

Enabling Grids for E-sciencE

Laboratory: Hands on using EGEE Grid (gLite)

Athanasia Asiki
aassiki@cslab.ece.ntua.gr
Computing Systems Laboratory,
National Technical University of Athens

www.eu-egee.org

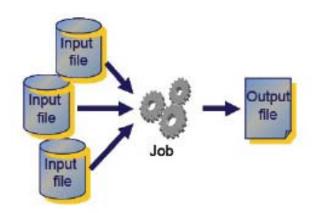

Let's enter the Grid...

Application's structure

- The execution of a typical Grid application follows this scenario:
 - The user submits its application's job to the "Grid"
 - The job is being executed
 - The job's execution may include the processing of one or more Input Files stored in a Storage node
 - The job may produce one or more Output Files
 - The Output Files can be stored somewhere in the Grid system (perhaps in the Storage Element or in the User Interface)
 - The User can access the **Output Files** using the corresponding Grid mechanisms

nio Delgado Peris, Flavia Donno, Patricia Méndez Lorenzo, Roberto Santinelli, Andrea

Sciabà

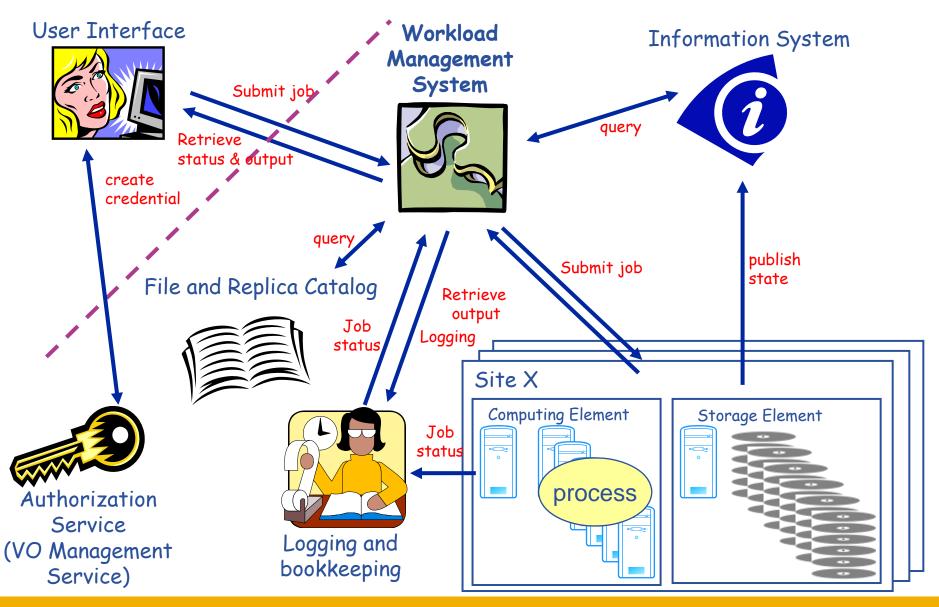

File: gLite-3-UserGuide

Abstract. This guide is an introduction to the WLCG/EGEE Grid and to the gLite 3 middleware from a user's point of view.

http://glite.web.cern.ch/glite/documentation/

Scope

User Interface (1)

- Allows users to access Grid functionalities
- A machine where users have a personal account and where the user certificate is installed
- Gateway to Grid Services

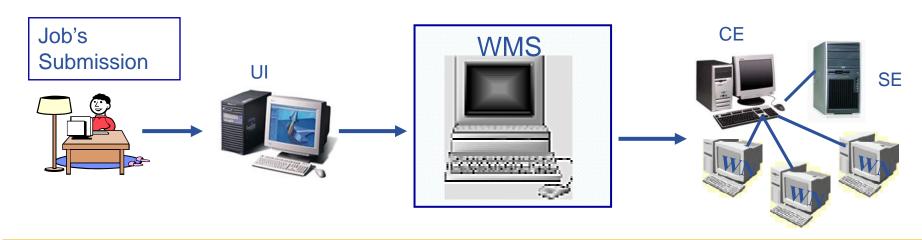

User Interface (2)

- It provides a Command Line Interface to perform some basic Grid operations such as:
- \$\times\$ List all the resources suitable to execute a given job
- Submit jobs for execution
- **Show the status of submitted jobs**
- Cancel one or more jobs
- Retrieve the logging and bookkeeping information of jobs
- Retrieve the output of finished jobs
- Copy, replicate and delete files from Grid

Workload Management System

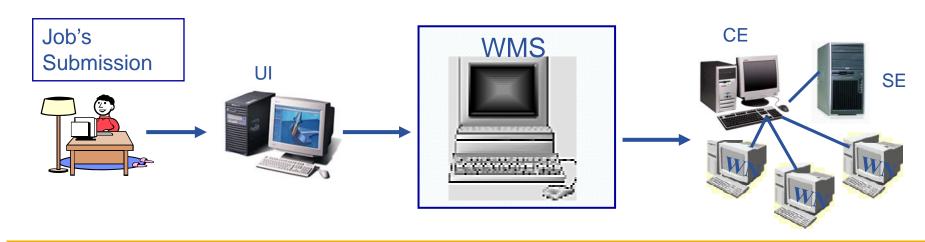

- The WMS is responsible for the acceptance of submitted jobs and for sending those jobs to the appropriate Computing Element
- The WMS retrieves information from Information Catalogues so as to find the proper available resources depending on the job requirements

Workload Management System

- Without the WMS, need direct interaction with nodes
 - Need to know resource addresses, capabilities
- Usually want a higher level abstraction submit a job to a Grid not to a CE

Computing Element

- "Grid interface"
- It is built on a farm of a computing nodes called Worker Nodes (WNs)
- **Executes the basic queues functions**
- In the Computing Element, a process is being executed that accepts jobs and dispatch them for execution to the Worker nodes (WNs)
- The state of an executing job is being watched by the Computing **Element**

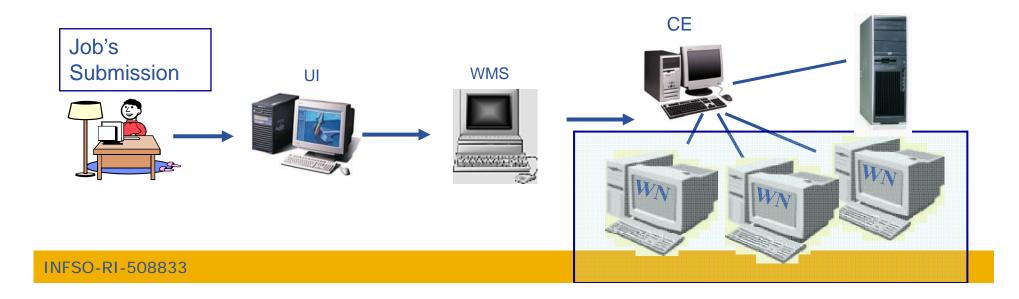

Worker Node

- The submitted jobs are being executed in the Worker nodes
- Need only outbound connectivity
- Only basic services of middleware are required to be provided by the Worker nodes such as

Application libraries

Application Programming Interfaces (API)

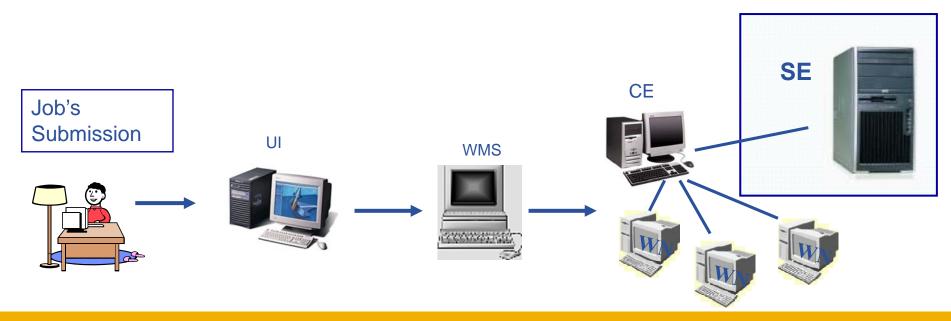

Commands for performing actions on Grid resources and Grid data

Storage Element

- It provides uniform access to storage resources
 (it may control simple disk servers, large disk arrays or Mass Storage Systems (MSS)
- Each site may provide one or more SEs

Getting started

- Obtaining a certificate
- Choosing a VO
- Accounts for the training events:
 - ssh ui01.isabella.grnet.gr (Putty)
 - login as:

Installing the certificate

- ✓ [egee01@ui01 egee01]\$ mkdir .globus
 - Create directory .globus under the user home directory

```
    ✓ [eg
    • Prepare certificates for the training event only:
    • [egee01@ui01 egee01]$ ./preparecerts.sh
    ✓ [ege
    • [egee01@ui01 egee01]$ Is -I ~/.globus
    total 12
    -r--r--- 1 egee01 training 5535 Sep 14 16:55 usercert.pem
    -r---- 1 egee01 training 963 Sep 14 16:55 userkey.pem
```

- ✓ [egee01@ui01 egee01]\$ chmod 400 ~/.globus/userkey.pem
 - The key must be readable only by the user

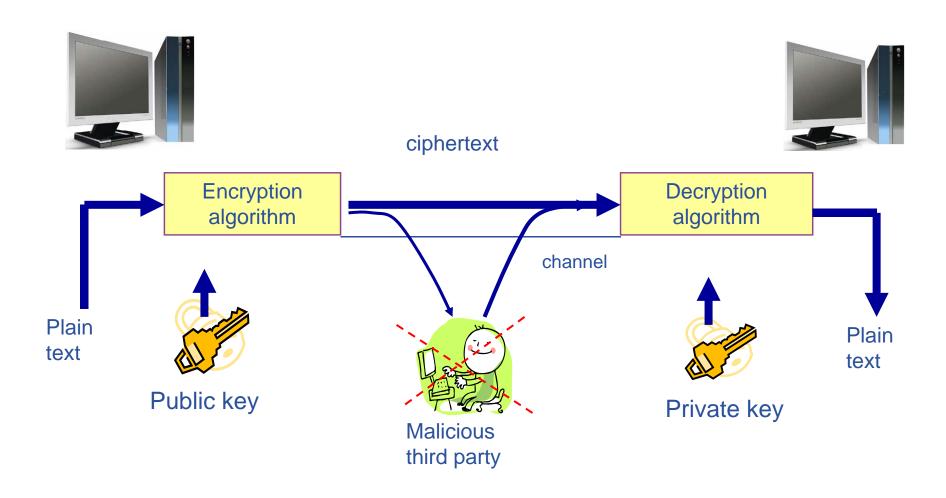

Certificate Info

- Retrieving information of the user certificate
- ✓ [egee01@ui01 egee01]\$ grid-cert-info

```
Certificate:
Data:
  Version: 3 (0x2)
  Serial Number: 1788 (0x6fc)
  Signature Algorithm: sha1WithRSAEncryption
  Issuer: C=GR, O=HellasGrid Demos, OU=Certification Authoritites, CN=HellasGrid
 Demo CA 2006
  Validity
    Not Before: Sep 14 11:25:01 2007 GMT
    Not After: Sep 29 11:25:01 2007 GMT
  Subject: C=GR, O=HellasGrid Demos, OU=People, L=Thessaloniki, CN=User 1788
  Subject Public Key Info:
    Public Key Algorithm: rsaEncryption
    RSA Public Key: (1024 bit)
      Modulus (1024 bit):
         00:c6:2e:31:bb:14:12:27:c3:a7:74:1a:48:3a:59:
```

Cryptography components

Digital certificate X.509

- Each entity (user, resource) must obtain a certificate
- The certificate includes information, such as the expiration date, the Certification Authority that signed it, the owner's public key and a DN
- The DN defines uniquely the owner and has the following fields:

C = Owner's country

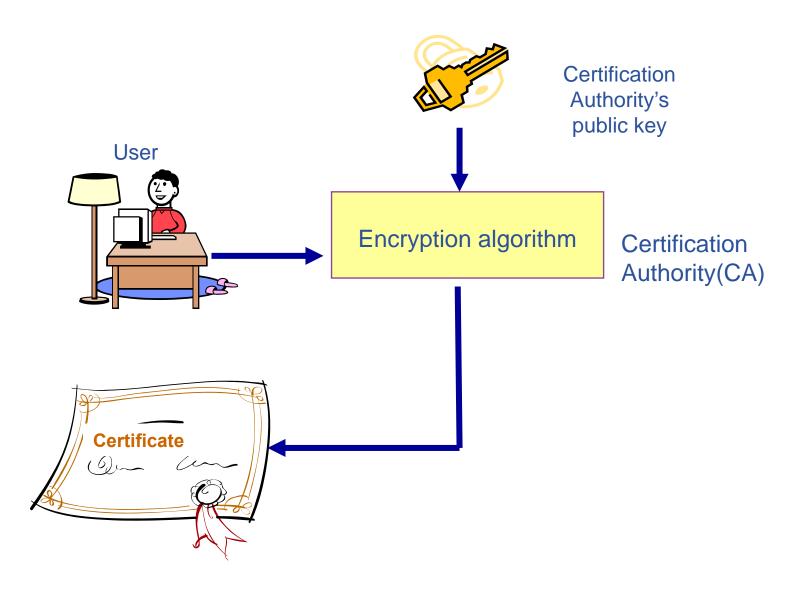

O = Owner's organization

OU = Owner's group

CN = Owner's name

Certificate authority

Proxy certificates

- A new temporal certificate created taking into account the issued certificate by the corresponding CA
 - ⇒ a new key pair is created to be used during the period that the proxy is valid
- The new private key is not secured by a password
- The use of a proxy is recommended because:
 - ✓ the proxy has a short lifetime
 - ✓ uses a different private key from the issued certificate

- Virtual Organisation Membership Service (VOMS)
 - A system which allows a proxy to have extensions containing information:
 - About the VO
 - The groups the user belongs to in the VO
 - Any roles the user is entitled to have
- Group: subset of the VO containing members who share some responsibilities or privileges in the project
 - Hierarchically organised
 - A user can be a member of any number of groups
 - VOMS proxy contains the list of all groups the user belongs to
- Role: Attribute which typically allows a user to acquire special privileges to perform specific tasks

Proxy certificate

Creating a proxy

✓ [egee01@ui01 egee01]\$ voms-proxy-init --voms=hgdemo

Your identity: /C=GR/O=HellasGrid Demos/OU=People/L=Thessaloniki/CN=User 1978

Enter GRID pass phrase:

Creating temporary proxy Done

Contacting voms.grid.auth.gr:15030

[/C=GR/O=HellasGrid/OU=auth.gr/CN=voms.grid.auth.gr] "hgdemo" Done

Creating proxy Done

Your proxy is valid until Mon Sep 17 00:48:09 2007

Destroying a proxy

✓ [egee01@ui01 egee01]\$ voms-proxy-destroy

Information System (IS)

- It provides information about the Grid resources and their status

 ⇒ This information is essential for the operation of the whole Grid
- Location of available Computing Elements to run jobs
- Finding of SEs that holding replicas of Grid files and the catalogs keeping the information on these files
- The information is stored in databases
- The published information is used for
 - ✓ monitoring purposes

⇒ for analyzing usage and performance of the Grid, detecting fault situations and any other interesting events

✓ accounting purposes

⇒ for creating statistics of the applications run by the users in the resources

- Globus Moinitoring and Discovery service
- Resource Discovery and publishing the resource status
- OpenLDAP which is an open source implementation of the *Lightweight Directory Access Protocol (LDAP)*, a specialised database optimised for reading, browsing and searching information
- Hierarchical architecture:
 - In every resource runs a Grid Resource Information Server (GRIS)
 providing relevant information about the resource
 - At each site runs a Site Grid Information Server (GIIS) that collects information from the local GRISes and republishes it. The GIIS uses a Berkeley Database Information Index (BDII) to store data
 - A BDII is used to read from a group of sites, depicting a view of the overall Grid resources (on top of the hierarchy)

A Command-line tool for querying MDS

Enabling Grids for E-sciencE

Icg-infosites
 ⇒ obtain VO-specific information on existing Grid resources
 lcg-infosites --vo <vo> <option> -v <verbosity> -f <site> --is <bdi> where:

--vo <vo>: the name of the VO to which the information to print is related (mandatory)

<option>: specifies what information has to be printed. It can take the following values:

ce: the number of CPUs, running jobs, waiting jobs and CE names (global, no VO-specific information)

se: the names of the SEs supporting the VO, the type of storage system and the used and available space;

-v 1: only the CE / SE names

-v 2: the cluster names, the amount of RAM, the operating system name and version and the processor model

all: the information given by ce and se

closeSE: the names of the CEs supporting the VO and their close SEs

tag: the software tags published by each CE supporting the VO

Ifc: the hostname of the LFC catalogues available to the VO

IfcLocal: the hostname of the local LFC catalogues available to the VO

rb: the hostname and port of the RBs available to the VO

dli: the Data Location Index servers available to the VO

dliLocal: the local Data Location Index servers available to the VO

sitenames: the names of all WLCG/EGEE sites;

Examples (1)

- Obtaining information about computing resources
 - ✓ [egee01@ui01 egee01]\$ lcg-infosites --vo hgdemo ce

HG-03-AUTH
HG-04-CTI-CEID
HG-05-FORTH
HG-06-EKT
[...]
```

Job Description Language

- A high-level language based on the Classified Advertisement (ClassAd) language
- JDL describes jobs and aggregates of jobs with arbitrary dependency relations
- JDL specifies the desired job characteristics and constraints, which are taken into account by the WMS to select the best resource to execute the job
- A JDL file consists of lines having the format:
 attribute = expression;
 - Expressions can span several lines, but only the last one must be terminated by a semicolon
 - Literals are enclosed in double quotes
 - " in strings must be escaped with a backslash ("\"Hallo")
 - The character " ' " cannot be used in the JDL
 - Comments of each line begin with # or //
 - Multi-line comments must be enclosed between "/*" and "*/"
 - No blank characters or tabs should follow the semicolon at the end of a line

Attributes (1)

Executable	 ✓ The value of this attribute is the executable filename or the command to be run by the job ✓ If the command is already present on the WN, it must be expressed as a absolute path
StdOutput	✓ The name of the files containing the standard output
StdError	✓ The name of the files containing the standard error
StdInput	✓ The names of the files used as Input files
InputSandbox	✓ The files to be transferred from the UI
OutputSandbox	✓ The files to be transferred back to the UI after the job is finished
Environment	✓ Modifies the shell environment of the job
Virtual Organisation	✓ Explicitly specify the VO of the user
Requirements	✓ Expresses constraints on the resources where the job should run
	✓ Its value is a Boolean expression that must evaluate to true for a job to run on that specific CE
	(example: Requirements = other.GlueCEInfoLRMSType == "PBS" && other.GlueCEInfoTotalCPUs > 1;)
SO-RI-508833	

Attributes (2)

RetryCount MaxRetryCount	✓ Times that the WMS automatically resubmitts jobs which failed for some reason (deep resubmission ⇒ when the job failed after started running in a WN)
ShallowRetryCount MaxShalowRetryCount	✓ Times that the WMS automatically resubmitts jobs which failed for some reason (shallow resubmission – gLite)
MyProxyServer	✓ The Proxy server to be used for certificate renewal
Rank	✓ The CE with the highest rank is selected by the WMS to execute a job ✓ by default Rank = other.GlueCEStateEstimatedResponseTime (but other.GlueCEStateFreeCPUs other.GlueCEStateWaitingJobs)

A simple job

✓ [egee01@ui01 egee01]\$ less testJob1.sh

```
#!/bin/bash
echo "****** Running... date ****** "
date
echo "****** Running... hostname ******"
hostname
echo "****** Running... pwd ****** "
pwd
echo "****** Running... Is ****** "
Is -I
echo "****** Running... uptime ****** "
uptime
echo "****** Learn your process ****** "
ps aux | grep home
```

```
echo "***** Running... Is ***** "
Is -I
echo "***** Printing Input files ***** "
echo "First file:"
cat $1 > >merge.out
echo "Second file:"
cat $2 >> merge.out
```

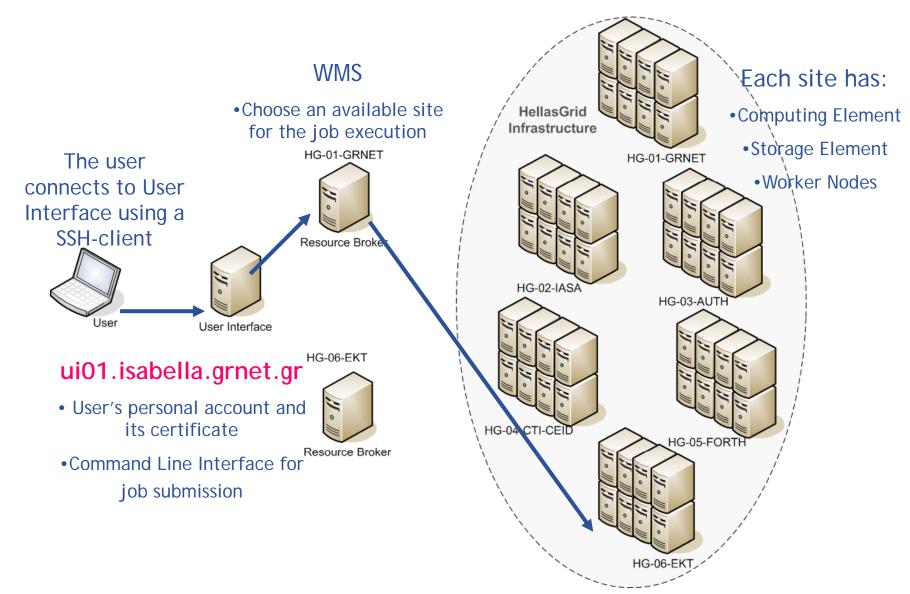

A simple JDL file

✓ [egee01@ui01 egee01]\$ less testJob1.jdl

```
Executable = "testJob1.sh";
Arguments = "fileA fileB";
StdOutput = "std.out";
StdError = "std.err";
InputSandbox = {"./testJob1.sh", "./fileA", "./fileB"};
OutputSandbox = {"std.out", "std.err", merge.out"}
```

Job execution

Job matching to CEs

Enabling Grids for E-sciencE

- Listing computing elements that match a job description
 - ✓ [egee01@ui01 egee01]\$ glite-wms-job-list-match -a testJob1.jdl
 Connecting to the service https://wms01.egee-see.org:7443/glite_wms_wmproxy_server

COMPUTING ELEMENT IDS LIST

The following CE(s) matching your job requirements have been found:

CEId

- ce01.afroditi.hellasgrid.gr:2119/jobmanager-pbs-hgdemo
- ce01.ariagni.hellasgrid.gr:2119/jobmanager-lcgpbs-hgdemo
- ce01.athena.hellasgrid.gr:2119/jobmanager-pbs-hgdemo
- ce01.isabella.grnet.gr:2119/jobmanager-pbs-hgdemo
- ce01.kallisto.hellasgrid.gr:2119/jobmanager-pbs-hgdemo
- ce01.marie.hellasgrid.gr:2119/jobmanager-pbs-hgdemo
- ce02.athena.hellasgrid.gr:2119/blah-pbs-hgdemo
- ce02.marie.hellasgrid.gr:2119/jobmanager-pbs-hgdemo
- glite-ce01.marie.hellasgrid.gr:2119/blah-pbs-hgdemo
- node001.grid.auth.gr:2119/jobmanager-pbs-hgdemo

Job submission

- Single Job submission
 - ✓ [egee01@ui01 egee01]\$ glite-wms-job-submit -o jobld -a testJob1.jdl
- Connecting to the service https://wms01.egee-see.org:7443/glite_wms_wmproxy_server

The job has been successfully submitted to the WMProxy Your job identifier is:

https://wms01.egee-see.org:9000/6INrYSPP4XfkgTYHuqHuww

The job identifier has been saved in the following file: /home/training/egee01/jobld

- ✓ glite-wms-job-submit –o jobld –r ce01.isabella.grnet.gr:2119/jobmanager-pbs-hgdemo -a testJob.jdl
 - -r: sends the job directly to the specified CE

Job status' retrieval

Retrieving the status of a job

✓ [egee01@ui01 egee01]\$ glite-wms-job-status -i jobld

BOOKKEEPING INFORMATION:

Status info for the Job: https://wms01.egee-see.org:9000/u-

SIc372Ny DQ04reimrHw

Current Status: Scheduled

Status Reason: Job successfully submitted to Globus

Destination: ce01.ariagni.hellasgrid.gr:2119/jobmanager-

lcgpbs-hgdemo

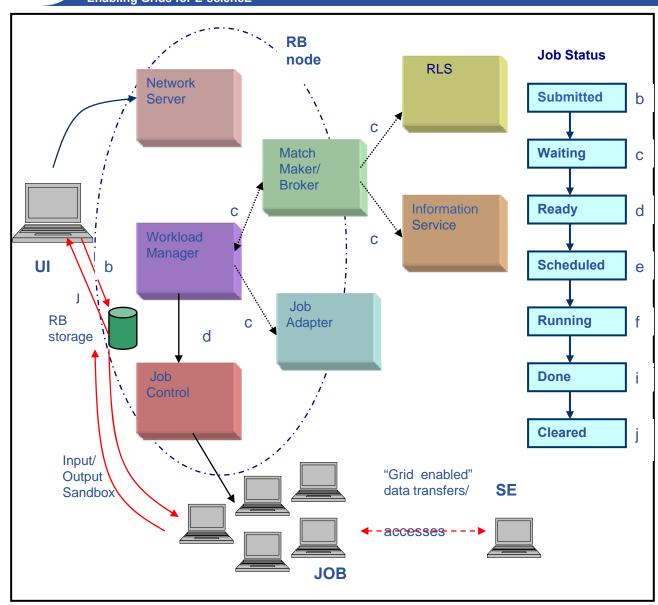

Submitted: Tue Sep 18 03:16:47 2007 EEST

į

✓ [egee01@ui01 egee01]\$ watch "glite-job-status -i jobld"
(To exit ctrl + C)

Job flow (1)

Job flow (2)

Enabling Grids for E-sciencE

- Job submission
 - The user logs in the UI and submits the job to a Resource broker.
 - If one or more files need to be copied from the UI to the WN, this is specified in the job description and the files are initially copied to the RB. This set of files is called the Input Sandbox
- Finding the proper CE
 - The WMS interrogates the Information Supermarket (ISM) (an internal cache
 of information read from the BDII), to determine the status of computational
 and storage resources.
 - The WMS interogates the File Catalogue to find the location of any required input files
- Job submission from the RB to the selected CE
 - The RB prepares a wrapper script that will be passed together with other parameters, to the selected CE.
 - Job status ⇒ READY
- Job arrival to the CE
 - The CE receives the request and sends the job for execution to the local LRMS.
 - Job status ⇒SCHEDULED

Job flow (3)

Enabling Grids for E-sciencE

Job submission to the Worker node

- The LRMS handles the execution of jobs on the local Worker Nodes.
- The Input Sandbox files are copied from the RB to an available WN where the job is executed.
- While the job runs, Grid files can be directly accessed from an SE using either the RFIO or gsidcap protocol
- Any new produced output files which can be uploaded to the Grid and made available for other Grid users to use. This can be achieved using the Data Management tools described later. Uploading a file to the Grid means copying it to a Storage Element and registering it in a file catalogue.
- Job status

 RUNNING

Job finished

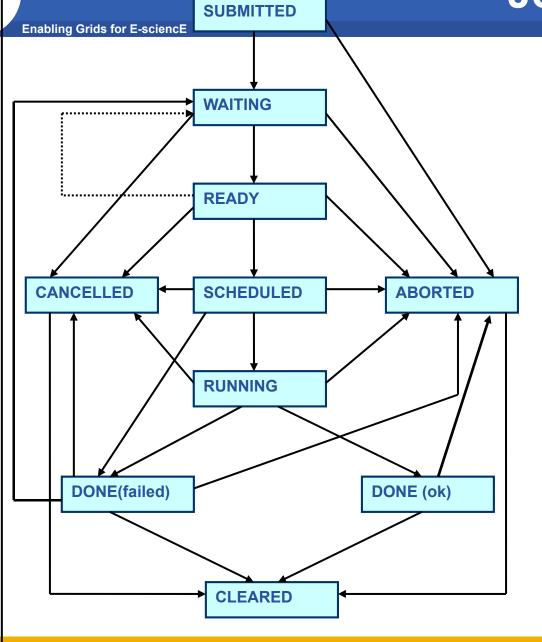

- If the job ends without errors, the small output files specified by the user in the Output Sandbox are transferred back to the RB node.

Output retrieval

- The user can retrieve the output files to the UI

Job status

Job cancelling

Cancelling a job

✓ [egee01@ui01 egee01]\$ glite-wms-job-cancel -i jobld

Are you sure you want to remove specified job(s) [y/n]y : y

Connecting to the service https://195.251.53.233:7443/glite_wms_wmproxy_server

The cancellation request has been successfully submitted for the following job(s):

- https://wms01.egee-see.org:9000/E_Ykk3oGFkXTQcDi_XZs5w

Output retrieval

- If the job's status is DONE, then its output can be copied to the UI with the commands:
 - ✓ [egee01@ui01 egee01]\$ glite-wms-job-output -i jobld

Connecting to the service https://195.251.53.233:7443/glite_wms_wmproxy_server

JOB GET OUTPUT OUTCOME

Output sandbox files for the job:

https://wms01.egee-see.org:9000/6INrYSPP4XfkgTYHuqHuww have been successfully retrieved and stored in the directory: /tmp/glite/glite-ui/egee01_6INrYSPP4XfkgTYHuqHuww

myhostname.c

```
#include <stdio.h>
#include <malloc.h>

#define BUF_SIZE 1000
int main( int argc, char *argv[]) {
    char *hostname;
    hostname = (char *) malloc(BUF_SIZE);
    gethostname(hostname,255);
    printf("host is %s\n",hostname);
    free(hostname);
    return 0;
}
```

→ Modify the testJob1.jdl to run the executable of this C program
 (Compile: gcc -o myhostname myhostname.c)

BuildandRun.sh

```
#!/bin/sh
gcc $1.c -o $1
./$1
```

- Compile myhostname.c on the CE itself.
- ⇒ Use a bash script to run the compiler and then run the executable (BuildandRun.sh)
- → Modify testJob1.jdl file so that the script
 "buildandrun.sh" is run with the parameter
 "myhostname"

Filenames(1)

Grid Unique Identifier (GUID)

- Identifies a file uniquely
- Example: guid:ab993b98-8bc9-4984-901e-91290276090c

Logical File Name (LFN) (User Alias)

- Refers to a file instead of a GUID
- Ifn:<any_string>
- LFC catalogue: lfn:/grid/<MyVO>/<MyDirs>/<MyFile>
- Example: Ifn:/grid/hgdemo/test_egee01/test_file

Storage URL (SURL) (Physical File Name-PFN)

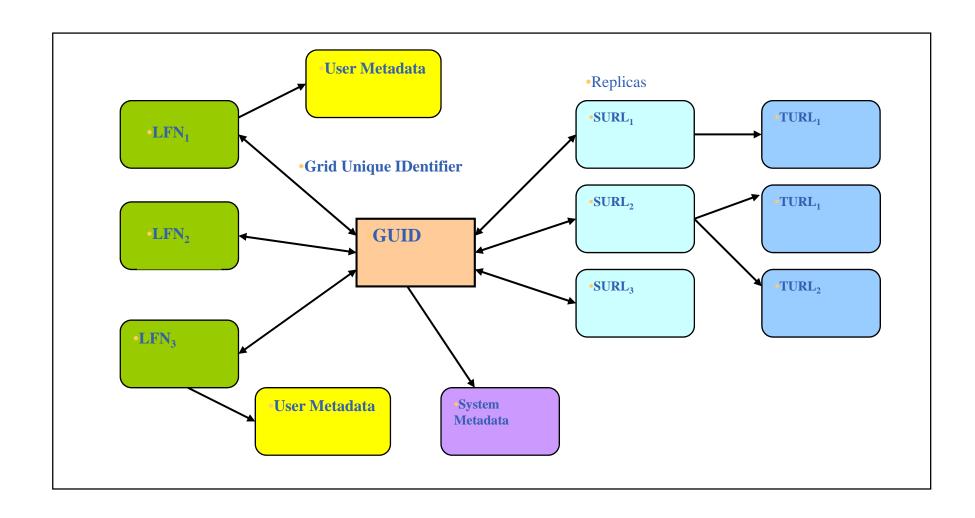

- Identifies a replica in a SE
- <sfn|srm>://<SE_hostname>/<some_string>
- Example: sfn://se01.isabella.grnet.gr/storage/hgdemo/generated/2007-04-20/filec4087974-dbaa-4890-91e2-3c105fa0a3df

Transport URL (TURL)

- A valid URI with the necessary information to access a file in a SE
- cprotocol>://<some_string>
- Example:gsiftp://se01.isabella.grnet.gr/storage/hgdemo/generated/2007-04-20/file1a08d327-d7dc-4d89-bb01-2c86f59eae37

Filenames(2)

File Catalogue

File Catalogue (gLite) or LCG File Catalogue

- Maintains mappings between LFNs, GUID, SURLs
- Local File Catalogue, holding only replicas stored at a given site
- Global File Catalogue, containing information about all files in the Grid
- Consists of a unique catalogue, where the LFN is the main key
- System metadata are supported

Grid file

- Physically present in a SE
- Registered in the file catalogue
- High Level Tools (Icg_util)

 Consistency between files in the SEs and entries in the file catalogue
- Low level Data Management tools

 Inconsistency between SEs physical files and catalogue entries

LFC commands

- Ifc-Is: List file / directory entries in a directory
- Ifc-mkdir: Create directory
- Ifc-chmod: Change access mode of a LFC file / directory
- Ifc-chown: Change owner and group of a LFC file / directory
- Ifc-In: Make a symbolic link to a file / directory
- Ifc-rename: Rename a file / directory
- Ifc-rm: Remove a file / directory
- Ifc-setcomment: Add / replace a comment
- Ifc-delcomment: Delete the comment associated with a file / directory

More advanced LFC commands

Enabling Grids for E-sciencE

- Ifc-getacl: Get file / directory access control lists
- Ifc-setacl: Set file / directory access control lists
- Ifc-entergrpmap: Defines a new group entry in the Virtual ID table
- Ifc-enterusrmap: Defines a new user entry in Virtual ID table
- Ifc-modifygrpmap: Modifies a group entry corresponding to a given virtual gid
- Ifc-modifyusrmap: Modifies a user entry corresponding to a given virtual uid
- Ifc-rmgrpmap: Suppresses group entry corresponding to a given virtual gid or group name
- Ifc-rmusrmap: Suppresses user entry corresponding to a given virtual uid or user name.

LCG Data Management Client Tools

Enabling Grids for E-science

- lcg_util tools
 - Allow users to copy files between UI, CE, WN and a SE
 - Allow users to register entries in the file catalogue and replicate files between SEs
- Replica Management
- lcg-cp: Copies a Grid file to a local destination (download)
- Icg-cr: Copies a file to a SE and registers the file in the catalogue (upload)
- lcg-del: Deletes one file (either one replica or all replicas)
- Icg-rep: Copies a file from one SE to another SE and registers it in the catalogue (replicate)
- lcg-gt: Gets the TURL for a given SURL and transfer protocol

LCG Data Management Client Tools

Enabling Grids for E-science

File Catalogue Interaction

Icg-aa: Adds an alias in the catalogue for a given GUID

Icg-ra: Removes an alias in the catalogue for a given GUID

Icg-rf: Registers in the catalogue a file residing on an SE

Icg-uf: Unregisters in the the catalogue a file residing on an SE

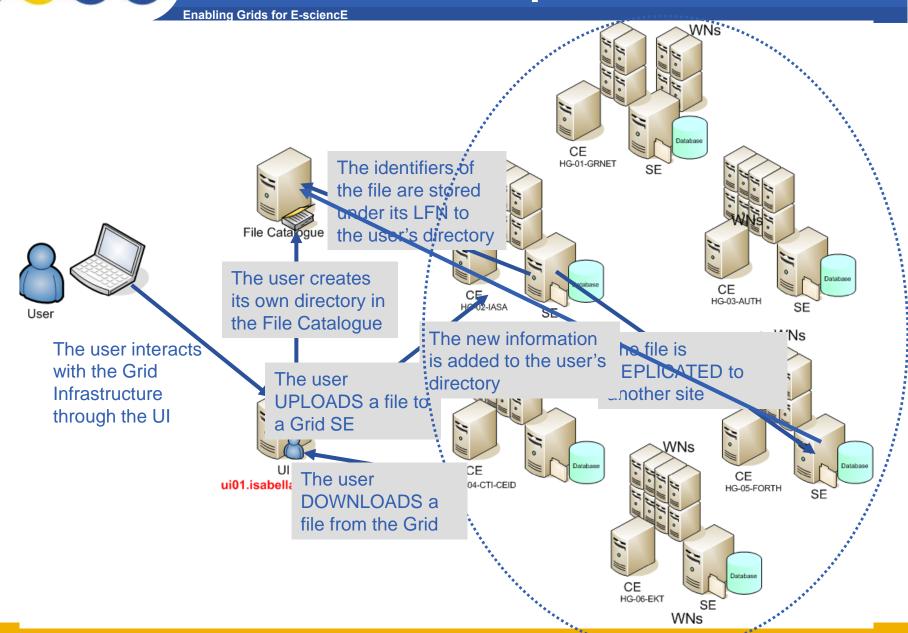

Icg-la: Lists the aliases for a given LFN, GUID or SURL

Icg-Ig: Gets the GUID for a given LFN or SURL

Icg-Ir: Lists the replicas for a given LFN, GUID or SURL

Operations on files

Configuration to use the LFC

Enabling Grids for E-science

- The LFC_HOST variable must contain the hostname of the machine providing the LFC service
- ✓ [egee01@ui01 egee01]\$ export LFC_HOST=`lcg-infosites --vo hgdemo lfc`
- ✓ [egee01@ui01 egee01]\$ export LCG_CATALOG_TYPE=Ifc
- The LCG_GFAL_VO variable must contain the name of the user's VO
- ✓ [egee01@ui01 egee01]\$ export LCG_GFAL_VO=hgdemo

Create a directory

- Creating a directory in the LFN namespace
 - ✓ [egee01@ui01 egee01]\$ Ifc-mkdir /grid/hgdemo/test_(\$USER)

where \$USER -> the username of each participant

- Listing the entries of a LFC directory
 - ✓ [egee01@ui01 egee01]\$ Ifc-Is -I /grid/hgdemo/ drwxrwxr-x 0 26158 32000 0 Apr 20 12:45 test_egee01
- Defining LFC_HOME variable to point to the created directory
- ✓ [egee01@ui01 egee01]\$ export LFC_HOME=/grid/hgdemo/test_(\$USER)
- Removing LFNs from the LFC
 - ✓ [egee01@ui01 egee01]\$ Ifc-rm -r Ifc:/grid/hgdemo/test_(\$USER)

Upload and replicate a file

Enabling Grids for E-sciencE

- Uploading a file to the grid with specific LFN and in a specific storage element
- ✓[egee01@ui01 egee01]\$ lcg-cr file:\$PWD/satimg.ppm -l lfn:satimg guid:e20d1fa9-e35f-426d-aa72-cb99b18c2791
- ✓[egee01@ui01 egee01]\$ Ifc-Is /grid/hgdemo/test_\$USER/satimg
- Replicating a file
- ✓[egee01@ui01 egee01]\$ lcg-rep -v lfn:satimg -d se01.afroditi.hellasgrid.gr

Using grid catalog type: Ifc

Using grid catalog: Ifc.isabella.grnet.gr

Source URL: Ifn:/grid/hgdemo/egee01_test/satimg

File size: 33985 VO name: hgdemo

Destination specified: se01.kallisto.hellasgrid.gr

Source URL for copy: gsiftp://se01.isabella.grnet.gr/storage/hgdemo/generated/2007-09-18/filee8e4acdf-dd25-49e4-

8ced-3d46aba13000

Destination URL for copy: gsiftp://se01.kallisto.hellasgrid.gr/se01.kallisto.hellasgrid.gr:/data02/hgdemo/2007-09-18/file5625a538-ecf7-4e87-b22b-8ef861e4b30d.172458.0

- Copying a file out of the Grid
- ✓ [egee01@ui01 egee01]\$ lcg-cp -t 100 lfn:satimg file:\$PWD/copy_satimg

File management operations (1)

Enabling Grids for E-sciencE

- Listing replicas
- ✓ [egee01@ui01 egee01]\$ lcg-lr --vo hgdemo lfn:satimg

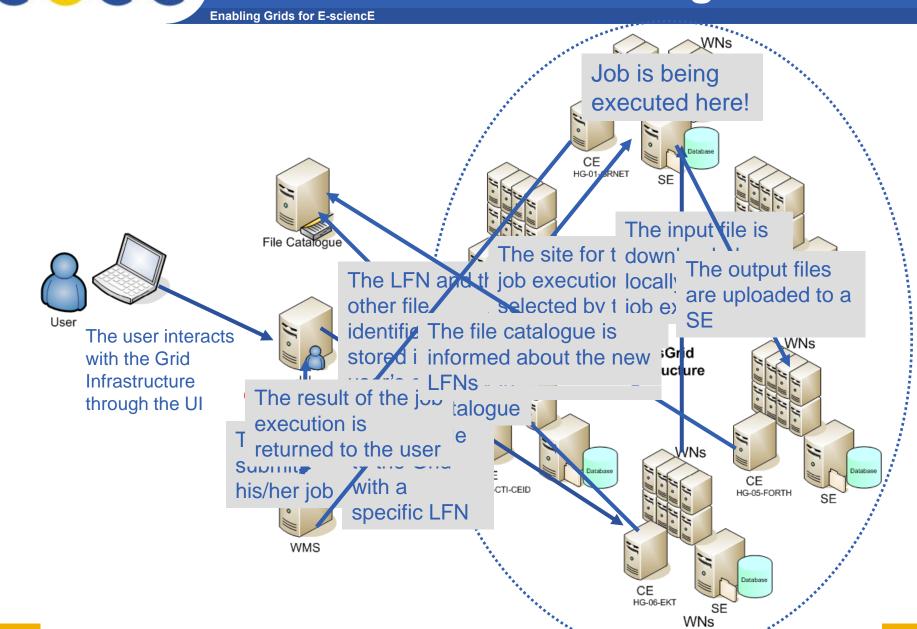

sfn://se01.isabella.grnet.gr/storage/hgdemo/generated/2007-09-18/filee8e4acdf-dd25-49e4-8ced-3d46aba13000

srm://se01.kallisto.hellasgrid.gr/dpm/kallisto.hellasgrid.gr/home/hgdemo/generated/2007-09-18/file5625a538-ecf7-4e87-b22b-8ef861e4b30d

- Listing guids given the Ifn
 - ✓ [egee01@ui01 egee01]\$ lcg-lg lfn:Satimg quid:e20d1fa9-e35f-426d-aa72-cb99b18c2791
- Adding metadata information to LFC entries
 - ✓ [egee01@ui01 egee01]\$ Ifc-setcomment /grid/hgdemo/test_(\$USER) /satimg "Created for the training"
- View metadata of a specific file
 - ✓ [egee01@ui01 egee01]\$ **Ifc-Is --comment /grid/hgdemo/test_(\$USER)/satimg** satimg Created for the training
- Removing metadata information to LFC entries
 - ✓ [egee01@ui01 egee01]\$ Ifc-delcomment /grid/hgdemo/test_\$USER/satimg

Job interacting with files

A simple job with data management

Enabling Grids for E-science

- ✓ [egee01@ui01 egee01]\$ less testJob2.sh
- #!/bin/sh

```
echo Information about the Worker Node
echo Running at 'hostname'
echo Date 'date'
echo Enabling the executable flag for the application
chmod 755 $PWD/compressipeg
echo Fetching data from a Storage Element
lcg-cp --vo hgdemo $1 file:$PWD/local copy
echo Runnning executable of the user taking as input the transferred file
$PWD/compressipeg local copy > local compressed copy
echo Convert to jpeg Unix command
pnmtojpeg local copy > local copy jpeg
Is -al
echo Registering output to the Storage Elements
lcg-cr --vo hgdemo -l $2 file:$PWD/local compressed copy
lcg-cr --vo hgdemo -l $3 file:$PWD/local copy jpeg
echo Job is done!
```

A simple JDL file

Enabling Grids for E-sciencE

```
[egee01@ui01 egee01]$ less testJob2.jdl
    Type = "job";
    JobType = "normal":
    RetryCount = 0:
    ShallowRetryCount = 3;
    Executable = "testJob2.sh";
    Arguments = "Ifn:/grid/hgdemo/test (username)/satimg lfn:/grid/hgdemo/te
st (username)/satimgjpg lfn:/grid/hgdemo/test (username)/greysatimg";
    InputSandbox = {"file:///home/training/(username)/testJob2.sh", "file:/
//home/training/(username)/compressipeg"};
    StdOutput = "std.out";
    StdError = "std.err";
    OutputSandbox = {"std.out", "std.err", "local copy jpeg"};
    DataRequirements = {
         [InputData = {"Ifn:/grid/hgdemo/test (username)/satimg"};
          DataCatalogType = "DLI";]
    };
    DataAccessProtocol = {"gsiftp", "https"};
```

Upload a file again!

- Uploading a file to the grid with specific LFN and in a specific storage element
- ✓ [egee01@ui01 egee01]\$ lcg-cr file:\$PWD/satimg.ppm -l lfn:satimg guid:594cf6b5-e3b7-49b5-a916-0d5e3054af17
- ✓ [egee01@ui01 egee01]\$ Ifc-Is /grid/hgdemo/test_(\$USER)/ satimg

Job execution and data retrieval (1)

Enabling Grids for E-science

Submit job
 glite-wms-job-submit -o jobld2 –a testJob2.jdl

Watch the job status
 watch "glite-wms-job-status -i jobld2"

 Retrieve the job output glite-wms-job-output -i jobld2

Listing the entries of a LFC directory

[egee01@ui01 egee01]\$ Ifc-Is -I /grid/hgdemo/test_(\$USER)

```
-rw-rw-r-- 1 26259 32000 1438745 Nov 04 22:36 greysatimg
-rw-rw-r-- 1 26259 32000 14110553 Nov 04 22:32 satimg
-rw-rw-r-- 1 26259 32000 1521142 Nov 04 22:36 satimgjpg
```

Job execution and data retrieval (2)

Enabling Grids for E-science

Listing the entries of a LFC directory

```
[egee01@ui01 egee01]$ lcg-lr --vo hgdemo lfn:satimgjpg
[egee01@ui01 egee01]$ lcg-lr --vo hgdemo lfn:greysatimg
```

Download output files

```
[egee01@ui01 egee01]$ lcg-cp -t 100 lfn:satimgjpg file:$PWD/local_satimgjpg
[egee01@ui01 egee01]$ lcg-cp -t 100 lfn:greysatimg file:$PWD/local_greysatimg
```

JDL file for parametric job

Enabling Grids for E-sciencE

```
Type = "job":
       JobType = "Parametric";
       Parameters = N;
       ParameterStart = 1:
       ParameterStep =1;
      RetryCount = 0;
       ShallowRetryCount = 3;
       Executable = "testJob2.sh";
       Arguments = "Ifn:/grid/hgdemo/test (username)/satimg PARAM Ifn:/grid/hg
  demo/test (username)/satimgjpg PARAM Ifn:/grid/hgdemo/test (username)/greysatim
  g_PARAM_";
       InputSandbox = {"file:///home/training/(username)/testJob2.sh", "file:/
  //home/training/(username)/compressjpeg"};
       StdOutput = "std.out";
       StdError = "std.err";
       OutputSandbox = {"std.out", "std.err", "local copy jpeg"};
        DataRequirements = {
       [InputData = {"Ifn:/grid/hgdemo/test (username)/satimg PARAM ",
  "Ifn:/grid/hgdemo/test_(username)/compressjpeg"};
            DataCatalogType = "DLI";]
       };
DataAccessProtocol = {"gsiftp", "https"};
```

Upload files again!

- Uploading file to the grid with specific LFN and in a specific storage element
- ✓ [egee01@ui01 egee01]\$ lcg-cr file:\$PWD/satimg1.ppm -l lfn:satimg1 -d se01.isabella.grnet.gr

guid:594cf6b5-e3b7-49b5-a916-0d5e3054af17

. . .

All three subimages must be uploaded

✓ [egee01@ui01 egee01]\$ Ifc-Is /grid/hgdemo/test_ (\$USER) /

satimg

satimg1

satimg2

satimg3

Job execution

- Submit job glite-wms-job-submit -a -o parametric-ids.txt parametrictestJob.jdl
- Watch the job status
 watch "glite-wms-job-status -i parametric-ids.txt"
- Retrieve the job output glite-wms-job-output -i parametric-ids.txt

Delete Grid files and LFC entries

Enabling Grids for E-scienc

- Deleting all replicas with the specific Ifn
 - ✓ [egee01@ui01 egee01]\$ lcg-del -a lfn:satimg
 - ✓ [egee01@ui01 egee01]\$ lcg-lr --vo hgdemo lfn:satimg lcg_lr: No such file or directory

- Delete LFC directory
 - ✓ [egee01@ui01 egee01]\$ Ifc-Is /grid/hgdemo/test_(\$USER)
 - ✓ [egee01@ui01 egee01]\$ Ifc-rm -r /grid/hgdemo/test_(\$USER)
 - ✓ [egee01@ui01 egee01]\$ **Ifc-Is** /**grid/hgdemo/**

Thank you!
