

# Introduction to Grid Computing in Korea

August 29, 2005

Jysoo Lee, Ph.D  
Director of Supercomputing Center  
KISTI, Korea

# Contents

- Overview of K\*Grid
- Building of K\*Grid Infrastructure
- K\*Grid Middleware/Service Activity
- Application Researches of K\*Grid
- Grid Forum Korea
- Future Plans

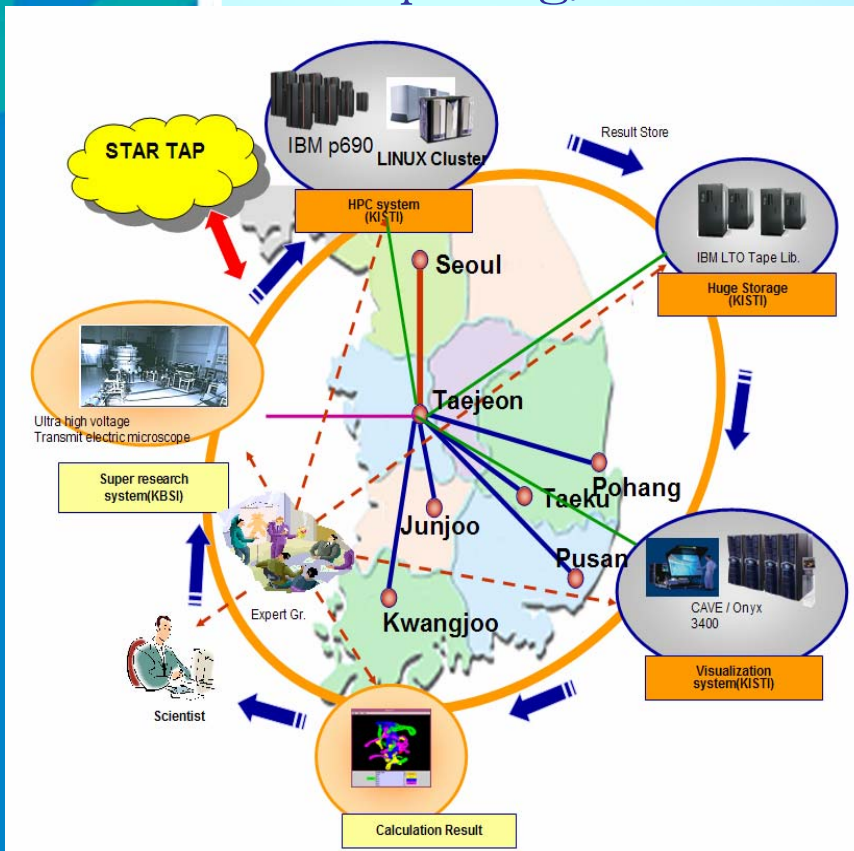

# Overview of Korea Grid Project (K\*Grid)

# Introduction of K\*Grid

- Goal : Implementation of the National Grid infrastructure in Korea
- Fund : Government level support by MIC
  - Period : 2002 - 2006 (5 Years)
  - Total budget : about U\$ 32M
- Leading organization : KISTI
- PI of K\*Grid Project: Dr. Jysoo Lee
- Partners : Various research partners selected from academia, industry, and government lab. through a public competition

# Concept of K\*Grid

- Efficient utilization of distributed computing/scientific resources

Increment of research capacity  
=> Next generation internet business model

Grid Application Project  
IT, BT, NT, ET applied science & semiconductor, automobile, steel, machine industries

Grid Middleware

Computing Resources, Scientific Instrument

KOREN, KREONET, etc. high speed network

## Scopes of K\*Grid (1/2)

- Grid Forum Korea (GFK) :
  - Outreach program for Korean Grid community and international collaboration for standardization
  
- Construction of K\*Grid Infrastructure
  - Phase I (2002~2004) : Experimental Grid testbed for the pilot K\*Grid applications
  - Phase II (2005~2006) : Production-level Grid infrastructure for the Grid R&D

## Scopes of K\*Grid (2/2)

- Development of Grid Middleware Technology
  - KMI-R1 (K\*Grid Middleware Initiative – Release 1) : Integrated Grid middleware service package
  - MoreDream : Grid middleware toolkit based on OGSi
  
- Research on Grid Applications
  - Phase I (2002 ~ 2004) : Molecular simulation Grid, Toxicity prediction system, Grid-based remote services for high tech scientific instruments (UHV-TEM)
  - Phase II (2005 ~ 2006) : Rendering Farm, Game Server Administration, Telematics

# Building of K\*Grid Infrastructure

# Introduction to K\*Grid Infrastructure

- A computational Grid testbed for K\*Grid and the other spin-off Grid project in Korea such as National e-Science project and KoCED etc.
- Phase I (2002~2004) : Experimental Grid testbed for the pilot K\*Grid applications
  - Consists of 12 resource providers in Korea, most of them are small-scale clusters and supercomputers
  - Provides basic Grid services based on non-Web Services Globus Toolkit and MPICH-G2
- Phase II (2005~2006) : Production-level Grid infrastructure for the Grid R&D
  - Consists of sustainable Teraflops clusters and large-scale data storages
  - Provides advanced Grid services based on Web Services Globus Toolkit and MPICH-G2
- Hope to interconnect with the other international Grid projects such as EGEE and PRAGMA, etc.

# K\*Grid Infrastructure : Future Plans

- Construction of a production-level Grid infrastructure with tera-scale computing resources in Korea
- Global collaboration with the international Grid project such as EGEE, PRAGMA, etc.

# K\*Grid Resources

# K\*Grid Service

- Development of Web-based Grid Service Platform
  - Ongoing project: April ~ Dec. 2005
  - Features:
    - ✓ Web-based Grid Service user environment
      - SSO(single sign-on) of accesses to Grid resources
      - Offers personal accounting information
      - Individual job status monitoring
    - ✓ Resource monitoring environment
      - Web Service based monitoring module
      - Monitoring integrated database
    - ✓ Accounting environment
      - Accounting information from various queuing system
    - ✓ Job, Application, Usage, Monitoring Management

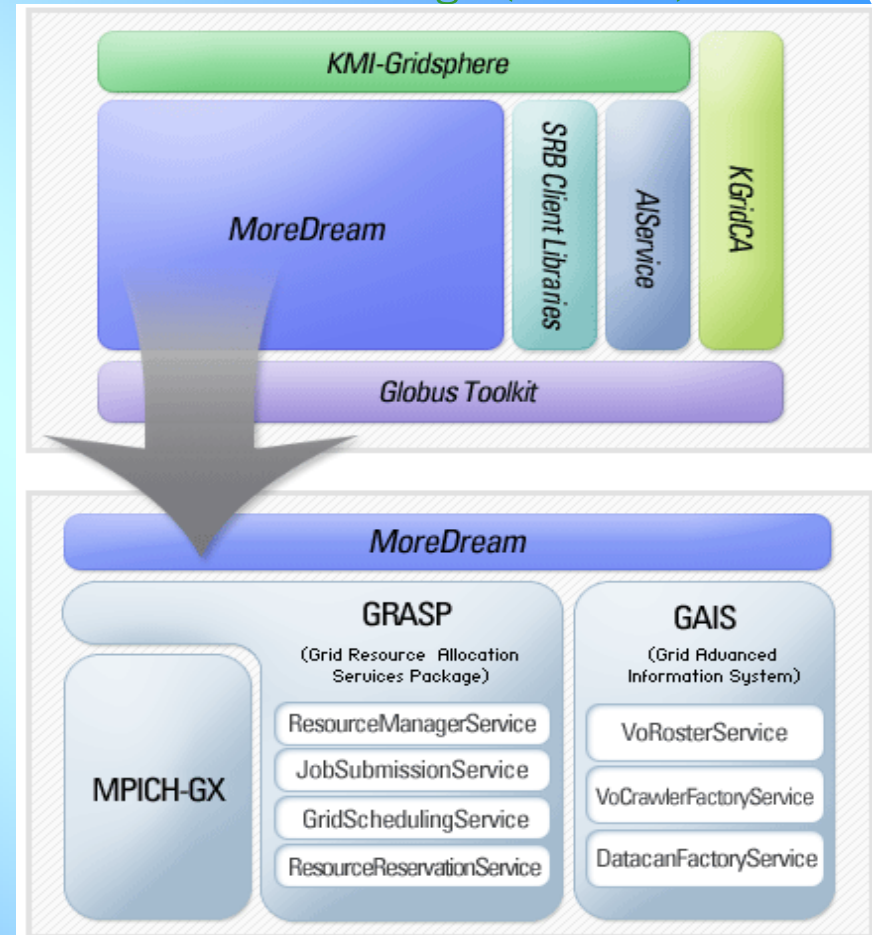

# K\*Grid Middleware/Service Activity

# KMI-R1

(K\*Grid Middleware Initiative – Release 1)

- An integrated Grid middleware package
  - Making scientists able to set easily the computational Grid and data Grid environment for their researches
  - harnessing all the advantages of Grid in their fingertips
- Developed for helping to build K\*Grid infrastructure, but not limited for it
- OGSI based Toolkit

## Grid Service Package (KMI-R1)

Grid Middleware Toolkit (MoreDream)  
Structure

# MoreDream: Grid Middleware Toolkit

- Goal :
  - To develop a Grid middleware which makes possible to organize a Grid environment easily
- Research Items
  - Resource management : GRASP
  - Grid information service : GAIS
  - Grid-enabled MPICH : MPICH-GX
- Middleware Implementation
  - Conforms to OGSI specification

# MoreDream: GRASP

- Grid Resource Allocation Services Package (GRASP)
  - A package of Grid services which are related to resource allocation process in Grid
  - A tool for users to submit jobs easily to Grid environment
- Main Features
  - Job submission & allocation services based on OGSI
  - Supporting MPI-based HPC job and HTC job
  - Automatic resource selection by Grid scheduling mechanism
  - Enhancement of reliability of resource selection with resource reservation
  - File staging in/out from/to SRB server via SRB enabled globus-url-copy
  - New job submission language, JRDL (Job & Resource Description Language), for resource matchmaking

# MoreDream: GAIS

- Grid Advanced Information System (GAIS)
  - A package of Grid services which are related to provide mechanisms for discovery and monitoring resources
  - Indexes service data carrying state information from multiple Grid service instances
- Main Features
  - Universal VO information management
  - Categorization of Grid services
  - Decentralized architecture
  - Flat, dynamic network of directory servers
  - Group mechanism based on OGSI factory approach
  - Query load balancing for efficient VO query
  - Rich information providers
  - User-friendly interface implemented in portlets

## MoreDream: MPICH-GX

- Enables an MPI job to execute through Grid middleware such as GT3 by file based initialization
- Main Features
  - File-based MPI initialization
  - Private IP Support for MPI communication between private IP clusters : MPICH-GP
  - Fault tolerant MPICH by check-point mechanism: MPICH-GF
  - Initialization enabling co-allocation of distributed resources to a job by GRASP

# Other Components of KMI-R1 (1/2)

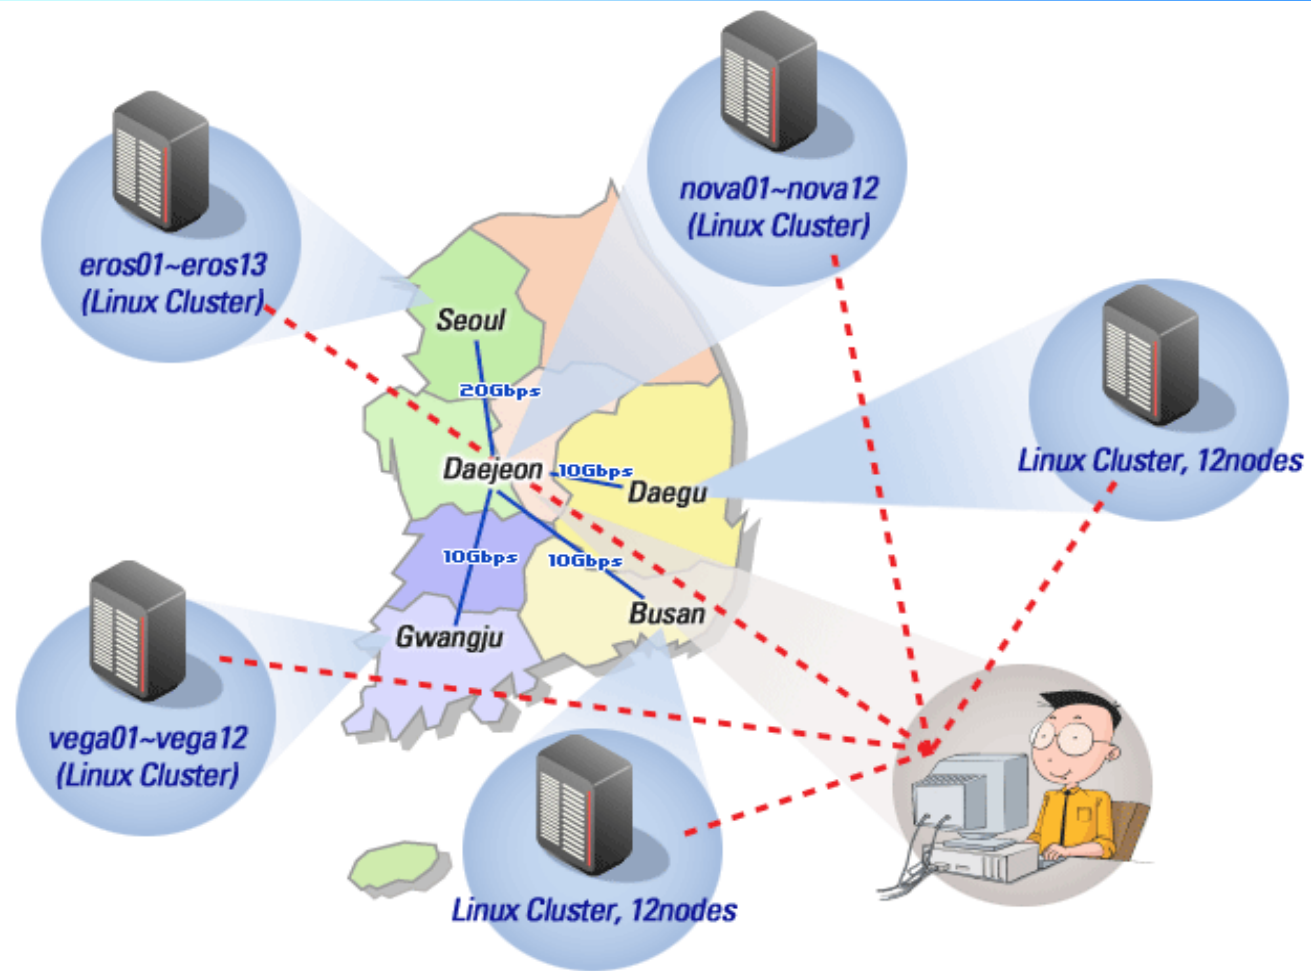

- Globus Toolkit 3
  - Grid core services
  - Reference implementation of OGSI specifications
  - Software services and libraries for resource monitoring, discovery, management, security and file management
- SRB (Storage Resource Broker) Client Libraries
  - For access to data in SRB server by GRASP
  - To show replica info in SRB server by GAIS
- KGridCA System
  - Certificate Authority for K\*Grid Testbed operation
  - Certificate Management (Requesting, Issuing, Storing) by Web browsers
  - Email Notification (CSR (Certificate Signing Request) Upload, Certificate Issue)
  - Providing Web user interface (<http://ca.gridcenter.or.kr>)
  - Approved as a production-level CA by ApGrid PMA

# Other Components of KMI-R1 (2/2)

- AIService (Accounting Information System)
  - OGSi-compliant Service which gathers resource usage information from heterogeneous platforms and provides it as a standard format
  - Provide a portlet for Grid accounting information working on the GridSphere portal
- KMI-GridSphere
  - Portal framework from GridSphere with MoreDream Grid service portlets – GRASP job submission & GAIS information provision
  - Portlets compliant with JSR

KMI (K\*Grid Middleware Initiative) is an integrated Grid middleware package which makes scientists able to set easily the computational Grid and data Grid environment for their researches and harness all the advantages of Grid in their fingertips. KMI is developed for building K\*Grid infrastructure, but not limited for it.

News

- KMI-R1 alpha has been released. [2005-01-19]
- KMI website open. [2005-01-07]

## Milestone for KMI-R1

- KMI-R1 Package Release & Evaluation
  - Version Alpha Release : Jan. 19, 2005
  - Version Beta Release : Jul. 15, 2005
  - Version 1.0 Release : Oct. 2005
- KMI-R1 is under evaluation at KMI-R1 Testbed

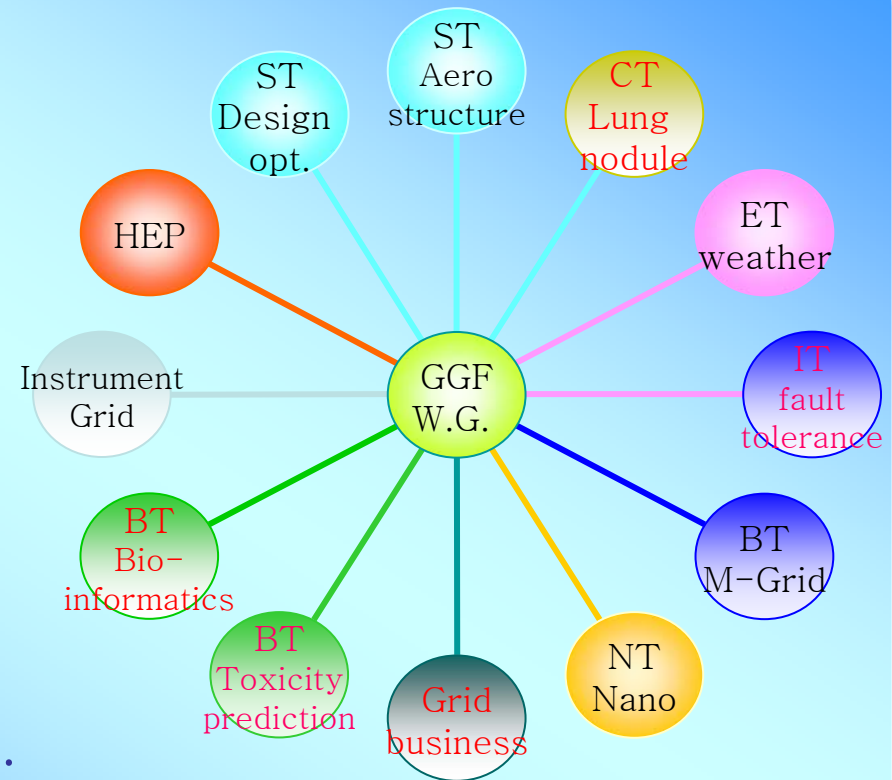

# Application Researches of K\*Grid

# Researches on Grid Application

## Phase I (2002 ~ 2004)

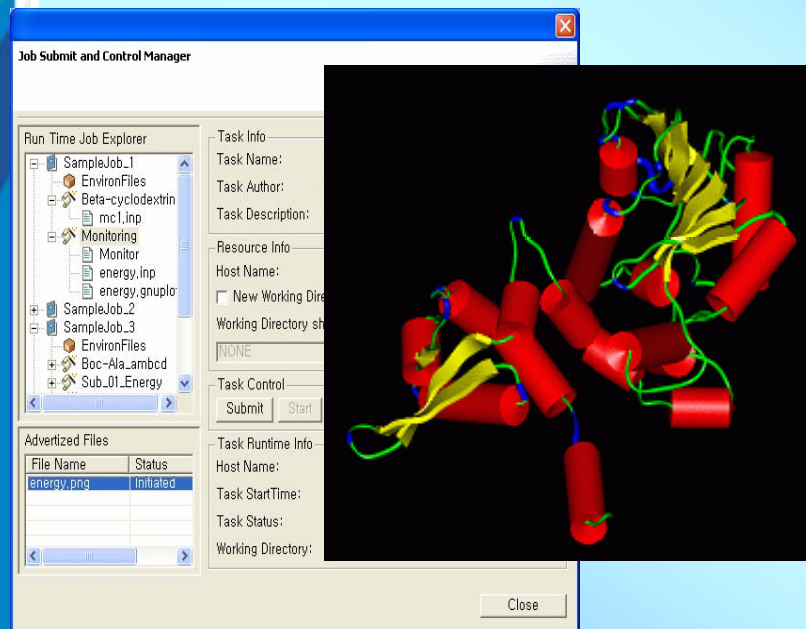

- Molecular simulation Grid
- Toxicity prediction system
- Lung nodule detection/analysis system
- Grid-based weather forecasting system
- Grid-based remote services for high tech scientific instruments : UHV-TEM
- Bio-informatics

Areas of 1st Phase

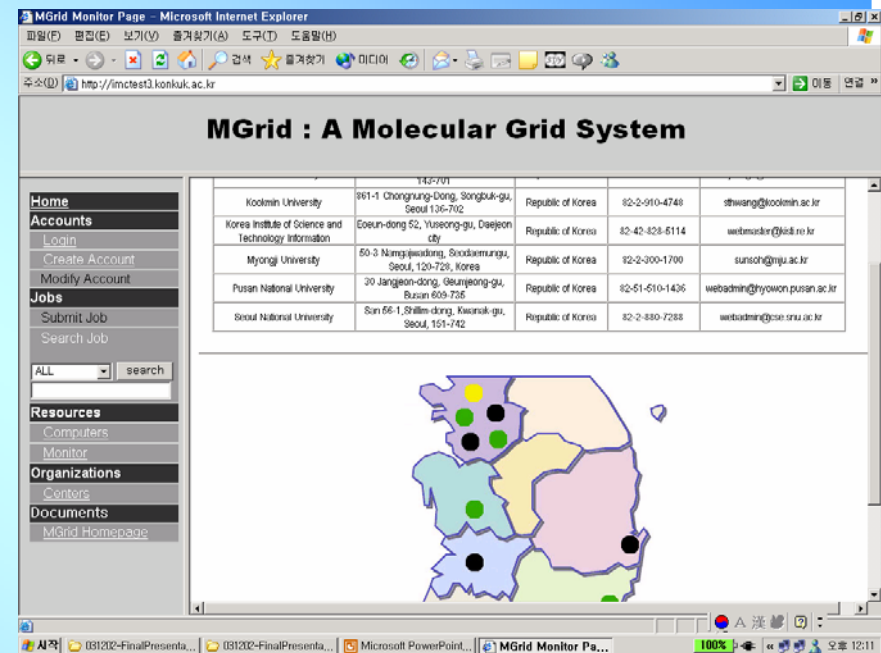

# K\*Grid Application : Bio I

## ■ Molecular Simulation Grid

### Support methods:

- Execution time prediction
- Task migration
- Hierarchical scheduling

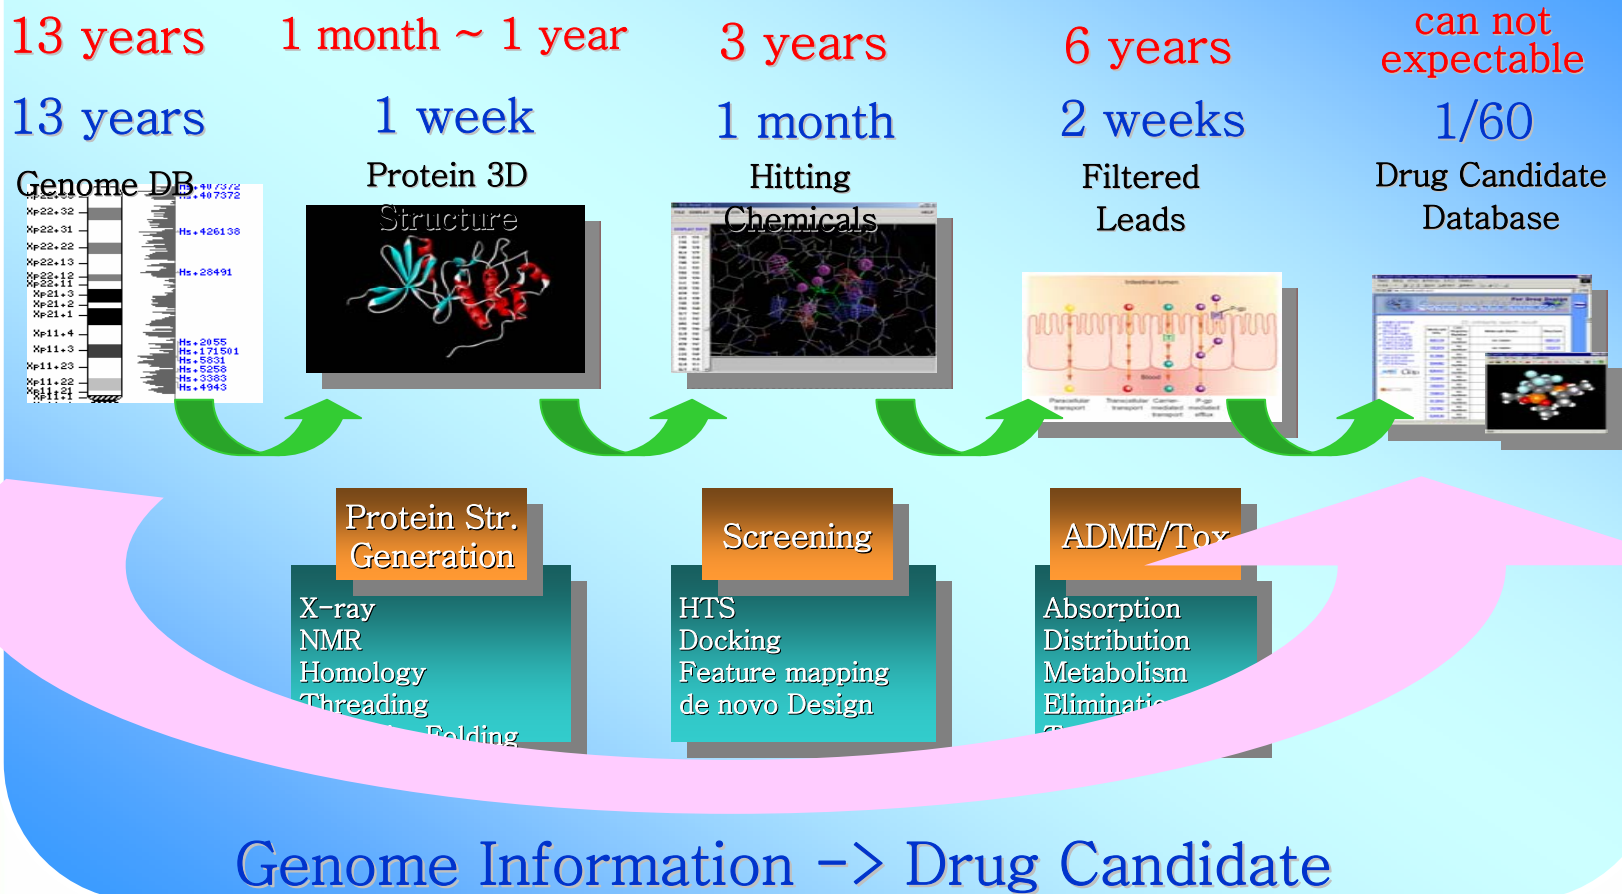

### Support methods:

- Real time monitoring for remote simulation tasks

# K\*Grid Application : Bio II

## ■ Toxicity Prediction System

### Human G2C System (Time)

# K\*Grid Application : Bio III

- Virtual Screening and Toxicity Prediction System
  - Meta Scheduling Framework (MSF) can prevent wasting resources by allocating resources to a job optimally

Virtual Screening

MSF Workflow

# K\*Grid Application : Medical

## ■ Lung Nodule Detection

- Increase the efficiency, speed, and accuracy of diagnosis by automating manual work to detect lung nodules on CT image.
- Development of automatic lung nodule detection system by using the image processing technique
- Implementing rapid analysis system of lung nodules of many patients by grid computing

Lung Surface Registration

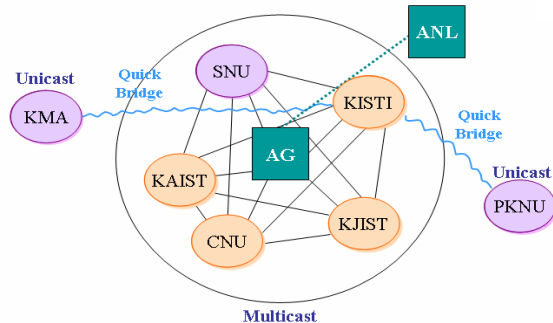

# K\*Grid Application : Weather Modeling

- Virtual Lab. for Weather Modeling

- Improved forecasting capability: 10km → 5km

# K\*Grid application : IT

- Phase II (2005 ~ 2006)
  - Extension of Grid technology through presentation of Grid Application Model in IT
  - Development of technology for high quality IT service using Grid Technology and environment
  - Presentation of Grid Adoption Model through analyzing IT applications included in the IT839 Strategy and apply to some IT applications
  - Telematics, On-Line Game, Rendering Service(2005)

# Grid Based Telematics Service

## ■ Objectives

- Development of 3D realistic image contents service in Grid environment
- Create benefit model for Grid-based Telematics service

## ■ Significance

- To enhance processing capacity of server using Grid resource allocation or discovery service
- To apply to the field of providing high volume contents service

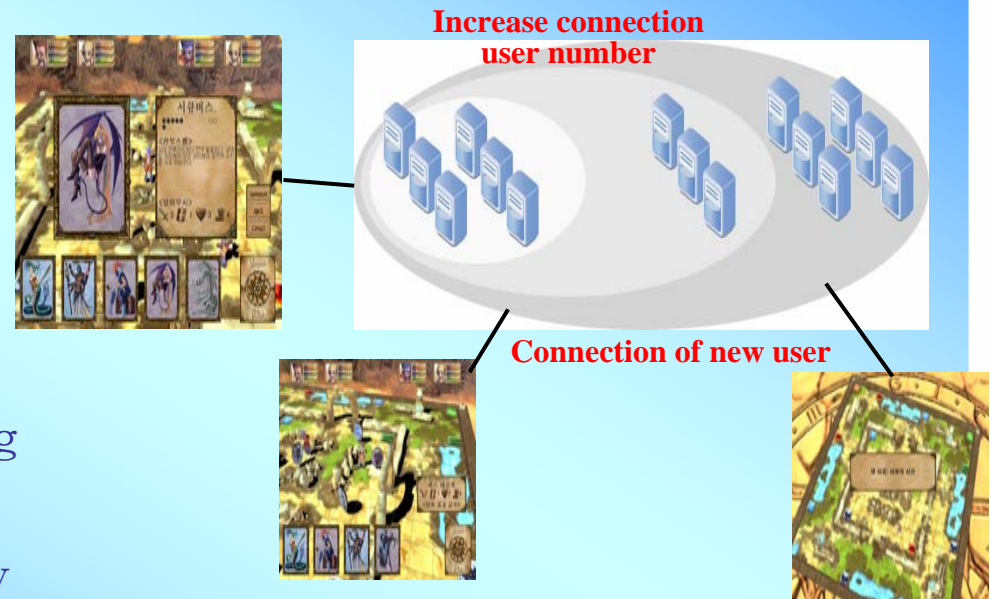

# Grid Based On-Line Game Service

## ■ Objectives

- Design and implementation of On-line game server technique on Grid environment
- Development of client program for demonstrating Grid-based on-line game server

## ■ Significance

- To enhance processing capacity of server using Grid resource allocation or discovery service
- To present possibility of Grid in field of on-line game

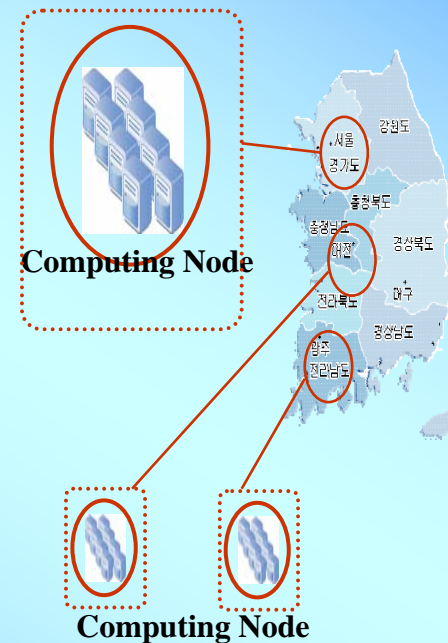

# Grid Based Rendering Service

## ■ Objectives

- Development of infra system for rendering service on Grid environment
- Accomplishment of commercial or non-commercial rendering project on infra system

## ■ Significance

- To present Rendering Service Model through rendering farm constructed using Grid technology
- To create benefit model for Grid-based Rendering service

# Grid Forum Korea (GFK)

# Grid Forum Korea (1/2)

- Goals :
  - Introduction and deployment of Grid new technology
  - Grid technology support for research, grand challenge project and international collaborative research
- Statistics (as of May 2005)
  - 903 members from 254 organizations & 25 WGs

## Working Groups

Application Area : 10 WGs  
 Middleware Area : 6 WGs  
 Network Area : 2 WGs  
 Etc. : 7 WGs

## Participating Individuals

Government Institution : 41  
 University : 105  
 Research Institute : 485  
 Industry : 272

- Workshops
  - 2002 GFK Summer Workshop (July 11-12, 280 participants)
  - 2002 GFK Winter Workshop (Dec. 10-11, 200 participants)
  - 2003 GFK Summer Workshop (Aug. 19-21, 200 participants)
  - 2003 GFK Winter Workshop (Dec. 1 - 2, 200 participants)
  - 2004 GFK Summer Workshop (Aug. 26-27, 200 participants)
  - 2004 GFK Winter Workshop (Dec. 2 - 3, 250 participants)
  - GGF13/GFK 2005 Workshop (Mar. 13-16, 700 participants)

# Future Plans

# Future Plans

- Establish next generation internet service infrastructure through Grid-based virtual integration of IT resources and IT New Growth Engines (Ex: Mobile Comm., Telematics, Intelligent Service Robots, S/W solution and Digital Contents, Home Network and Embedded S/W, BcN, etc)
- Increase R&D productivity and create economic driving forces through sharing nation-wide Grid resources and liking IT839 strategy
- Generate and support other Grid-based government initiatives: providing K\*Grid infrastructure to KCED, e-Science, e-Health and e-Buisness programs

If you want more information about  
K\*Grid,  
please visit the website:
