egee – Enabling Grids for E-sciencE

EGEE04 - The fourth EGEE Conference – 23-28 October 2005, Pisa, Italy

Session:

Operational Security – OSCT

Sub-session:

SSC

Tuesday, 25 October 2005

SSC
Security Service Challenges

The Joint Security Policy Group (JSPG) is the body to provide policy and site requirements to the deployment and middleware engineering activities. The activities cover both the LCG and EGEE communities.

Under the auspices of the JSPG, the Operational Security Coordination Team (OSCT) has planned a series of Security Service Challenges (SSC). The first SSC will measure to what extent the many sites are prepared to handle security issues implicit in the structure of the grid. The test will be executed through the regional control centers and will focus on access to and interpretation of information and efficient use of communication channels.
