Measurement of top quark properties in single top production ($15' + 5'$)

Thursday, 4 August 2016 12:50 (20 minutes)

Single top topologies are exploited for studies of top quark properties. This includes the first measurement of single top polarization in the t-channel production mode in pp collisions, which directly confirms the V-A nature of the tWb production vertex. W-helicity fractions are measured in the phase space sampled by a selection optimized for t-channel single top production, orthogonal to the $t\bar{t}$ final states used in traditional measurements of these properties. Anomalous couplings of the top quark are also searched in t-channel single top production with a NN-based analysis.

Presenter: JAFARI, Abideh (Universite Catholique de Louvain (UCL) (BE))

Session Classification: Top Quark and Electroweak Physics

Track Classification: Top Quark and Electroweak Physics
