- Summary

Enabling Grids for E-sciencE

Architecture Definition

- Based on Design Team work
- Associated implementation work plan
- Design description of Service defined in the Architecture document
 - Really is a definition of interfaces
- Yearly cycle

Implementation Work plan

- Prototype testbed deployment for early feedback
- Progress tracked monthly at the EMT

EMT defines release contents

- Based on work plan progress
- Based on essential items
 - So far mainly for HE BioMed
- Decide on targ
 - Taking Sugh time for intraction
- Integrated produces Release ased on received tags

moke Test, Deployment Modules,

— Iterate with developers

gLite Processes

Testing Team

- Test Release candidates on a distributed testbed (CERN, Hannov perial College)
- Raise Critical bugs
- Iterate with Intermodel

• Once Releases a ne passed function wices

simple am produces documentation, ces and final packaging arce the release on the glite Web site the glite-discuss mailing list.

Deployment on Pre-production Service and/or Service Challenges

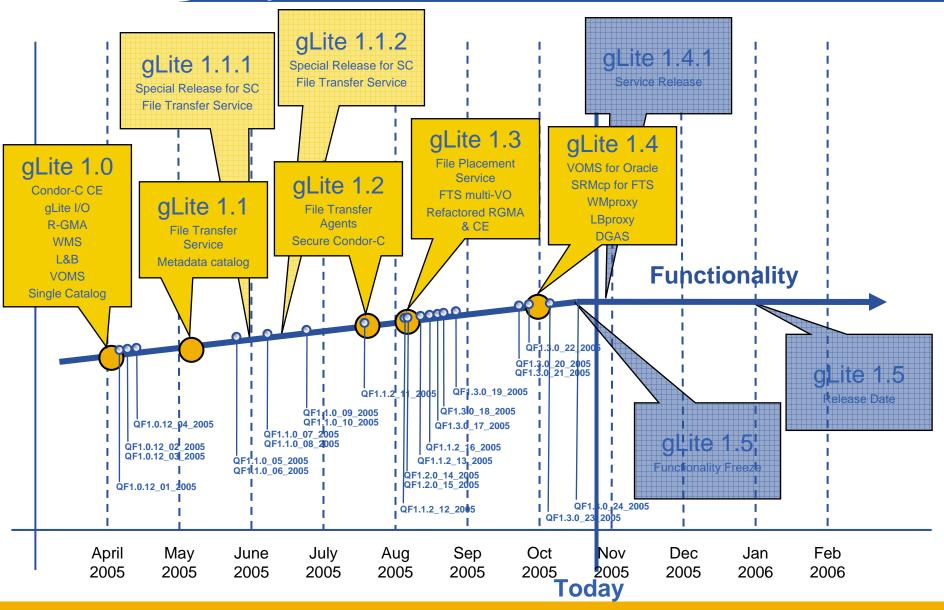

- Feedback from larger number of sites and different level of competence
- Raise Critical bugs as needed
- Critical bugs fixed with Quick Fixes when possible

Deployment on Production of selected set of Services

- Based on the needs (deployment, applications)
- Today FTS clients, R-GMA, VOMS

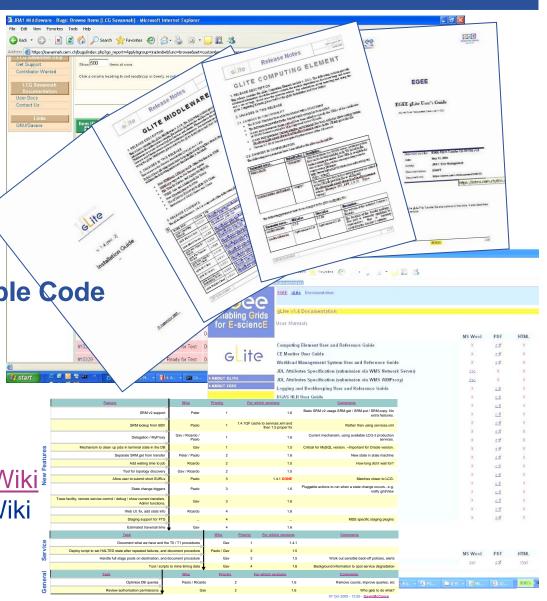

gLite Releases and Planning

gLite Documentation and Information sources

- Installation Guide
- Release Notes
 - General
 - Individual Components
- User Manuals
 - With Quick Guide sections
- CLI Man pages
- API's and WSDL
- Beginners Guide and Sample Code
- Bug Tracking System
- Mailing Lists
 - gLite-discuss
 - Pre-Production Service
- Other
 - Data Management (FTS) Wiki
 - Pre-Production Services Wiki
 - Public and Private
 - Presentations

Job Management Services

- VOMS and VOMS Admin
 - Support for Oracle DB backend
 - Included in VDT
- LB
 - LB Proxy
 - Provides faster, synchronous and more efficient access to LB services to WMS services
 - Support for "CE reputability ranking"
 - Maintains recent statistics of job failures at CE's
 - Feeds back to WMS to aid planning
- CE
 - BLAH
 - More efficient parsing of log files (these can be left residing on a remote machine)
 - Support for hold and resume in BLAH
 - To be used e.g. to put a job on hold, waiting for e.g. the staging of the input data
 - Condor-C GSI enabled
 - CEMon
 - Major reengineering of this service
 - Better support for the pull mode; More efficient handling of CEmon reporting
 - Security support
 - Possiblity to handle also other data
 - o E.g. a Gridlce plugin for CEMon implemented
 - Included in VDT and used in OSG for resource selection

Job Management Services

Enabling Grids for E-sciencE

GPbox

- XACML-based policy maintainer, parser and enforcer.
- Can be used for authorisation checks at various levels.

WMS

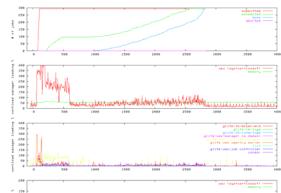

- WMProxy
 - Web service interface to the WMS
 - Allows support of bulk submissions and jobs with shared sandboxes
- Support for shallow resubmission
 - Resubmission happens in case of failure only when the job didn't start running Only one instance of the user job can run.
- Support for MPI job even if the file system is not shared between CE and WNs
- Support of R-GMA as resource information repository to be used in the matchmaking besides bdll and CEMon
- Support for execution of all DAG nodes within a single CE chosen by user or by the WMS matchmaker
- Support for file peeking to access files during the execution of the job
- Initial integration with G-Pbox considering simple AuthZ policies
- Initial support for pilot job
 - Pilot job which "prepare" the execution environment and then get and execute the actual user job

DGAS Accounting

CEs can be instrumented with proper sensors to measure the resources used

Job provenance

- Long term job information storage
- Useful for debugging, post-mortem analysis, comparison of job executions in different environments
- Useful for statistical analysis

Data Management Services

Enabling Grids for E-sciencE

gLite I/O

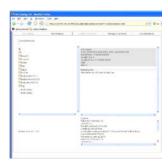

- dCache and DPM support added
- Added a remove method to be able to delete files.
- Changed the configuration to match all other CLI configuration to service-discovery
- Improved error reporting
- Will be used for the BioMedical Demo
 - Encryption and DICOM SRM

FiReMan catalog

- Oracle and MySQL versions available
- Secure services, using VOMS groups, ACL support for DNs
- Full set of Command Line tools
- Simple API for C/C++ wrapping a lot of the complexity for easy usage
- Attribute support
- Symbolic link support
- Exposing ServiceIndex and DLI (for matchmaking)
- Separate catalog available as a keystore for data encryption ('Hydra')

AMGA MetaData Catalog

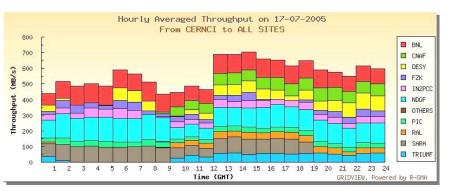

- NA4 contribution
 - Result of JRA1 & NA4 prototyping together with PTF assessment

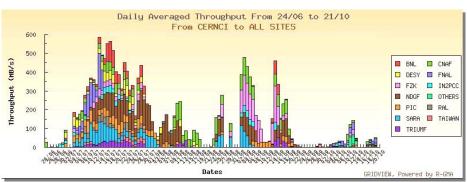

File Transfer Service

- Technology preview in gLite 1.0
- Full scalable implementation
 - Java Web Service front-end, C++ Agents, Oracle or MySQL database support
 - Support for Channel, Site and VO management
 - Interfaces for management and statistics monitoring
 - Gsiftp, SRM and SRM-copy support
- Has been in use by the Service Challenges for the last 3 months. Robust, production quality service.

Information Systems

Enabling Grids for E-sciencE

R-GMA

- Essentially bug fixes & consolidation
- Merging LCG & gLite code base
- Secure version

Service Discovery

- Was not part of gLite 1.0
- An interface has been defined and implemented for 3 back-ends
 - R-GMA
 - BDII
 - Configuration File
- Command Line tool for easy query and conversion between back-ends
- Used WMS and Data Management clients

Status of gLite Deployment

Enabling Grids for E-sciencE

Production

- FTS
- R-GMA (Monitoring & Accounting Data Aggregation)
- VOMS

Preproduction Service

- 14 sites
- CERN, CNAF, PIC CE's are connected to the production worker nodes
- ~ 1M Jobs submitted
- FTS, WMS/LB/CE, FireMan, gLite I/O (DPM, Castor), R-GMA

Others

DILIGENT has deployed a number of those services as well

gLite Testing Status

	Deployment	Test suite	Stress	Defect Regression	Defect verification	Test report
CE	✓	✓	✓	✓	✓	√
I/O	√	√	√	✓	✓	✓
L&B	✓	×	×	×	✓	×
WMS	✓	✓	✓	M	✓	✓
R-GMA	✓	✓	✓	M	✓	√
VOMS	✓	✓	√	M	✓	√
FTS	✓	✓	×	M	✓	✓
Data Catalog	✓	✓	×	M	✓	✓
SD	✓	×	×	×	✓	×
DGAS	√	×	×	×	✓	√

gLite 1.4 Metrics

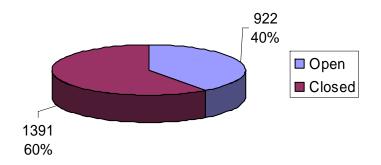

Enabling Grids for E-sciencE

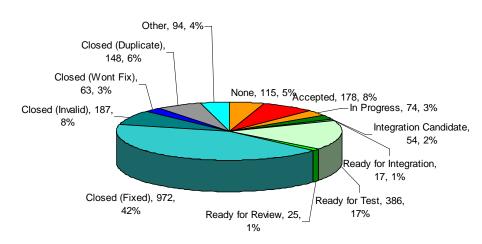

Bugs by status

Total open/closed bugs (Total = 2313)

Summary

gLite releases have been produced

- Tested, Documented, with Installation and Release notes
- Subsystems used on
 - Service Challenges
 - Pre-Production Services
 - Production Service
- And by other communities (e.g. DILIGENT)
- gLite processes are in place
 - Closely monitored by various bodies
 - Hiding many technical problems to the end user
- gLite is more than just software, it also about
 - Processes, Tools and Documentation
 - International Collaboration
