Search for new physics phenomena with heavy flavour quarks in ATLAS

Monday 4 July 2016 15:20 (20 minutes)

ATLAS has a wide programme of activities in B-physics. The results of studies in the electro-weak sector and beyond SM searches will be discussed, including CP violation and mixing in the $B_{0,s}$ and B_0 systems, rare decay of $B_{0,s}$ to muon pairs, and angular correlations in the decay of B_0 to $K^*0 \mu^+\mu^-$.
