

**38th INTERNATIONAL CONFERENCE
ON HIGH ENERGY PHYSICS**

AUGUST 3 - 10, 2016
CHICAGO

Contribution ID: 238

Type: **Oral Presentation**

**Studies of the CKM matrix with semileptonic
b-hadron decays at LHCb ($10' + 5'$)**

Friday 5 August 2016 12:05 (15 minutes)

Exclusive semileptonic b-hadron decays are under good theoretical control, which allows precise determinations of the CKM matrix elements, $|V_{ub}|$ and $|V_{cb}|$. The large production of Λ_b baryons and B_s mesons at the LHC allows LHCb to provide complementary information in this sector with respect to the B-factories. The latest measurements of these decays at LHCb will be presented, using the full Run 1 dataset.

Presenter: STEFKOVA, Slavomira (London-Imperial)

Session Classification: Quark and Lepton Flavor Physics

Track Classification: Quark and Lepton Flavor Physics
