eXtremeManagement of projects with Plone

Monday 3 July 2006 14:00 (30 minutes)

eXtremeManagement is a Plone product that helps in developing using the Extreme Programming methodology. It helps steer a project to success by a focus on planning, on estimating and on keeping a log of your hours worked. My colleagues and clients at Zest Software like it.

Goals of the talk:

- Get a feel for the planning and estimating parts of XP.
- Demonstrate the eXtremeManagement product and show how it helps with this.
- Get improvement ideas for eXtremeManagement and probably for your own project management software.
