

- **RB for SAM Admin:**
 - only one (CNAF) not acceptable
 - what about to have another one at CERN? Other volunteers?
 - current HW: 2xXeon-3.20GHz, 4GB mem, 76GB Raid1-HW (oversized for current 1600 test jobs per month)
 - reasonable requirement: 2 Ghz, 2GB ram, 2x40GB HD Raid-1 SW
- **SAM replication:**
 - current main instance:
 - 2 nodes in load balance, 4GB ram, 2 HD (mirror) of 256 GB each
 - DB size 72 GB (~9 months history)
 - Oracle on separate machine/cluster
 - Oracle 10g Express Edition (free) limitations: 1 CPU, 4GB DB
 - Commercial release maybe needed
 - ...or more work on historical data purge?
 - Oracle expertise and DB maintenance is needed
 - man-power for at least 2/3 months needed (not full time, of course)
