2016 WLCG Workshop
01-03 February 2016 - Lisbon ,Portugal

DPHEP Workshop
03/04 February 2016

Contribution ID: **21**

Type: **not specified**

Software topics

Wednesday 3 February 2016 09:00 (1 hour)

 What is actually useful to do in common? Tools or support for common automated and intelligent build/test/validation services? More ? Common libraries etc? Role of HSF What is usefully shareable? Detailed software performance analysis and tools for analysis All this should be in the context of the HSF. Some activities towards common (lower-level) build tools was started already. Organise a dedicated HSF workshop on this?- Do experiments actually want to commit to the HSF for common software interests? Given today's (and expected evolution of) processor and machine architecture, is today's data architecture (i.e. ROOT) appropriate - do we need to re-think completely?

Presenter: HEGNER, Benedikt (CERN)
