

2006-10-06: The DPM server was unreachable for some time because it lost connection to the MySQL server. The service was restored by restarting all DPM-related services. This has caused failures in the SFTs, but those failures did not show up above.

2006-10-06: The DPM server and its disk pool nodes turned out to be wrongly configured. This resulted in mapping errors for users for whom no previous mapping existed in the gridmapdir. Such users could not access the DPM service. The problem has been resolved by adjusting the Globus configuration.
