

Setting up FLUKA for the 1st Day:

Open a terminal (KDE button -> search for **konsole**).

Inside the terminal, change to your home directory:

cd

With emacs (or another editor like gedit) open in your home directory the file `.bashrc`:

emacs .bashrc or
gedit .bashrc

In this file enter following following lines and save the file:

module load fluka/2011.2c.2
export FLUFOR=gfortran
export PATH=\${PATH}:\${FLUPRO}:\${FLUPRO}/flutil

Execute on the command line:

source .bashrc
