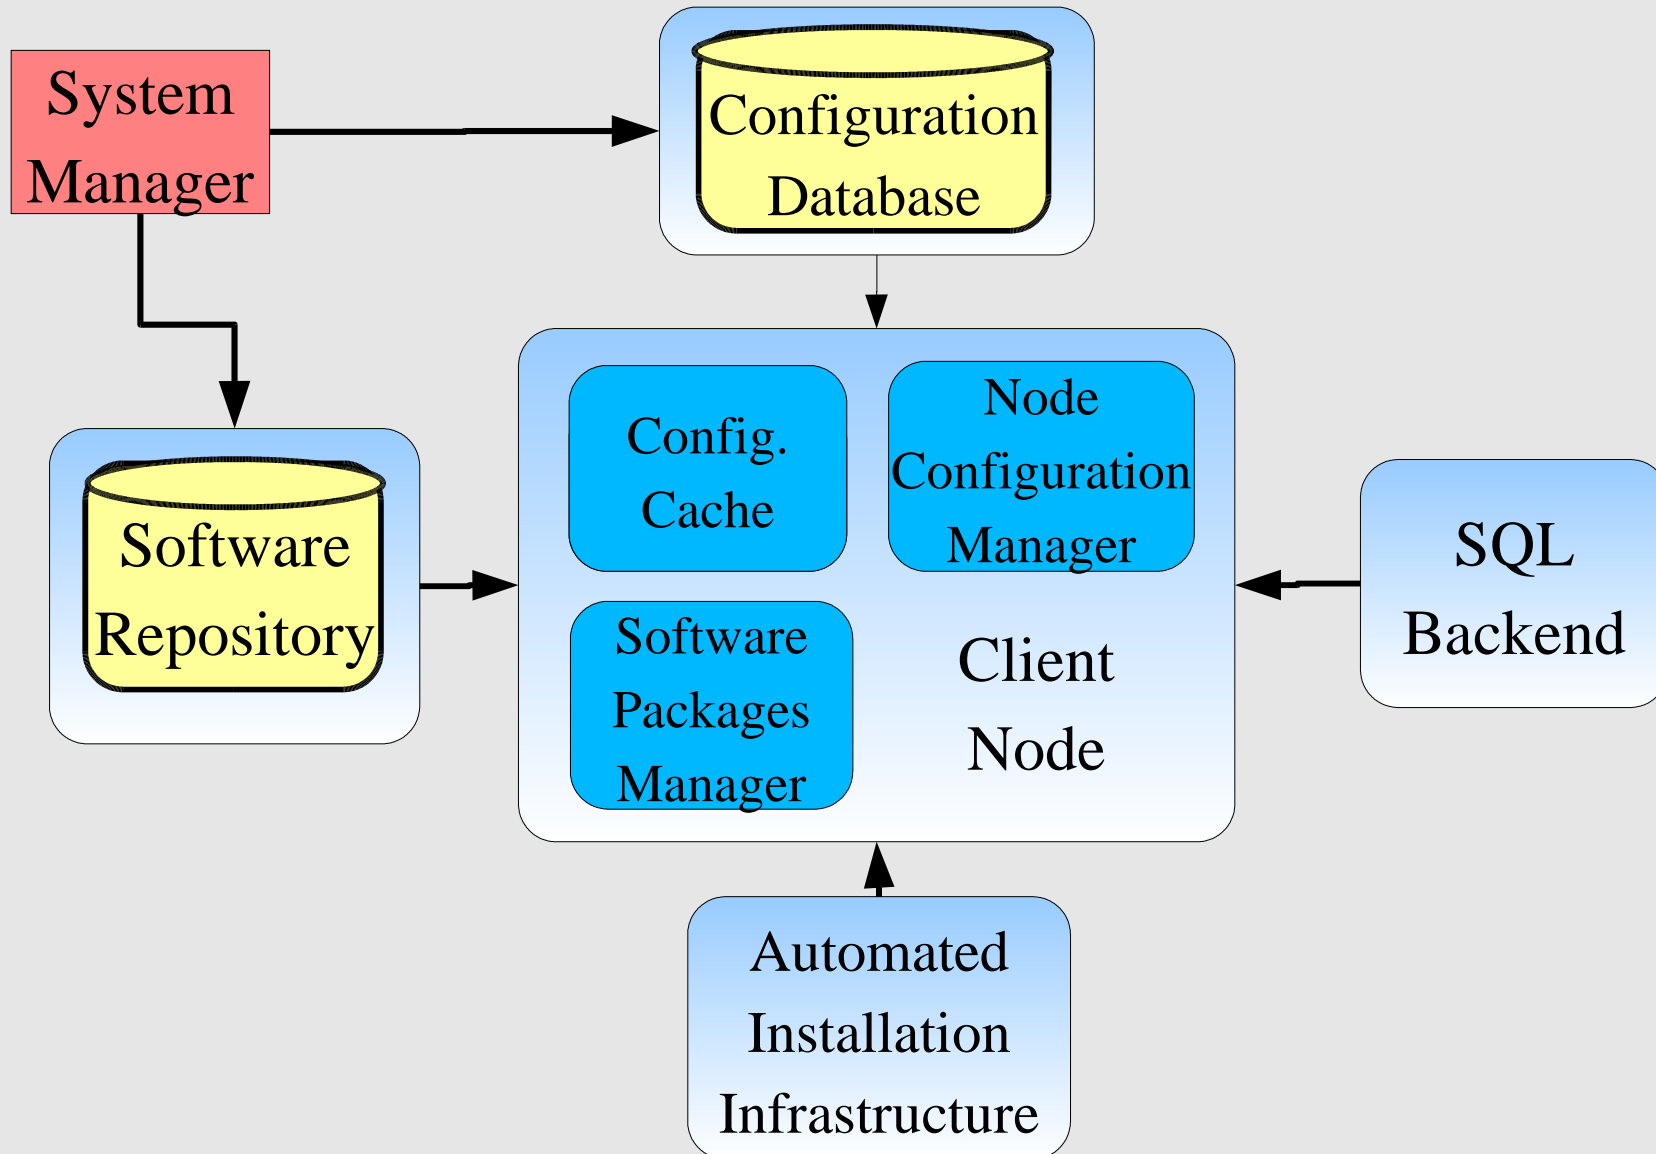

License: EU DataGrid (Open Source)

Web page: <http://www.quattor.org>

Design Elements

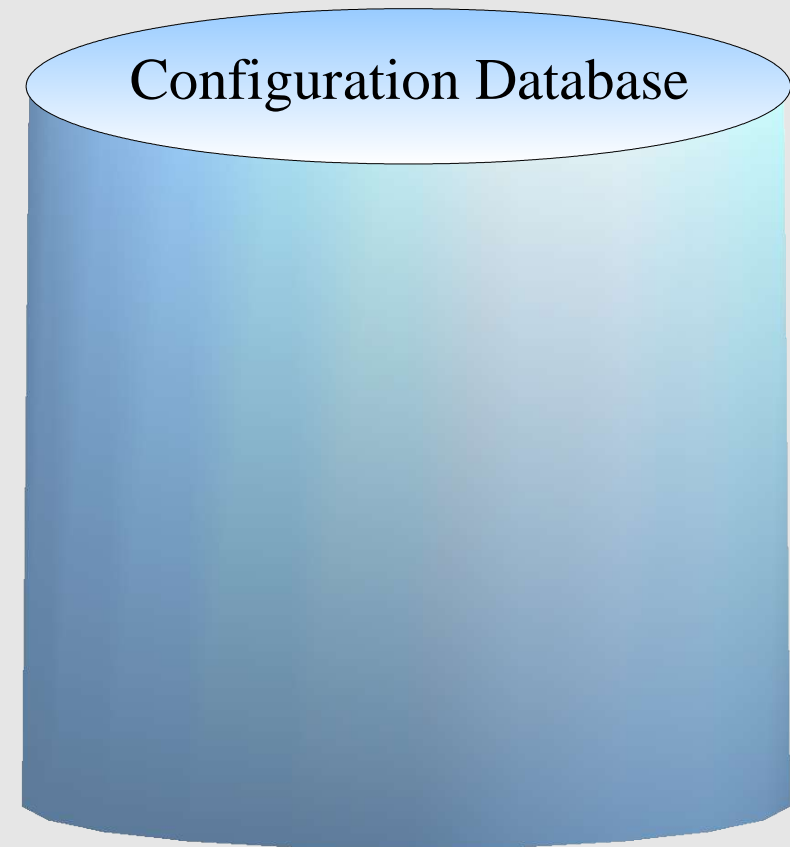

- ◆ Highly modular
- ◆ Non-intrusive system
- ◆ Use of third party tools (KickStart, PXELinux, DHCP, ...)
- ◆ Use of well known standards (HTTP, XML, etc.)
- ◆ Distributed approach
- ◆ Provides a set of base libraries

Global Quattor Architecture

```
# New Types: CPU
define type cpu_t = {
    "vendor" : string
    "model"  : string
    "speed"  : double
};

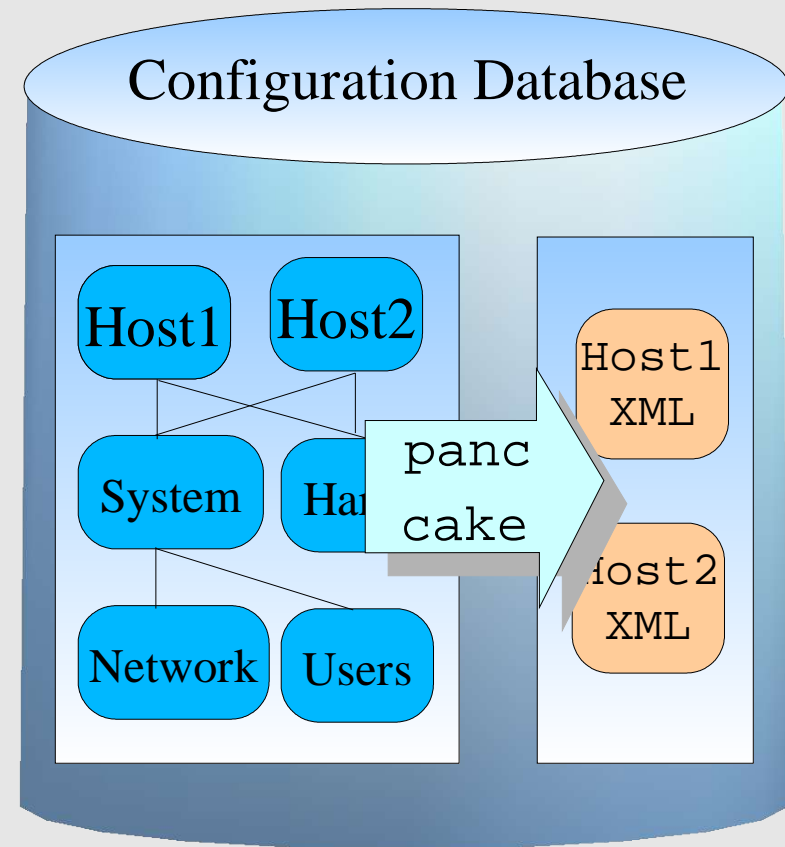

# Structures
structure template cpu_intel_p3_800;
    "vendor" = "Intel";
    "model"  = "Pentium III (Coppermine)";
    "speed"  = 796.550 # Mhz

# Validation code
# be sure we have 256MB of RAM per CPU
valid "/hardware/memory/size" =
    self >= 256 * length(value("/hardware/cpus"));

# Functions
define function increment = {
    argv[0] = argv[0] + argv[1];
};
```
