lcg-infosites & lcg-info

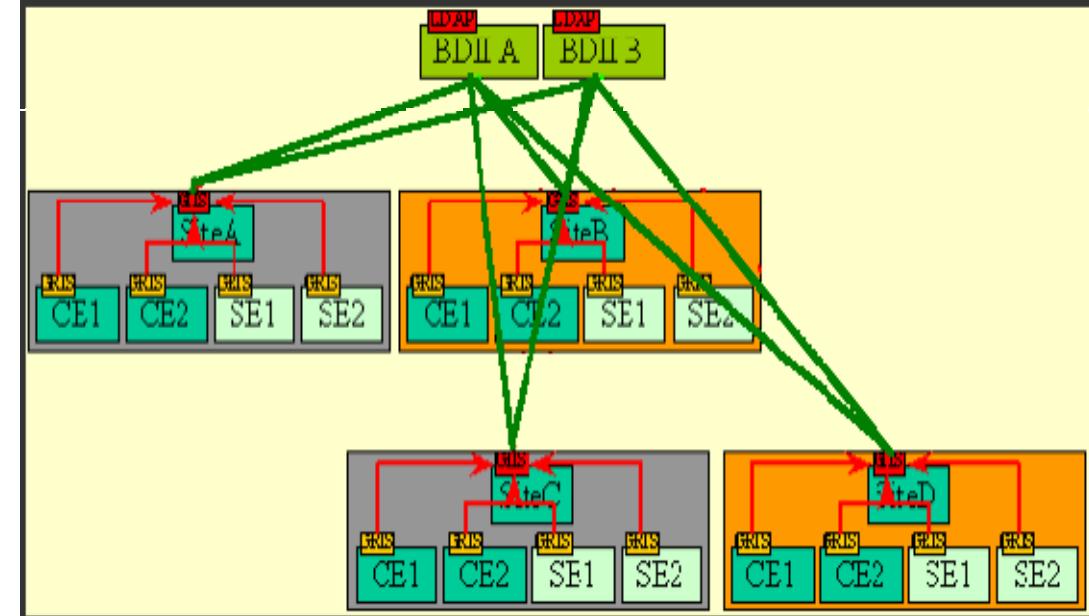

- Once an user is logged into an User Interface (s)he is ready to take advantage of the Grid Power for his/her own application.
- But what are the available resources to accomplish his/her tasks?
- The answer to this question comes through the interactions with the **Information System (IS)**.
- The **Information System (IS)** provides information about the LCG-2 Grid resources and their status.

- The data published in the IS conforms to the **GLUE** (Grid Laboratory for a Uniform Environment) Schema. The **GLUE Schema** aims to define a common conceptual data model to be used for Grid resources.
- In LCG-2, the **BDII** (Berkeley DB Information Index), based on an updated version of the **Monitoring and Discovery Service (MDS)**, was adopted as main provider of the Information Service.
- In gLite, **R-GMA** (Relational Grid Monitoring Architecture) is adopted as IS.

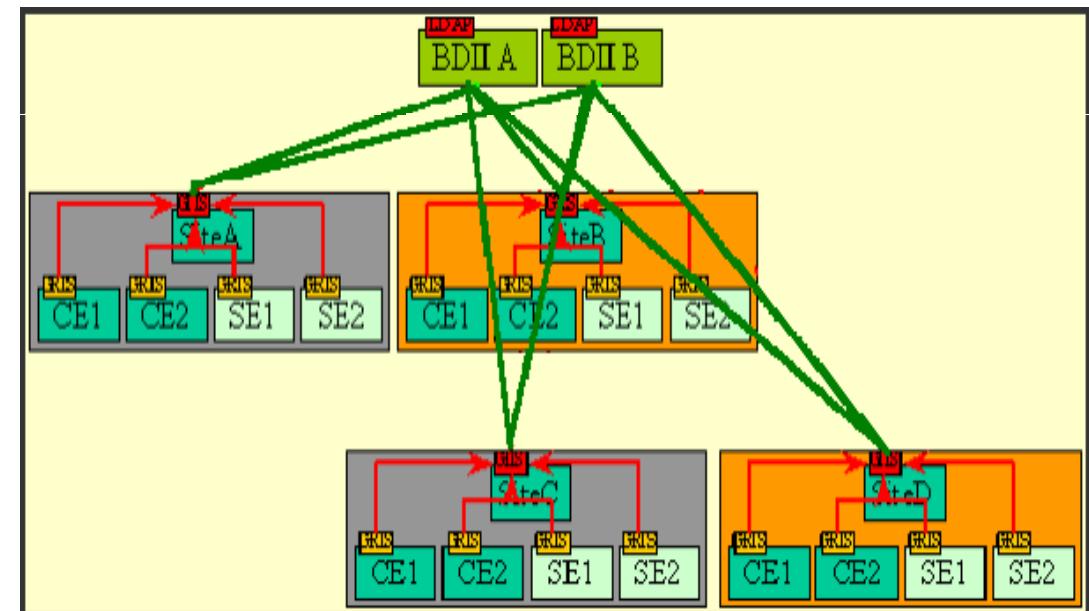

- Computing and storage resources at a site implement an entity called **Information Provider**, which generates the relevant information of the resource (e.g.: the used space in a SE).
- This information is published via an LDAP server by the **Grid Resource Information Servers**, or GRISes.

- In each site an element called the **Site Grid Index Information Server (GIIS)** collects all the information of the different GRISes and publishes it.
- This BDII queries the GIISes and acts as a cache, storing information about the Grid status in its database.

- **Querying the BDII a user or a service has all the available information about the status of the grid resources.**
- **Moreover in order to get more up-to-date information it is possible to querying directly the GIISe or GRISes.**

- In order to query directly the IS elements two higher level tools are provided.

lcg-infosites

lcg-info

- These tools should be enough for most common user needs and will usually avoid the necessary of raw LDAP queries.

- The lcg-infosites command can be used as an easy way to retrieve information on Grid resources for the most use cases.

USAGE: lcg-infosites --vo <vo name> options -v <verbose level> --is <BDII to query>

ce	The information related to number of CPUs, running jobs, waiting jobs and names of the CEs are provided. All these data group all VOs together. With "-v 1" only the names of the queues will be printed while with "-v 2" The RAM Memory together with the operating system and its version and the processor included in each CE are printed.
se	The names of the SEs supported by the user's VO together with the kind of Storage System, the used and available space will be printed. With "-v 1" only the names of the SEs will be printed.
closeSE	The names of the CEs where the user's VO is allowed to run together with their corresponding closest SEs are provided.
lfc	Name of the lfc Catalog for the user's VO.
tag	The names of the tags relative to the software installed in site is printed together with the corresponding CE.
all	It groups together the information provided by ce, se, lrc and rmc.
is	If not specified the BDII defined in default by the variable LCG_GFAL_INFOSYS will be queried. However the user may want to query any other BDII without redefining this environment variable. This is possible specifying this argument followed by the name of the BDII which the user wants to query. All options admits this argument.

\$ lcg-infosites --vo gilda ce

These are the related data for gilda: (in terms of queues and CPUs)

#CPU	Free	Total Jobs	Running	Waiting	ComputingElement

Name of the CE:grid010.ct.infn.it

[..]

- This command can be used to list either CEs or the SEs that satisfy a given set of conditions, and to print the values of a given set of attributes.
- The information is taken from the BDII specified by the **LCG_GFAL_INFOSYS** environment variable.
- The query syntax is like this:

attr1 op1 valueN, ... attrN opN valueN

where *attrN* is an attribute name

op is =, >= or <=, and the cuts are ANDed.

The cuts are comma-separated and spaces are not allowed.

USAGE

lcg-info --list-ce [--bdii bdii] [--vo vo] [--sed] [--query query] [--attrs list]

lcg-info --list-se [--bdii bdii] [--vo vo] [--sed] [--query query] [--attrs list]

lcg-info --list-attrs

lcg-info --help

--list-attrs	Prints a list of the attributes that can be queried.
--list-ce	Lists the CEs which satisfy a query, or all the CEs if no query is given.
--list-se	Lists the SEs which satisfy a query, or all the SEs if no query is given.
--query	Restricts the output to the CEs (SEs) which satisfy the given query.
--bdii	Allows to specify a BDII in the form :: If not given, the value of the environmental variable LCG_GFAL_INFOSYS is used. If that is not defined, the command returns an error.
--sed	Print the output in a "sed-friendly" format.
--attrs	Specifies the attributes whose values should be printed.
--vo	Restricts the output to CEs or SEs where the given VO is authorized. Mandatory when VO-dependent attributes are queried upon.

R-GMA

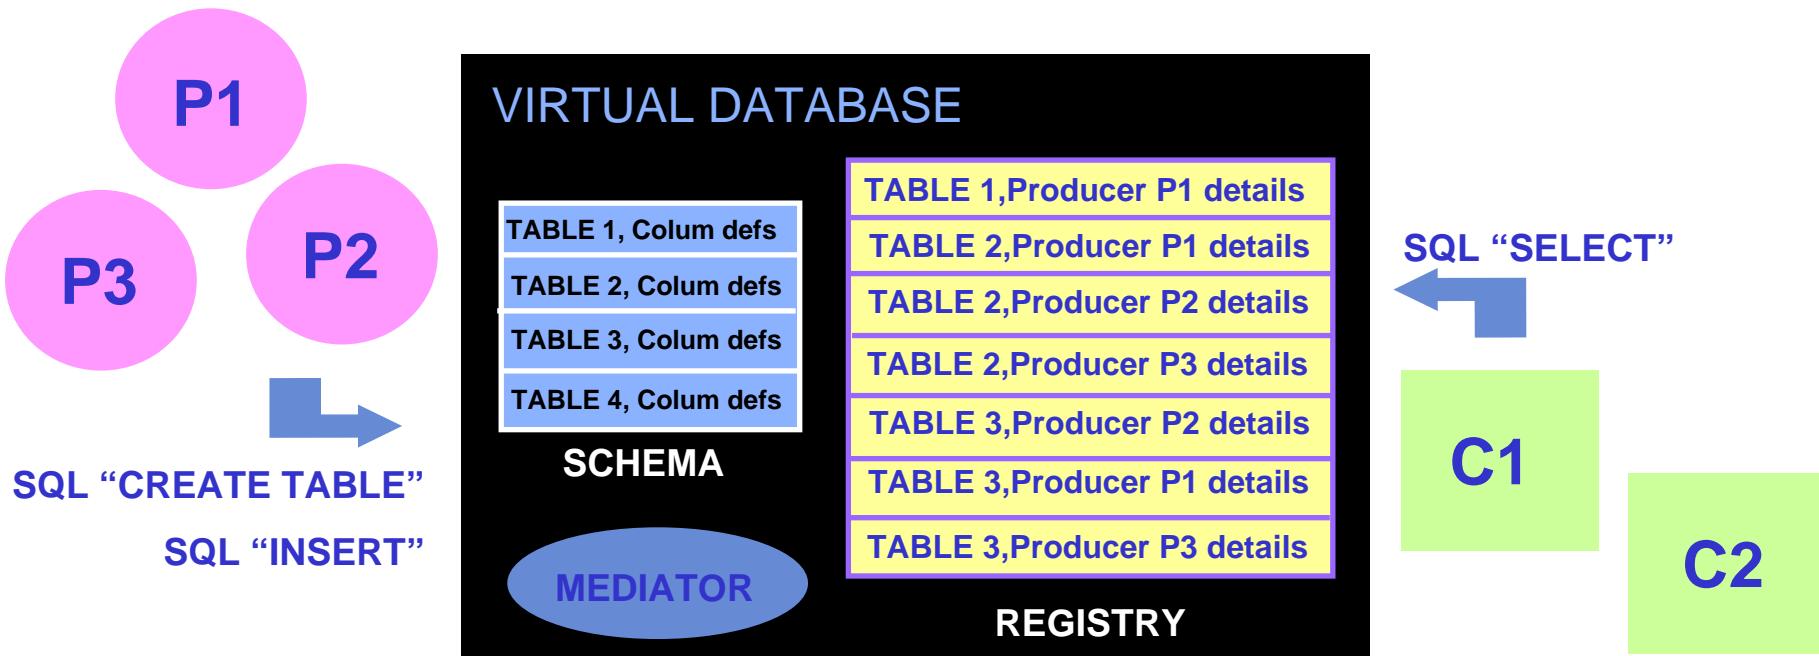

This part covers the following arguments:

- **Introduction to R-GMA.**
- **Grid Monitoring Architecture (GMA).**
- **R-GMA in depth:**
 - Registry, Schema, Producer and Consumer
 - Query Type
 - R-GMA Browser
- **Security in R-GMA.**

- **Relational Grid Monitoring Architecture (R-GMA)**
 - Developed as part of the European DataGrid Project (EDG)
 - Now as part of the EGEE project.
 - Based the Grid Monitoring Architecture (GMA) from the Global Grid Forum (GGF).
- **Uses a relational data model.**
 - Data are viewed as tables.
 - Data structure defined by the columns.
 - Each entry is a row (tuple).
 - Queried using Structured Query Language (SQL).

- The Producer stores its location (URL) in the Registry.
- The Consumer looks up producer URLs in the Registry.
- The Consumer contacts the Producer to get all the data or the Consumer can listen to the Producer for new data.

There is no central repository!!! There is only a “Virtual Database”.

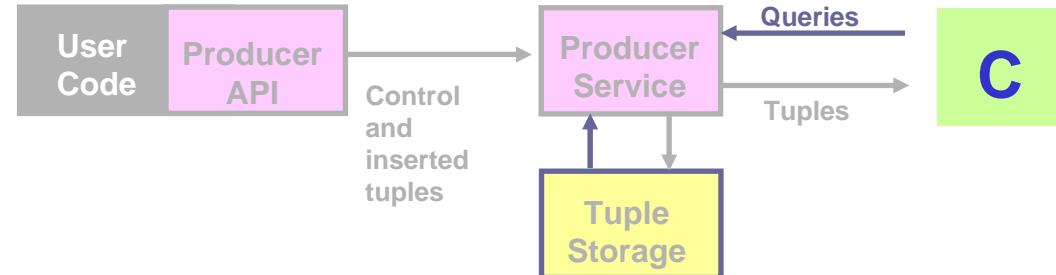

Schema is a list of table definitions.

Registry is a list of data producers with all its details.

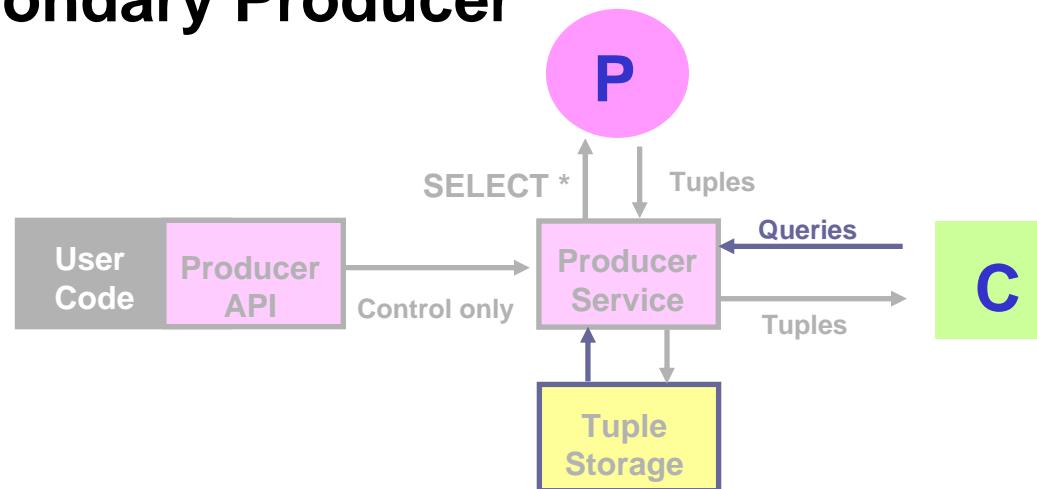

Producers publish data.

Consumers read data published.

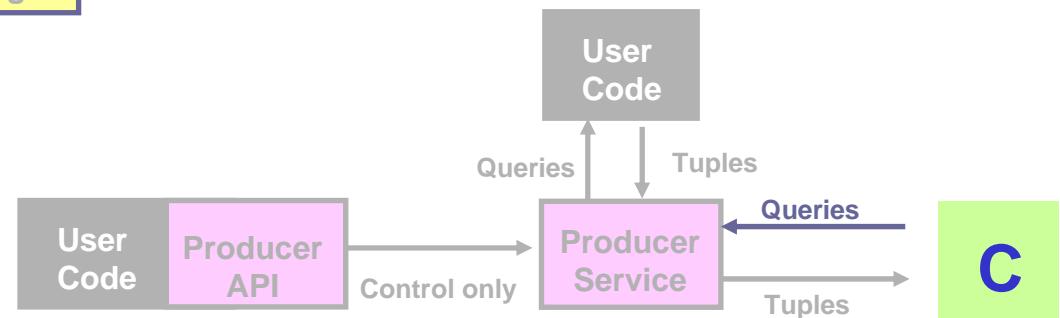

- **Primary Producer**

- **Secondary Producer**

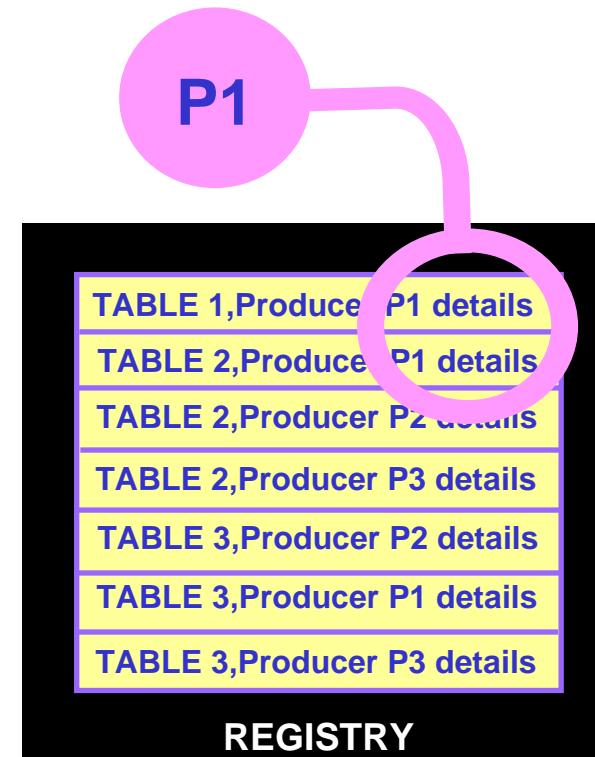

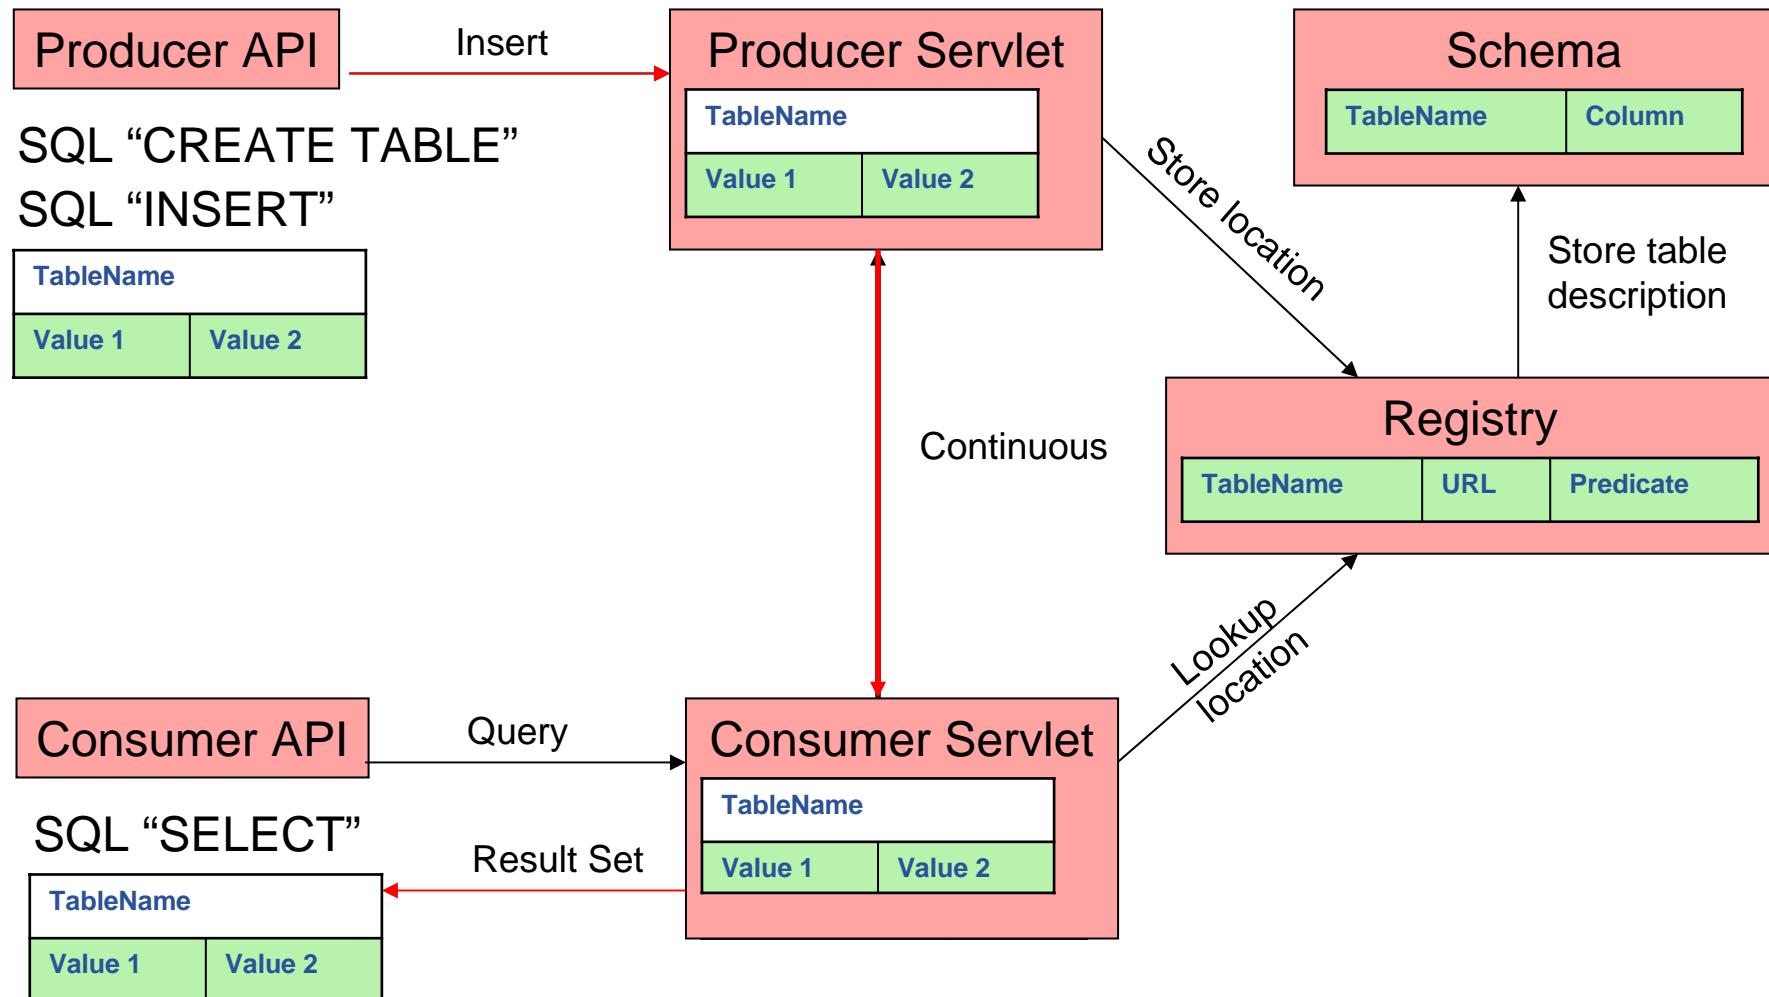

- **On-Demand Producer**

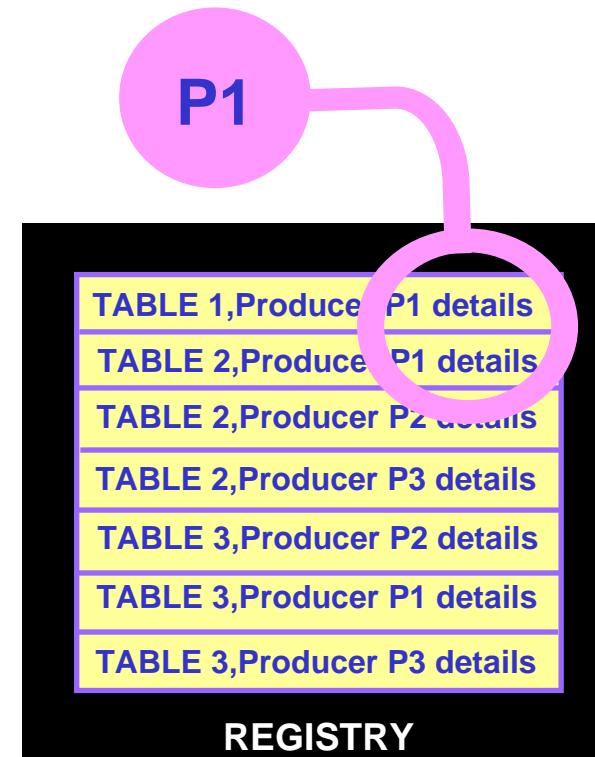

Continuous

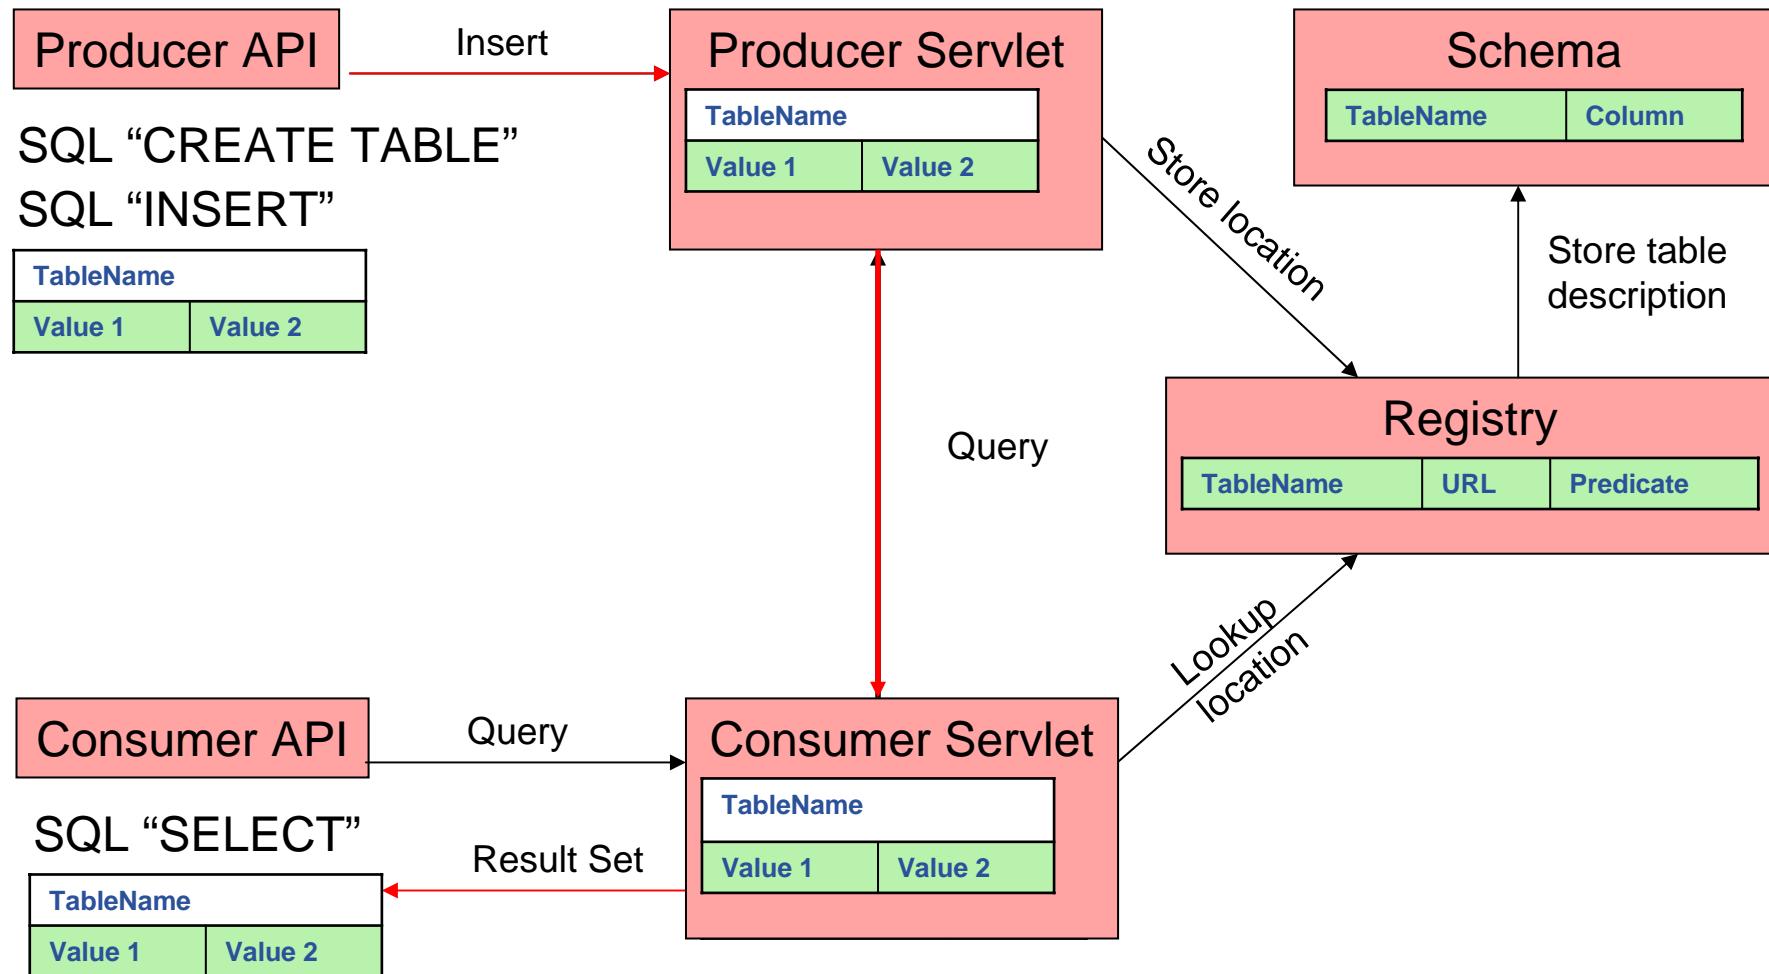

- **Latest**
- **History**
- **Static**

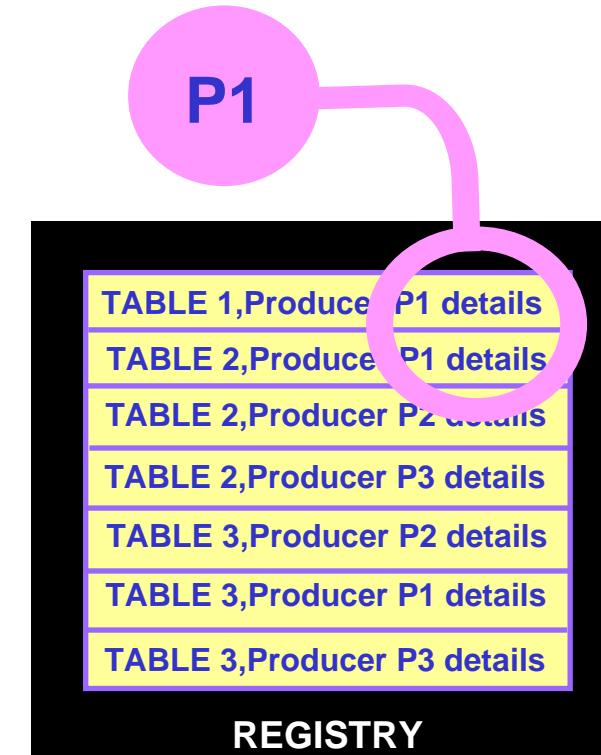

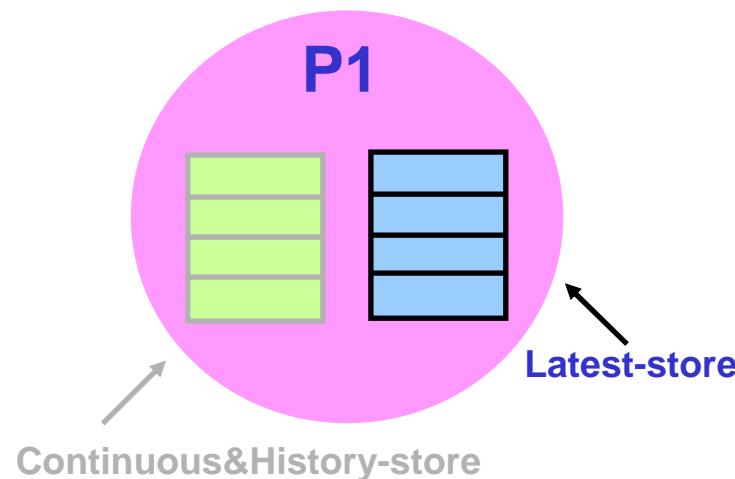

- **Continuous**
- **Latest**
- **History**
- **Static**

- **Continuous**
- **Latest**
- **History**
- **Static**
