Index & Search: itools.catalog

Monday 3 July 2006 11:35 (30 minutes)

There are not many solutions for indexing and searching in Python. Among them itools.catalog is the only one 100% Python and actively maintained.

This talk will explain the usage of itools.catalog.

We will also define its functional scope, this is to say, what it can do and what it cannot do. And we will put it in context with other solutions available to Python.
