gLite 3.0 services to be obsoleted

Tuesday 7 October 2008 11:00 (20 minutes)

Process to obsolete middleware services

Services in the queue:

 glite-SE_{classic} < li > glite – VOBOX < li > glite – WMS < li > glite – PX < li > glite – MON < /ul >

An announcement for this retirement is already on the gLite 3.0 page :

<http://glite.web.cern.ch/glite/packages/R3.0/>

In addition, ALICE reported VOMS proxy problems when using LCG-RBs and certain LCG- CEs. When using the CEs via an WMS, no problems are observed.

There seem to be still more RBs than WMSs out there.

Could you please encourage the sites to be a bit more aggressive with the move to the WMS. It is easier to operate, more stable, just plain and simple.

Presenter: THACKRAY, Nicholas (CERN)
