

Enabling Grids for E-scienceE

e-Learning Pilot Phase One: Digital Library

*NA3, User Training and Induction
UK National e-Science Centre*

www.eu-egee.org

- Best to take training to the audience - ubiquitous
- Persistency of courses - anytime
- Account for different background & skills
- Rapid response to rising training demands

“I prefer to learn whenever I need to and online!”.

“Experts and trainers under heavy demand. Core training team already supporting events all over Europe and need to train more people within the current constraints”.

- Enhances accessibility to courses - 24/7 availability
- Provides alternative training approaches
- Facilitates prerequisites training/focus on advanced
- Provides collaborative environments for all involved

Knowledge
exchange

Self-paced, peer-to-
peer learning

Need to diversify
training methods

Sharing and
localising training
resources

- Aim: pilot e-learning for delivering the EGEE project's NA3 training requirements
- Objectives:
 - To source learning objects and metadata of various resource types
 - To pilot a service-oriented infrastructure
 - To develop an e-learning based on the service-oriented infrastructure - EGEE Learning Portal
 - To collaborate with the EGEE and other project partners for evaluating project outputs, demonstration and dissemination

- Between April 2005 - March 2006
- A digital library incorporates all phase 1 outcomes
- Phase 1 pilot established a template for subsequent (annual) phases in EGEE 2
- 4 main strand of deliverables
 - Learning Objects & Metadata
 - Service-Oriented Infrastructure
 - EGEE Learning Portal
 - Demonstration & Dissemination

Activity Authoring	Course Validation	Learning Flow	Marking	Sequencing
Assessment	Curriculum	Personal Developm't	Reporting	Tracking
Course Management	Learner Management	Quality Assurance	Resource List
AV Conferencing	Alert / Notification	Annotation / Review	Archiving	Authentication
Authorisation	Calendaring	Chat	Content Adaptation	Content Management
Email	Federated Search	Filing	Format Conversion	Forum
Harvesting	Identifier	Mapping	Messaging	Metadata Management
Packaging	Personalisation	Resolver	Scheduling	Search / Browse
Tracking	Service Registry	User Management	Whiteboard

- e-Learning Framework - <http://www.elframework.org>
- e-Framework - <http://www.e-framework.org/>

Activity Authoring	Course Validation	Learning Flow	Marking	Sequencing
Assessment	Curriculum	Personal Developm't	Reporting	Tracking
Course Management	Learner Management	Quality Assurance	Resource List
AV Conferencing	Alert / Notification	Annotation / Review	Archiving	Authentication
Authorisation	Calendaring	Chat	Content Adaptation	Content Management
Email	Federated Search	Filing	Format Conversion	Forum
Harvesting	Identifier	Mapping	Messaging	Metadata Management
Packaging	Personalisation	Resolver	Scheduling	Search / Browse
Tracking	Service Registry	User Management	Whiteboard

- Content management - wiki approach
- Resource discovery: searching & browsing
- Content sensitive linking (object resolver)

Welcome to EGEE Learning

This website contains information and prototype services for an initiative, EGEE Learning, to pilot e-learning for the [Enabling Grids for E-science \(EGEE\)](#) project which aims to develop production grid infrastructure for scientific purposes. The e-learning pilot is part of EGEE [Networking Activity \(NA3\)](#) to provide user training and induction.

News:

- The EGEE NA3 e-Learning initiative has been announced at the [3rd EGEE Conference](#). See "e-Learning: Requirements, Service Options and Plan" presentation. *20/04/05*

Grid in General: What is grid computing? How does grid relate to e-science? What is *EGEE, CrossGrid, LCG, OSGA, Globus, GGF*? What are the toolkits available for developing grid applications? [Learn more..](#)

is a middleware produced jointly by different academic and industrial research centres from the EGEE Project to underpin grid applications. [Learn more..](#)

- Annotations and comments services
- Personal/localised resource collection management
- Interoperability with other digital library & e-learning environments (export/import)

- Develop open source repository - Fedora
- Storing both metadata and data as managed assets
- Web services (SOAP) APIs for accessing/management repository objects
- Standardisation of access API based on the de facto SRW/U and OpenURL protocols

- Resource discovery services based on Fedora API
 - Simple and advanced search
 - Browse resource (based on type)
 - Results navigation
- Extension to the Fedora API to enable filtering of resources based on distinct" type and years within a results set
- Searching external repositories

- Content management in federated contexts:
- Building on the Fedora service API (-M)
- Wiki services for digital library:
 - Metadata wiki based on W3C XForms (rich user interface)
 - Versioning and history
- Interoperability
 - Exporting objects in e-learning and digital library standards
- Metadata enrichment - reusing existing metadata

Create Resource Stub

Type < Select a type best fit the resource.Title

A resource stub is a piece of object that *doesn't exist* in the library. It is incomplete and requires elaborations. Once created it is available for editing and enhancing by the communities, via the wiki services. *It is subjected to the auditing and review of the library editors.*

See 'stub' for a guideline.

A business-focused guide to the grid computing revolution Best practices, case studies, and resources from IBM's experts Drive unprecedented value from your existing IT investments Simplify IT administration in heterogeneous environments Build flexible, resilient infrastructures that deliver resources instantly IBM Business On Demand Series: Your business blueprint for leveraging the grid computing revolution. When you turn on the light, the power grid delivers exactly what you need, instantly. What if computers and networks could work that way? Now they can...and that will transform the way you do business. Grid Computing is about the "Business on Demand" revolution: delivering the exact technology resources you need, anywhere, anytime, without complexity or high cost. You can do it all, starting right now, starting with your existing systems. Whether you're an executive, strategist, architect, technologist, or developer, this book will show you how. Master the fundamental concepts underlying grid and utility computing Learn how to start and which applications to start with Understand the state-of-the-art in technologies and standards Use grid computing to maximize the value of existing resources Build more flexible, resilient, and available operational infrastructures Deliver instantaneous access to data and resources on a "sense and respond" basis Eliminate the burden of administering disparate, non-integrated systems In Grid Computing, leading IBM experts bring together best deployment practices, practical guidance on integrating existing resources, and up-to-the-minute case studies: all you need to drive business value from the grid computing revolution.
