Working Together on the Web

Monday, 3 July 2006 09:00 (1h 5m)

Python's web ecosystem is richer than ever. For every part of the web application stack, there are more choices than ever, and there are more full-stack web frameworks than ever. Every application has different requirements, which makes choice useful. In my talk, I will discuss how the Python web landscape has been changing and how it's possible to have choices and still avoid reinventing wheels and dividing up our efforts.
