Empowering VO's

Where computer science meets the application communities!

VO-specific developments:

- Portals
- Virtual Research Environments
- Semantics, ontologies
- Workflow
- Registries of VO services

Production grids provide these services.

Enhancing useability

- NGS has deployed low-level tools: these are reliable and give a production service
- Consequently an application developer interacts at a low level with grid services
- Role of application developer: build higher abstractions & tools
 - Specific to a community (MyGrid was developed for bioinformatics)
 - Generic

Example: P-GRADE and GEMLCA, developed at SZTAKI, Hungary and University of Westminster are made available to NGS users

- www.cpc.wmin.ac.uk/gemlca
- www.lpds.sztaki.hu/pgportal
- www.cpc.wmin.ac.uk/ngsportal

P-GRADE Portal and GEMMLCA

The P-GRADE solution

NGS National Grid Service
core production computational and data grid

P-GRADE
portal

Portal server at
UoW

Ultra-short range weather forecast

(Hungarian Meteorology Service)

Forecasting dangerous weather situations (storms, fog, etc.), crucial task in the protection of life and property

Processed information:
 surface level measurements, high-altitude measurements, radar, satellite, lightning, results of previous computed models

Requirements:

- Execution time < 10 min
- High resolution (1km)

What is a P-GRADE Portal

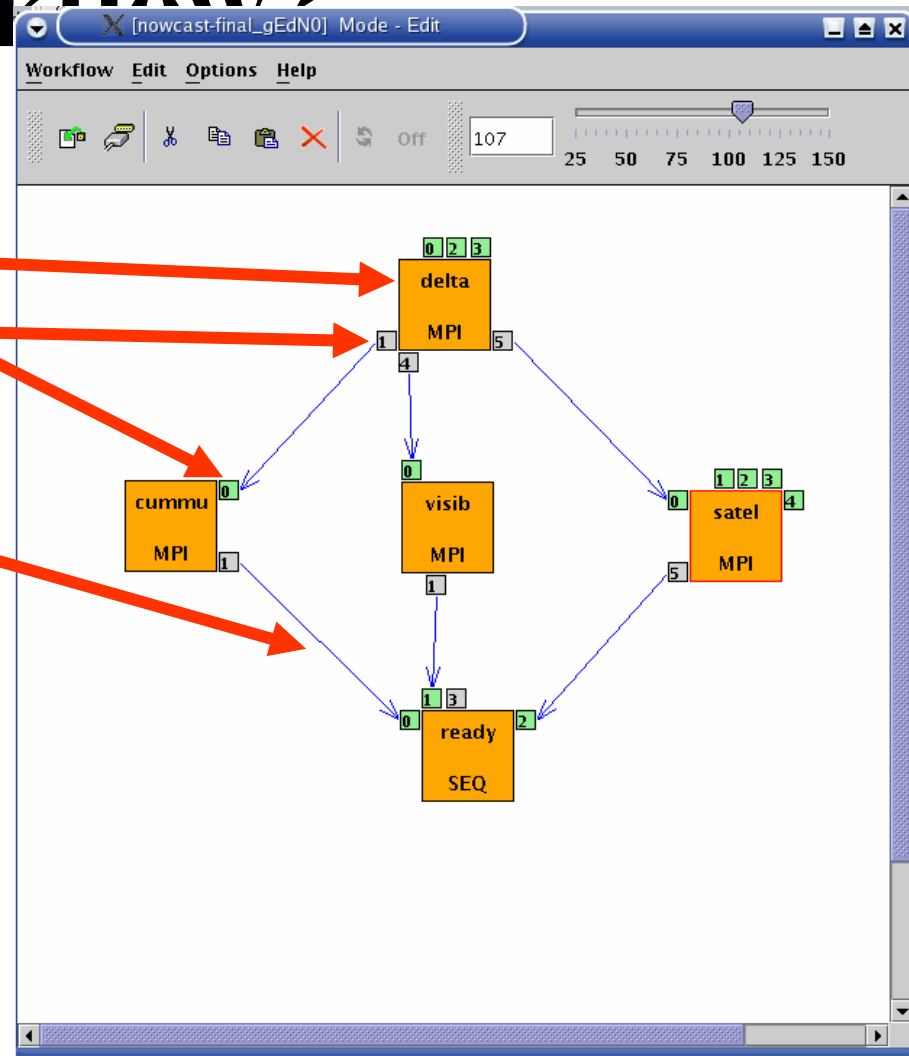

workflow?

- a directed acyclic graph (DAG) where

- Nodes represent jobs (executable batch programs)
- Ports represent input/output files the jobs expect/produce
- Arcs represent file transfer between the jobs

- semantics of the workflow:

- A job can be executed if all of its input files are available
 - **local input files:** on the portal server
 - **remote input files:** at Grid storage service providers

Multi-Grid P-GRADE Portal

Different jobs of a workflow can be executed in different grids

EGEE Grid
e.g. VOCE

P-GRADE-Portal

The portal can be connected to multiple grids

UK NGS

London

Rome

Athens

P-GRADE portal in a nutshell

Workflow	Job	Hostname	Status	[Logs]	[Output]	[Action]
nowcast-final_gEdn0_b	summu	m0.hpcc.sztaki.hu	3. Finished		Out	-
	delta	m0.hpcc.sztaki.hu	3. Finished		Out	Err
	ready	m0.hpcc.sztaki.hu	3. Finished		Err	-
	satal	m0.hpcc.sztaki.hu	3. Finished		-	-
	visib	m0.hpcc.sztaki.hu	3. Finished		Out	-

Tracefile visualization
workflow: nowcast-final_gEdn0_b

Trace View Info
Width: 600
Height: 350
OK

Proxy management

Grid resources management

Workflow creation

Job mapping to Grid resources

Workflow management and execution visualization

GEMMLCA objectives

- To deploy legacy code applications as Grid services **without reengineering the original code** and minimal user effort

GEMMLCA

- To create Grid workflows where components can also be legacy code applications

GEMMLCA &

- To make these functions available from a Grid Portal

P-GRADE
Portal
Integration
