Technology transfer: Another contribution from High Energy Physics (20' + 5')

Saturday, 6 August 2016 10:20 (25 minutes)

Advanced technologies developed for novel accelerator and detector in HEP projects are valuable treasure of society. Sometimes those technologies have unique and complimentary merit which can never been developed in an industrial section alone and therefore their transfer would benefit society substantially.

In this presentation, status of collaboration with companies in machine and detector development are reported to promote discussion on future directions toward more fruitful and effective transfer in the both sectors.
