

## **X-Ray irradiation on p-type micro-strip detectors with p-spray and moderated p-spray isolations**

*Tuesday 11 November 2008 11:00 (20 minutes)*

Two micro-strip sensors were irradiated with X-ray irradiation facility in Karlsruhe to investigate the change of the inter-strip resistance and capacitance as a function of the received dose. For one of the structures a p-spray isolation was chosen, for the other one a moderated p-spray.
