Experimental precision must be matched with theory precision!

**EWPO** can give valuable information about SM, BSM
→ only SM, MSSM “ready”, more needed

Most relevant: $M_W$, $\sin^2 \theta_{\text{eff}}$, $m_t$, $\Delta \alpha_{\text{had}}$, …

Extraction from experiment?

Current theory uncertainties of $M_W$, $\sin^2 \theta_{\text{eff}}$ not sufficient
Future theory uncertainties: not sufficient!

Top quark mass: mainly theory driven. Improvement at FCC-ee?

$\Delta \alpha_{\text{had}}$: could be the limiting factor, Improvement at FCC-ee?

Higgs couplings: XS and BR have to be under control
parametric uncertainties ($m_b$) have (to me) unclear perspective
Experimental precision must be matched with theory precision!

**EWPO** can give valuable information about SM, BSM

→ only SM, MSSM “ready”, more needed ⇒ TH input/effort needed!

Most relevant: $M_W$, $\sin^2 \theta_{\text{eff}}$, $m_t$, $\Delta \alpha_{\text{had}}$, ... 

Extraction from experiment? ⇒ TH input/effort needed!
