Art and Science convergence at Kavli IPMU (12' + 3')

Friday, 5 August 2016 12:30 (15 minutes)

The Kavli Institute for the Physics and Mathematics of the Universe (Kavli IPMU) runs an Artist in Residence Program, giving artists the opportunity to interact and work with astronomers, physicists and mathematicians at the institute. Based on models in the US/Europe, the Kavli IPMU has been designed not only to give artists to be welcomed to the science community, it also gives researchers the opportunity to learn the artist's skills and views. A pilot program was run in 2015 to great success, with a contemporary artist hosting three programs including a workshop for researchers, and two art exhibitions for the general public.

Presenter: TSUBOI, Aya (The University of Tokyo Institutes for Advanced Study,)

Session Classification: Education and Outreach
