Creating and running applications on the NGS

Guy Warner

Policy for re-use

- This presentation can be re-used for academic purposes.

- However if you do so then please let training-support@nesc.ac.uk know. We need to gather statistics of re-use: no. of events, number of people trained. Thank you!!

Acknowledgements

- This presentation re-uses material
  - on globus commands from Stephen Pickering (University of Leeds)
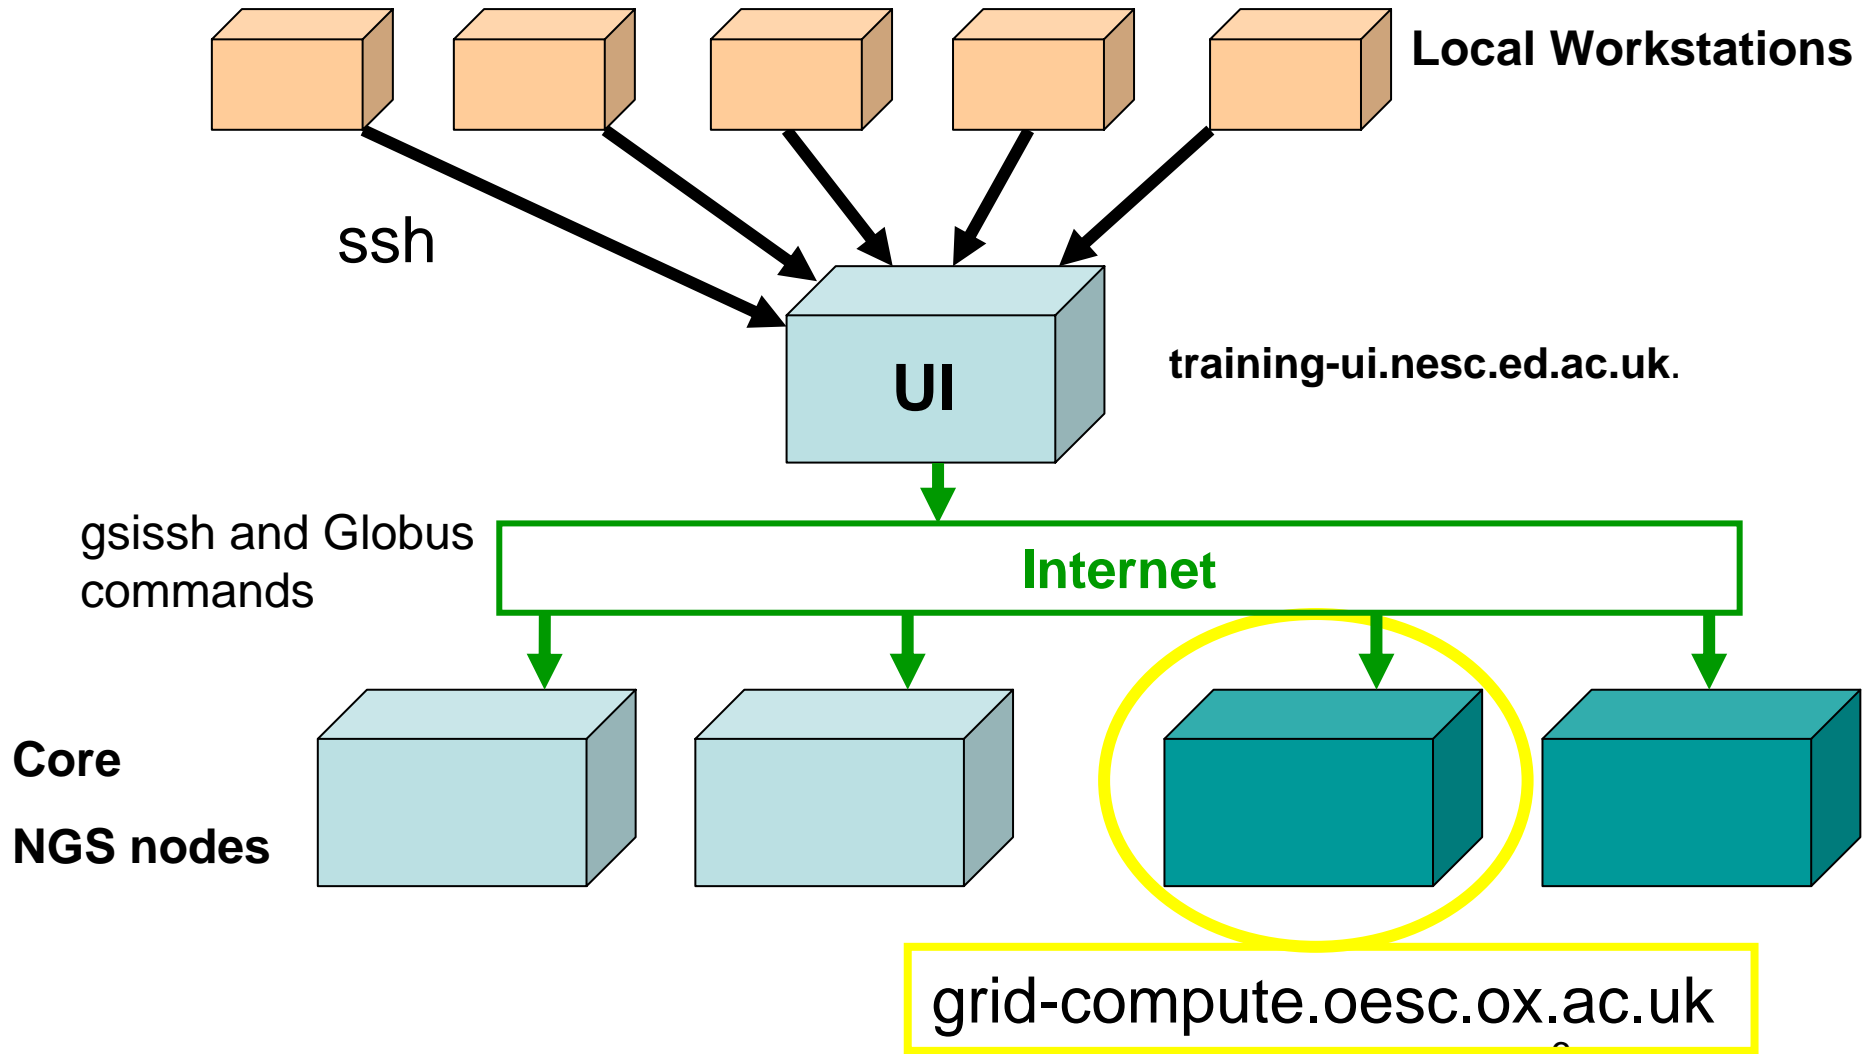

Outline

- A "User interface" machine and our set-up today

- How to:

  – Port code and data from desktop/UI to the NGS compute nodes

  – Compile and run code

  – Invoke your application from the UI machine

- Practical

The "UI" machine

- The users interface to the grid
  - Where you upload your certificate for your session
  - Where you create proxy certificates
  - Where you can run the various commands, including…
    - The clients and development tools from Globus Toolkit 4.0.3 pre-ws
    - GSI enabled Secure Shell
    - Storage Resource Broker (more on this tomorrow)
    - OGSA-DAI (more on this tomorrow)

Our setup

Local Workstations

ssh

UI training-ui.nesc.ed.ac.uk.

gsissh and Globus commands

Internet

Core

NGS nodes
grid-compute.oesc.ox.ac.uk

GSI enabled Secure Shell and Secure CoPy

- Openssh patched to additionally use proxy certificate for authentication and authorization

- Often run on port 2222

Secure file copy

UI

Code and data

gsiscp: copies file using proxy certificate to allow AA

NGS node

Open shell on NGS CN
![NGS National Grid Service logo]

UI

Code and data

gsissh

Can be an X-windows client

NGS node

Code and data

Compile, edit, recompile, build

SHORT interactive runs are ok (sequential)

Totalview debugger.

Run jobs from the UI

UI

Code and data

globus_job_run

Or

globus_job_submit /
globus_get_output

Can pass files with
these commands: e,g,
parameters for a job.

NGS head node

Code and data

Executables

Job Submission Tutorial

Overview

- This tutorial will look at
  - Job submission, monitoring and retrieving output
  - Error diagnosis.
  - Compiling code suitable for running on the NGS
  - Using NGS modules

- Please remember the systems you are using are part of a production level service.

Questions -1

- "How do I know which compute node to use?"
  - Use the Information Service (Not covered in this event)
  - The core nodes of the NGS all run the same software
- Is my NGS Compute Node account shared across all machines??
  - NO – You must synchronise your accounts on different machines yourself. Your account names may be different on each machine. Use GridFTP (from portal) or gsi-scp
  - You can hold files in the SRB,(Storage Resource Broker –see tomorrow) and read/write these from any compute node

Questions -2

- "Should I stage an executable?" (stage = Send it to a compute node from my desktop/UI)
  - Only if the UI is binary-compatible with the execution node
    - Not all nodes are running Linux.
    - Not all head nodes are running the same operating system as their execution nodes
  - Safer to
    - Check it compiles locally
    - Copy to a head node
    - Compile it there (or submit job to compile it)
