An Introduction to PyPy

Tuesday 4 July 2006 11:00 (30 minutes)

PyPy is an implementation of Python written in Python itself. It aims are performance and flexibility.

This talk will introduce the project and attempt to explain why it is interesting and useful.

The intended audience is people who have heard of PyPy, have a vague idea that it is interesting but are not really sure why, though if you've never heard of PyPy I'll be delighted to explain things to you too :)
