

Personnel Protection in TCC2

Doris Forkel-Wirth (TIS-RP)

7 December 2001

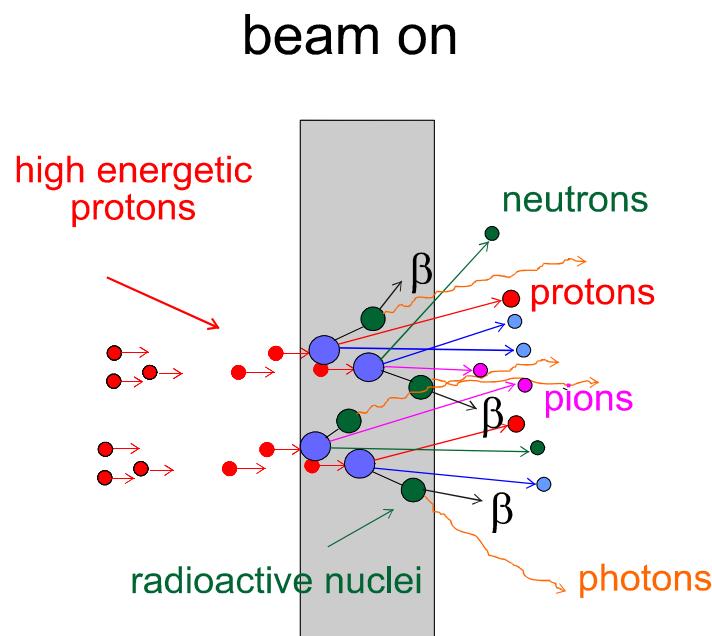

Origin of Ionising Radiation

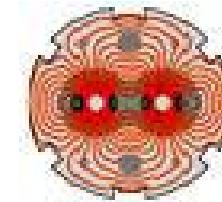

The operation of accelerators involves beam losses

Stray radiation (hadrons, leptons, photons)

Origin of Ionising Radiation

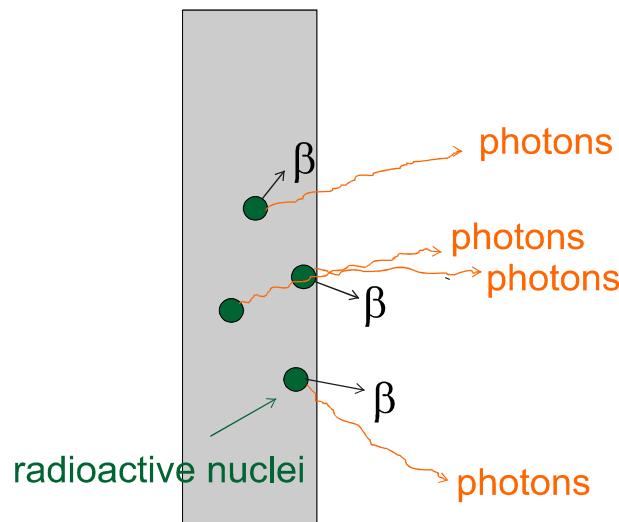

The operation of accelerators involves beam losses

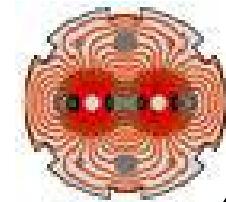

Induced radioactivity in accelerator components,
air, water...

beam off

Absorbed Dose

3

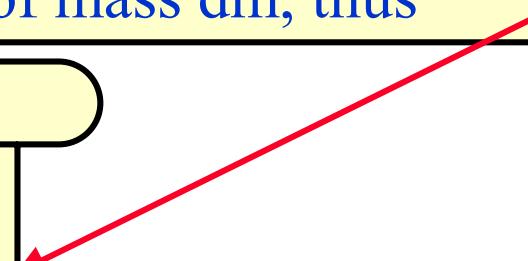

ICRU definition:

The absorbed dose, D , is the quotient of dE by dm , where dE is the mean energy imparted by ionizing radiation to matter of mass dm , thus

$$D = dE/dm$$

Unit: J/kg or Gray
(Gy)

$$1 \text{ Gy} = 1 \text{ J/kg}$$

Reminder:

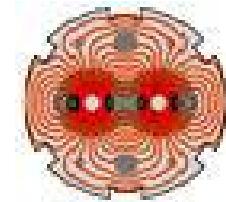

$4185 \text{ J heat } 1 \text{ l of water by } 1 \text{ K}$
but

$3 \text{ mGy (gamma) result in 10 events per cell}$

2

Dose Equivalent

Describes the biological effectiveness of radiation

$$H_T = \sum_R w_R \cdot D_{T,R}$$

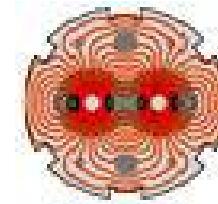

Unit: Sievert (Sv)

w_R:

photons:	1
electrons, muons:	1
neutrons:	
< 10 keV:	5
< 100 keV:	10
< 2 MeV:	20
< 20 MeV:	10
> 20 MeV:	5
alphas:	20

Effective Dose

$$E = \sum_T w_T \cdot H_T = \sum_T w_T \sum_R w_R \cdot D_{T,R}$$

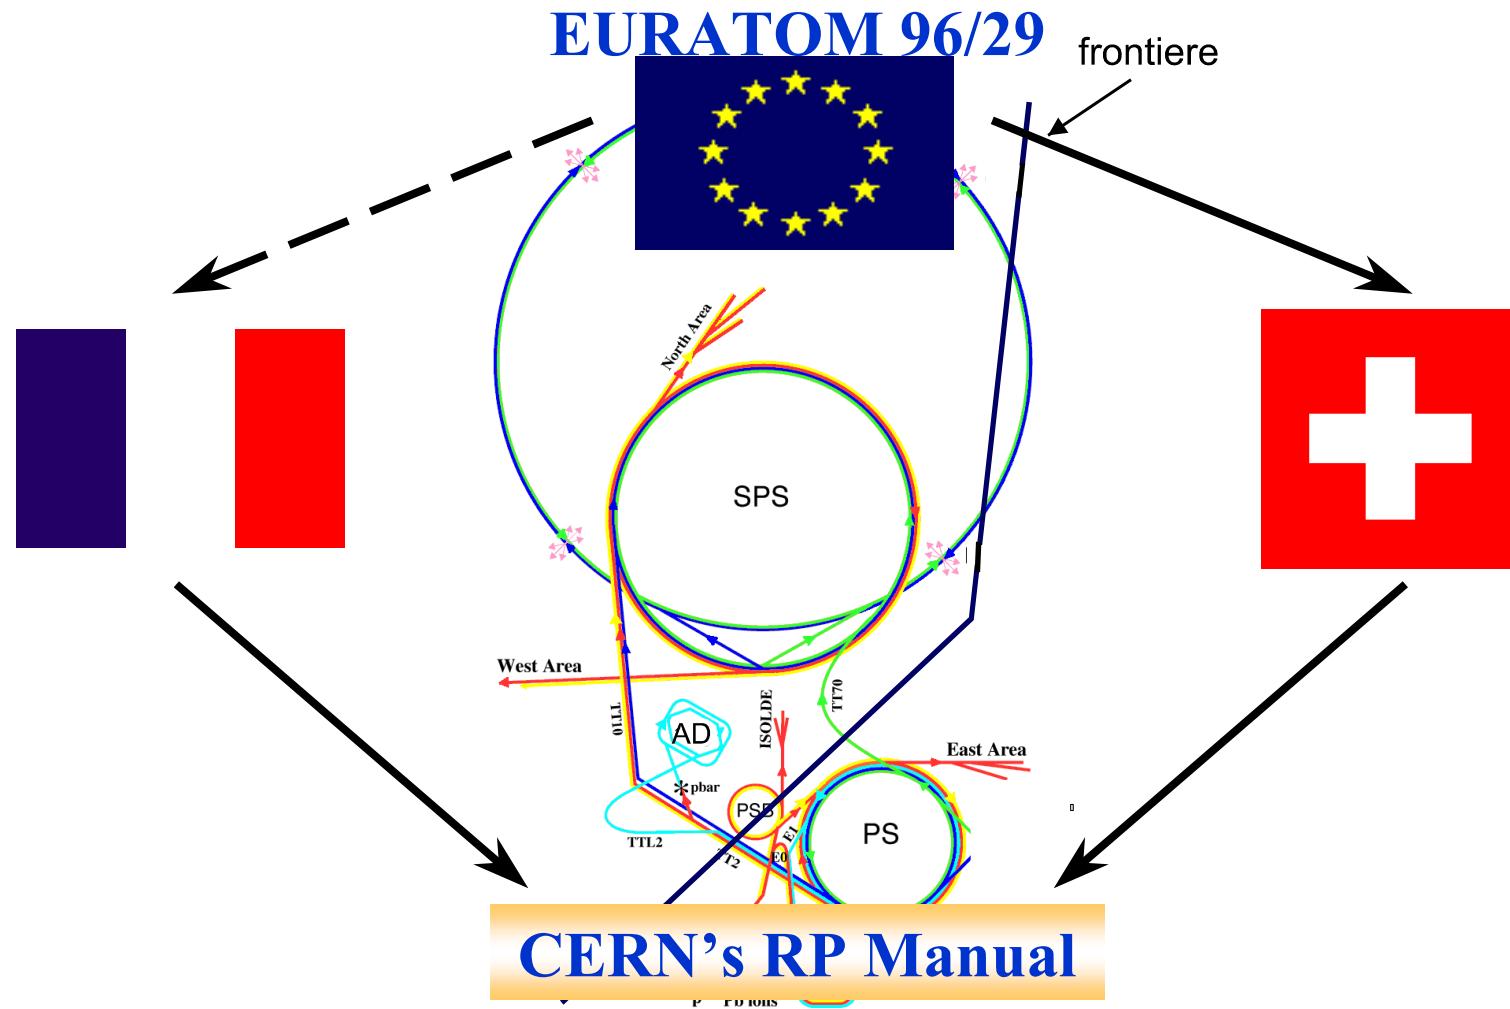

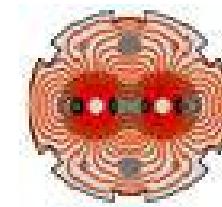

Unit: Sievert (Sv)

w_T	gonads:	0.2
	thyroids:	0.05
	skin:	0.01
	bone marrow (red):	0.12

...

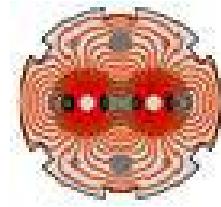

RP Legislation

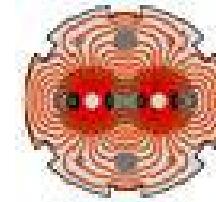

Dose Limits

	<i>Limits per 12-months period (mSv)</i>		
	Public	Exposed Workers	
		B	A
EURATOM	< 1	< 6	< 20
Switzerland	< 1		< 20
CERN	< 1		< 20
France	< X 1	< X 6	< X 20

Radiation Exposure

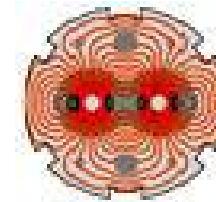

- Geneva area: 2 mSv/year
- Les Contamines: 4 mSv/year
- Chest X-ray: 0.3 mSv,
Computer tomography: 10 - 30 mSv
- Geneva - New York - Geneva: 30 μ Sv
- One month in outer space: 15 mSv

Thanks to M. Jonker / SL

Radiation Exposure Effects

- Lethal limits

• amoebas	3000 Sv
• escargot	200 Sv
• human	3 Sv (50% survival chance)

- Non lethal/direct effects:

- 700 mSv digestive problems

- 200 mSv bone marrow destruction

- Genetic effects

- Delayed effects:

- Cancer ... (400 mSv total dose during working life =>

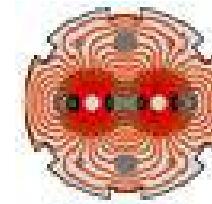

0.5 % chance to die on professional induced cancer)

- Unknown how effects scale to very low levels, due to built in repair mechanisms in human body

Hence, intelligent live forms protect themselves against radiation.

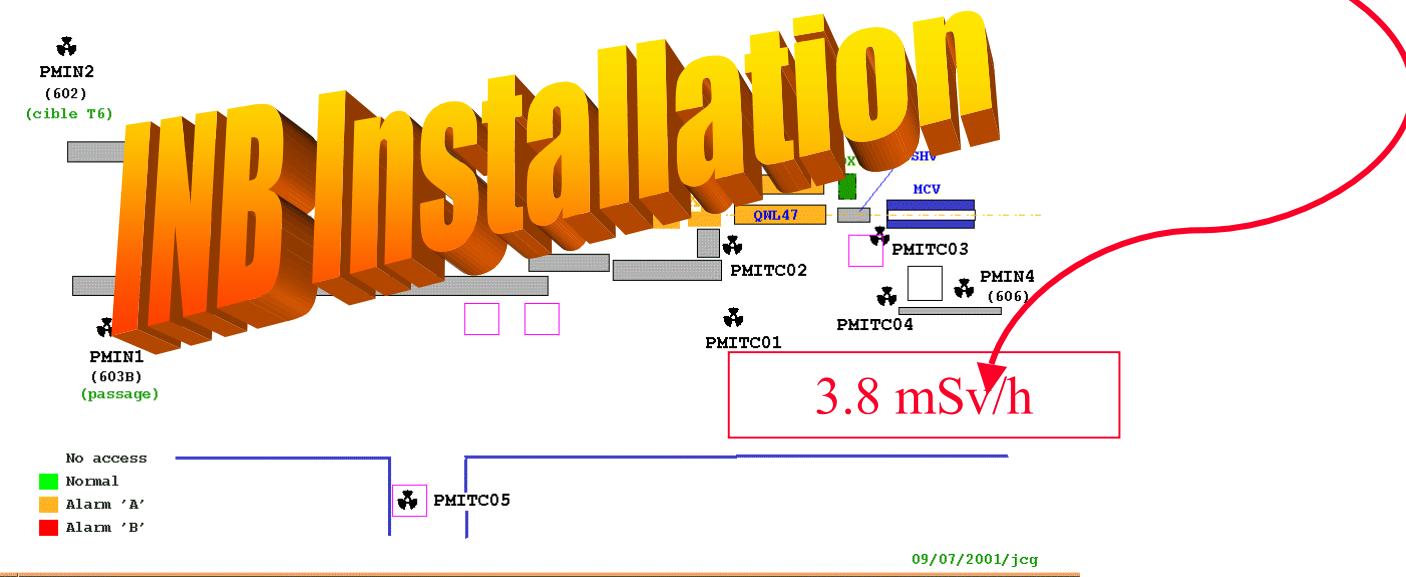

TCC2

ZONE TESTS EN TCC2

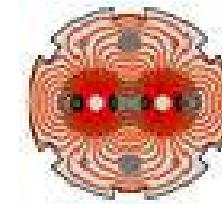

Access: some 100 microSv/h to some few mSv/h

Limited Stay Area, High Radiation Area

TCC2

Any person working TCC2 has to carry a **personal dosimeter** and an **operational dosimeter**

All work must be **authorized by the Divisional Radiation Safety Officer**

> 100 microSv/h: All work must be planned

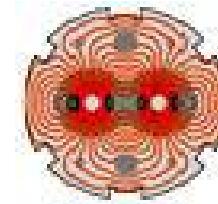

> 2 mSv/h: close supervision by RP group
contract workers have to be on CDI

(J.O. Nr. 118 du 23 Mai 1998)

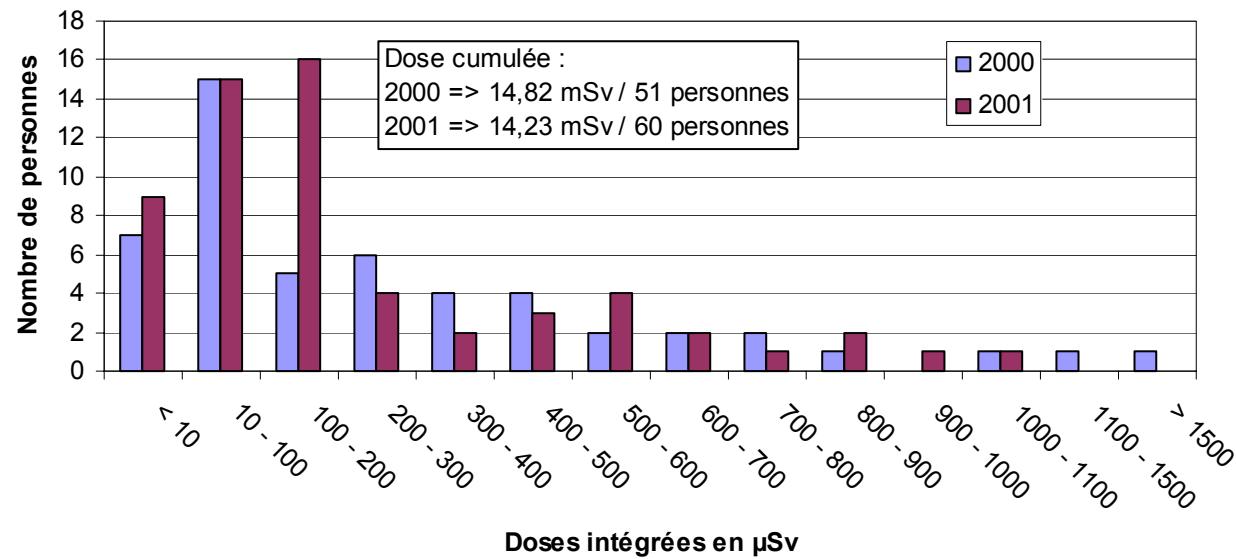

Tracing of all material leaving TCC2

Personnel doses

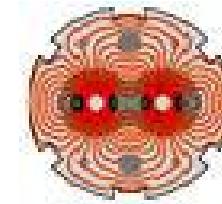

Répartition des doses pour les personnes intervenant sur la zone des tests "RADWG"

ALARA

Justification

Optimization

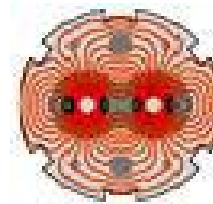

TCC2: there is still room for improvement
(optimization)

Ordonnance Suisse, Art. 6:

Le principe de l'**optimisation** est considéré comme respecté dans le cas des activités ne délivrant jamais une dose effective supérieure à 100 **microSv par années** aux personnes exposées aux rayonnements dans l'exercice de leur profession.....
