Dear colleagues

the draft minutes of the latest Management Board meeting
are available at:

<https://cern.ch/twiki/bin/view/LCG/MbMeetingsMinutes>

...

Alberto,

in point 5) it is stated:

Sites have requested a mechanism to annotate/explain the result of the SFT tests and be able to comment, in particular, the situations of "service unavailability" on their site. This feature request will be taken into account, noting that this feature is also already available in other reporting tools.

May I suggest to modify this as follows:

Sites have requested a mechanism to annotate/explain the result of the SFT tests and be able to comment, in particular, the situations of "service unavailability" on their site is caused by a failure in the test itself or in the off-site services the test mechanism depends on. This feature request will be taken into account, noting that this feature is also already available in other reporting tools.

Regards,
