

Mathieu EHRHART

Mathieu was born and raised in France, but moved to the USA after high school for his bachelor's degree. He had the opportunity to work on various projects for the Thomas Jefferson National Accelerator Facility and is currently a Master's student in Physics at Old Dominion University located in Virginia, USA.

During his work at CERN, he joined the COMPASS experiment (PH-UFT), where he worked on improving the tracking of the Large Angle Spectrometer for polarized Drell-Yan measurements.

He is hoping to get a PhD in high energy experiment physics and to do instrumentation.
