What makes a good physics news story?

On behalf of the InterAction Collaboration

Terry O’Connor – STFC, UK
Rachel Feltman – Washington Post, US
Pallab Ghosh – BBC, UK
Saeko Okada – KEK, Japan
Our session

- Brief introduction to the media landscape
  - Some changes that affect us all
- The reporters’ view – print, TV, radio, online
  - What they are looking for in a good physics story
  - What they need from you
- The PIOs’ view
  - How they can help
  - Global cultural differences
- Questions and discussion
News sources

Mainstream daily:
• Newspapers
• Evening TV News
• Radio etc

Weekly:
• Sunday editions
• News magazines
• Weekly TV and radio feature/discussion programs etc

Longer form:
• Feature length documentaries
• Films, books, etc

Instant:
• Online news
• Radio breaking news
• TV live coverage
• Facebook, Reddit, Snapchat, Messenger etc
Key annual audience trends 2015 vs. 2014

- Newspapers: \(\downarrow 7\%\) daily circulation
- Cable TV: \(\uparrow 8\%\) combined average viewership for prime-time news
- Network TV: \(\uparrow 1\%\) evening news viewership, \(\downarrow 2\%\) morning news viewership
- Local TV: \(\downarrow 5\%\) late night news viewership, \(\downarrow 2\%\) morning and early evening viewership
News sources are changing - rapidly

- Majority now use social media for news
  - 10% say now their main source
- Rapid move to mobile news consumption shows no signs of slowing
  - Some countries now smartphone first
- Traditional brands struggle to remain noticed
  - But they remain important to news users

The rise and rise of online news......

In Greece, online (27%) is now MAIN source of news – bigger than TV and print combined.

Q5B. Which, if any, of the following have you used to access news in the last week?
Base: Total sample
*Digital born brands like Buzzfeed and Huffington Post that produce their own content

Traditional brands matter
### Online news: selected countries

Making good science into a good story
Physics is inherently interesting

- Physics findings tell us the biggest (and smallest) stories in the Universe
- Physics is, after all, the “knowledge of nature”
Physics is inherently intimidating

• For whatever reason, people are more at home with the life sciences

• There may not be a higher barrier to entry in terms of comprehension, but that doesn’t matter
Help reporters help you

• Ask yourself: Who cares, and why?
• Know your narrative
• Be clear, but not condescending
Questions to answer (before we ask)

- Why does this finding excite you?
- Why will it excite others in your field?
- Why should it excite the rest of us?
Sometimes it’s okay to embrace complexity…

Schrödinger’s cat just got even weirder (and even more confusing)
...or absurdity

The biggest scientific instrument in the world was brought down by a tiny weasel

Working with the media
The role of the Public Information Officer

Saeko Okada
Head of PR office, KEK
Media communications

- What reporters need from you
- How PIOs can help
- Global cultural differences
THE VERY FIRST STEP
What is “media relations”?

• Building trusting relationships with reporters
  ▪ Fostering mutual understanding, sometimes acting as source of informal advice
• Proactively informing the media of news
  ▪ Eg issuing press releases
• Disseminating the news
  ▪ Interviews by email or phone, face to face, or in front of the camera
WHAT DO THE MEDIA NEED FROM YOU?
Scientists start with the detail....
The media want the entire picture
Scientists like to discuss all details...
Media ask “what’s the point?”
You are not alone!

HOW PIOs CAN HELP
PIOs will help...

- Build relationships with the media
  - Provide background and identify the key points
- Supplement what you did not say
- Help explain the result without using equations, by metaphor and so on
  - Translate the jargons
- ... in order to open the door and welcome the media to your science!
GLOBAL CULTURAL DIFFERENCES

Nobel prize in physiology or medicine 2012: as it happened ...
Oct 7, 2012 ... Sir John Gurdon has issued a statement on his Nobel prize win: ... Sir John Burn, professor of clinical genetics at Newcastle University said the ...

Did teachers write you as bad a school report as this Nobel ...
Oct 8, 2012 ... British developmental biologist Sir John Gurdon was told in school report that his ambition to become a scientist was ridiculous. Photograph: ...
Different cultures, different reportage

- Japanese treat Nobel Laureate as almost royal
  - Even the details of private matters
- British media reports private matters a little
- North American media does not report private matters

Media reflects the culture in which they operate

*Background in Japan:
A newspaper home delivery system
= media has to target everybody
Please keep in mind...

Don’t worry
PIOs are with you!
Questions for the panel
Checklist:

1. Is your “news” really interesting to non-physicists?
   • Would your mother be excited by this - if she’s not a physicist!

2. Have you considered the timing of the announcement?
   • Good stories need preparation time to become great stories

3. Have you talked with your lab/uni PIO/comms team?
   • Some news is better suited to TV than print, some are best pushed through social media. They can advise.

4. Is there a personal or technology angle as well?
   • A “hook” to attract the reporter’s attention to the physics

5. Are there pictures, videos or graphics (not charts)?
   • Pictures really do say a 1000 words

6. Remember the media are not homogeneous – and they’re not (necessarily) out to trip you up
