

Quality Assurance and Documentation of Results

Wednesday 11 May 2005 14:55 (20 minutes)

The coordination for the Hardware Commissioning (HC) activities will involve the handling of a large quantity of documents (test sequences and procedures, technical notes, schedules, test results, etc) which must be related to both the hardware baseline databases and the general planning files. This talk will describe the main ideas on how all the information related to the coordination for Hardware Commissioning will be structured and managed with the ultimate goal of integrating commissioning data within the Manufacturing and Test Folders (MTF) of the different equipment and of the Hardware Commissioning itself. In this way, the Quality Assurance process will be completed.

The user requirements for a logbook for the Hardware Commissioning activities will also be discussed.
