

Measuring the neutrino mass from large scale structure

Monday, 8 December 2008 14:25 (25 minutes)

Future large scale structure surveys provide one of the most promising techniques for probing the neutrino mass. I will present results from detailed N-body simulations of structure formation in models with neutrino mass. Such simulations are necessary for the next generation of surveys such as the LSST

Presenter: Prof. HANNESTAD, Steen (University of Aarhus)

Session Classification: Theory and Cosmology
