

GRNET/UoA Testbed features at a glance

*Kostantinos Koukopoulos
Prague, 05/11/2008*

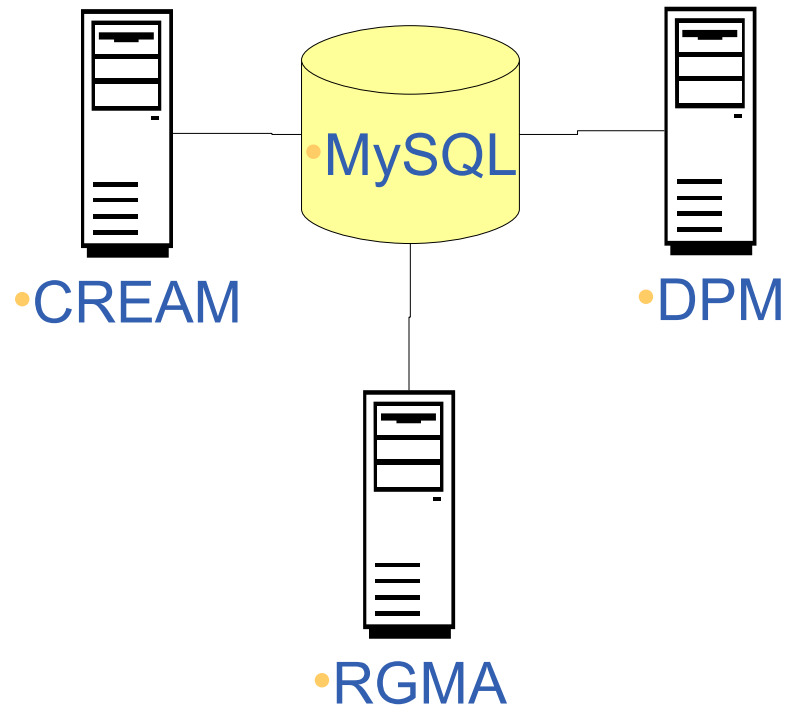

- **Modular site configuration**
- **Separate CE/Torque setup**
- **Dedicated MySQL server**
- **Cream CE**
- **DPM**
 - Separate head/pool nodes
 - dpm-https
- **Short Lived Credential Service**
- **Short Deadline Jobs**

- **YAIM support a modular configuration style**
- **This is not so commonly used**
- **Our testbed uses the following configuration (yaim-4.0.5)**
 - edgusers.conf
 - siteinfo
 - group.d
 - services
 - site-info.def
 - vo.d
 - users.conf
 - wn-list.conf
- **Bugs found (e.g. 40652, 33928, 40654)**

Single MySQL server on separate node

Databases served

- **accounting (RGMA)**
- **cnsdb (DPM)**
- **dpmdb (DPM)**
- **delegationdb (CREAM)**
- **creamdb (CREAM)**

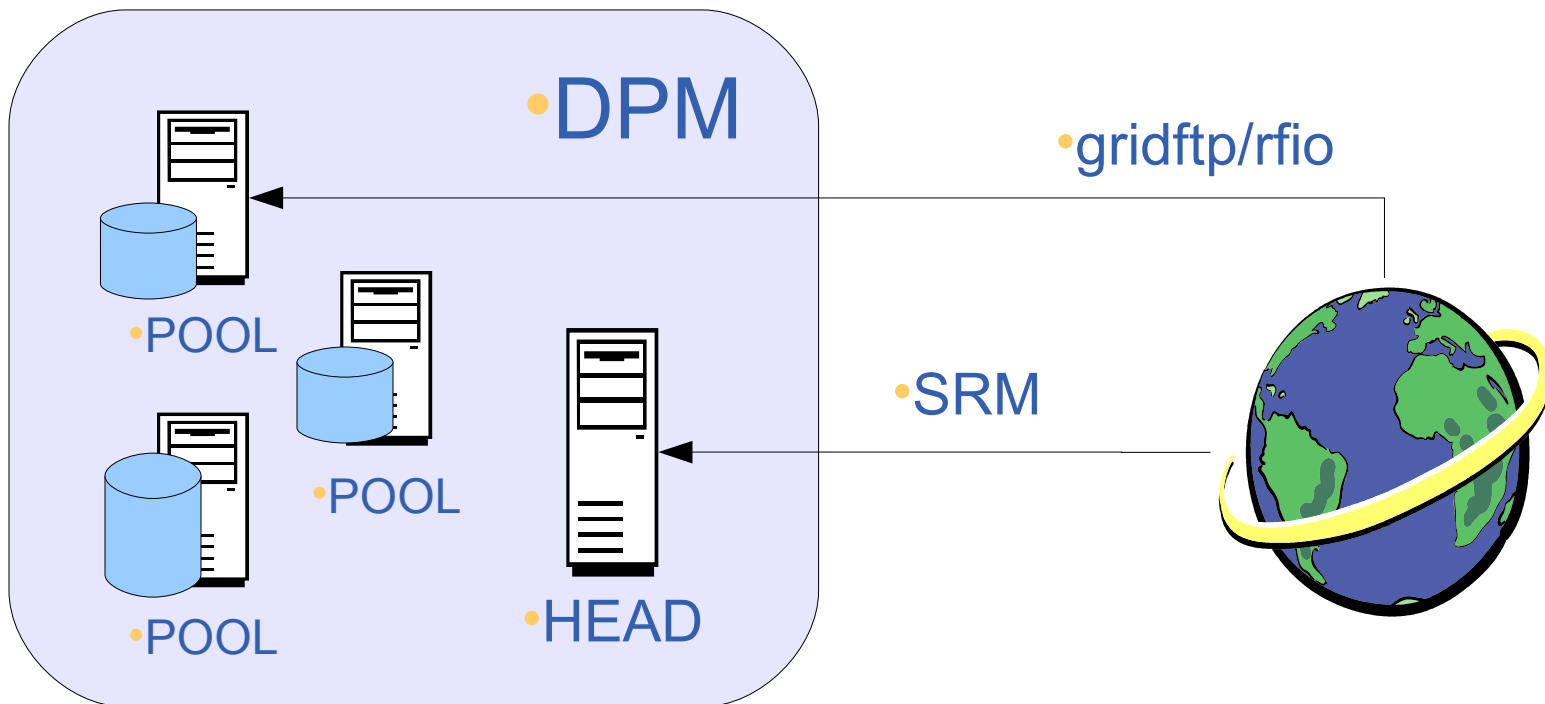

- **Different service requirements**
 - e.g. Cream CE needs ref. Integrity (INNODB) not others (bug 40669)
- **Installation of one service may interfere with others**
 - YAIM will overwrite permissions sometimes
 - There are no common yaim functions for remote MySQL

- **Testing pathways**
 - Direct submission with command line tool or through API
 - Through a WMS via ICE (unavailable)
- **Tested Features**
 - Installation (e.g. bug 3911, separate LRMS node problems etc.)
 - Stress test
 - Integration with LRMS
 - Monitoring

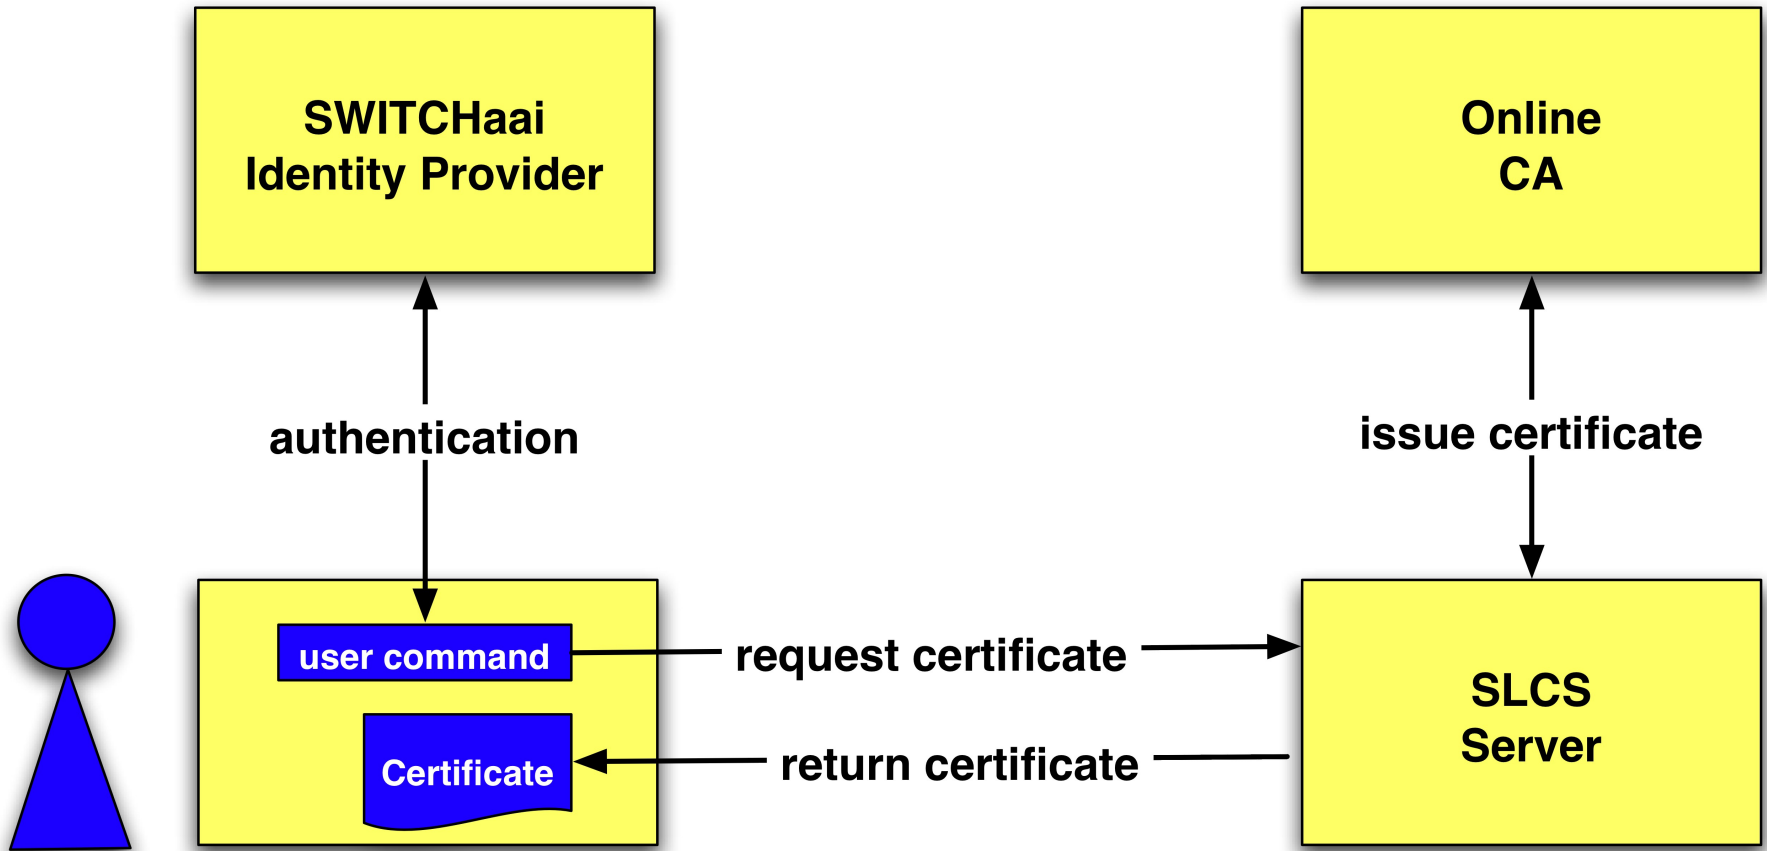

Separate Head/Pool Nodes:

- **DPM feature by design**
- **Scalability improvements**
 - In storage space
 - In throughput
- **Deployment issues in yaim**

- **Access w/ HTTP GET and POST**
- **Apache voms authentication**
- **Yaim conf var: DPM-HTTPS**
- **Worked but is now broken (checked during last yaim core certification with DPM-xxx 1.6.10)
caused by dpm head/pool separation**

- **Users must be authenticated before accessing services.**
 - In the Grid user identity is asserted via X.509 trust
 - In a Shibboleth AAI federation user identity is asserted by the IdP
- **SLCS provides grid/aai interoperability**
- **X.509 procedures avoided while middleware unaffected**
- **Bugs creep out of nowhere, testing important**
 - e.g. Special characters in DNs

- Image source SWITCH.CH

- Testing with CAS SSO on IdP (SWITCH)
- HTML parser of SSO login page buggy
- Attribute Release Policy unsupported
- Yaim configuration of slcs-client missing
- Future directions :
 - Different SSO's
 - Different IdP pages
 - SOAP enabled IdP
- see patch **1693**

- **A EGEE job is a Short Deadline Job (SDJ) when:**
 - It has a deadline constraint.
 - It is guaranteed to complete in a short time.
 - It is unexpected, ie. there isn't any prior reservation.
- **Manual LRMS configuration needed**
 - implemented and documented at [LAL](#)
 - Torque queues
 - Maui reservations
 - JDL example:
Requirements = RegExp(".*jobmanager.*\.sdj\$",other.GlueCEUniqueID)
- **No yaim functions**
- **More info here**

- For more info see our **Testbed info page** in twiki
- **Thanks!**
