

Barbara Latacz (Poland) is now a student at master studies at University of Warsaw, Faculty of Physics. She specialises in experimental particle physics. In 2014 she received Bachelor Degree in physics after completing an elite, individualised program at University of Warsaw.

At CERN she works in COMPASS experiment, physics department. Her task is to modernise TERAD computer program which calculates QED radiative corrections. Additionally she works in Copernicus Science Centre in Warsaw. After internship at CERN she wants to build something useful.
