RMVA (R TMVA)

RMVA is a set of plugins for TMVA package based on ROOTR that consist in a set of classes that engage TMVA in a little intrusive way and allows new methods of classification and regression calling R's packages.

R packages for plugins

- **Boosted decision tree** (Package C50)

Description: Fit classification tree models or rule-based models using Quinlan's C5.0 algorithm.

Website: <http://cran.r-project.org/web/packages/C50/index.html>

- **Neural networks**(Package RSNNS)

Description: The Stuttgart Neural Network Simulator (SNNS) is a library containing many standard implementations of neural networks..

Website: <http://cran.r-project.org/web/packages/RSNNS/index.html>

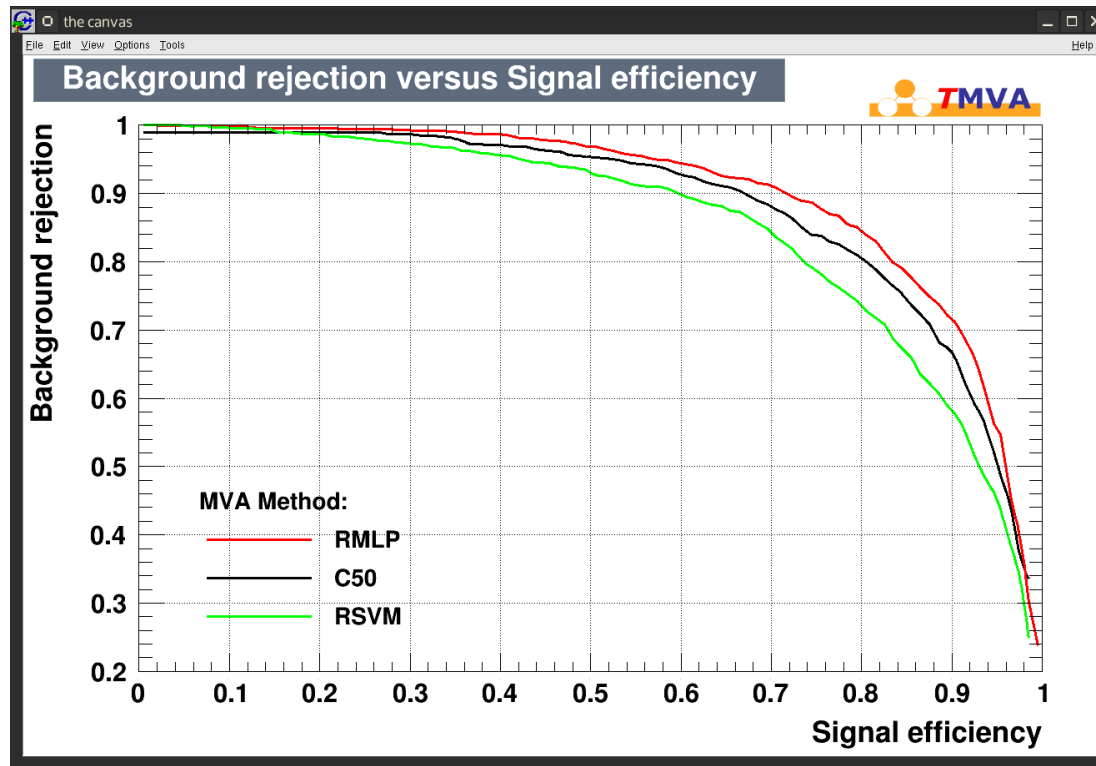

- **Support vector machine** (Package e1071)

Description: svm is used to train a support vector machine. It can be used to carry out general regression and classification (of nu and epsilon-type), as well as density-estimation.

Website: <http://cran.r-project.org/web/packages/e1071/index.html>

Results

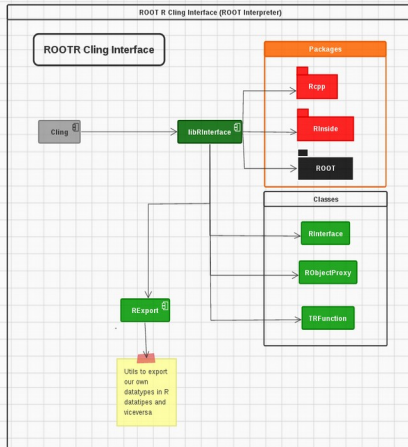

Evaluation results ranked by best signal efficiency and purity (area)

MVA Method:	Signal efficiency at bkg eff.(error):				Sepa- ration:	Signifi- cance:
	@B=0.01	@B=0.10	@B=0.30	ROC-integ.		
RMLP	: 0.354(08)	0.718(08)	0.908(05)	0.902	0.505	1.347
C50	: 0.000(00)	0.671(08)	0.878(05)	0.881	0.462	1.253
RSVM	: 0.154(06)	0.597(08)	0.829(06)	0.853	0.377	1.049

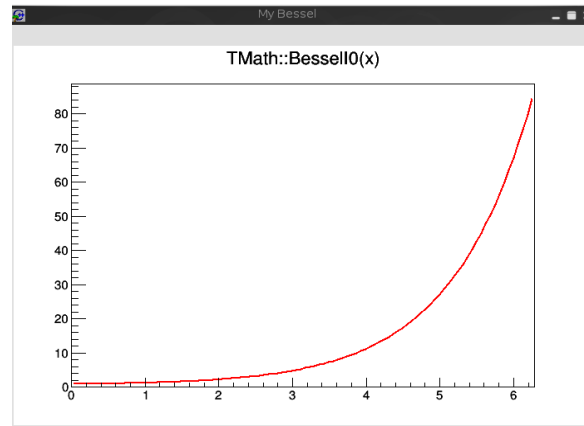

More Information

```
require(ROOT)

c1 <- TCanvas('c1', 'My Bessel')
bessel<- TF1('bessel', 'TMath::BesselI0(x)')
bessel$SetRange(0,2*pi)
bessel$Draw('') #plotting with ROOT's graphics system
c1$update()
```
