Experiment workflows & data management tools and infrastructure

Tuesday 2 February 2016 14:00 (1 hour)

 Can we think about common toolsets for all experiments, given 10 years until HL-LHC? Input on data management convergence from previous day What is realistic in terms of common infrastructure and services in order to achieve commonality? More commonality is an expectation of funding agencies. Political limitations? e.g. specific project funding? Many sites (esp Tier 1s) have to support other sciences on the same infrastructure

Presenter: BONACORSI, Daniele (University of Bologna)
