

2006-10-06

CE unresponsive, with very high load and constantly swapping. Ultimately, we had to power cycle it. Considering our options regarding increasing hardware specs or moving onto better hardware.

CE was moved onto new hardware on Friday 6 October 2006 at 15:30 BST

Check for dCache gridftp doors not listening on port 2811 but with java process running implemented, also ulimit for open file descriptors was increased on dcache gridftp doors. We are still seeing problems with heavy loads on our tape pools.

Same problem with CE as seen on previous day.
