Introducing python into industrial environment applications

Tuesday 4 July 2006 12:10 (30 minutes)

Two years have passed since the company I work for (SIA) decided to use Python to develop applications.

Most of those applications are for pharmaceutical companies with high industrial and production needs. So, I would like to talk about why we have chosen python, about the main problems using Python with industrial SCADA frameworks and also about some results and tips.

To wrap it up, I would like to comment on what we think the Python evolution within our company will be.
